

Accountant			
General Information			
Description – what is this occupation?			
In a company, the accountant is at the focus of all business activities. The main responsibility of an accountant is to analyse and evaluate financial information and to effectively communicate the results to senior management to enable them to make good business decisions.			
Typical Job Activities – what will I do in this occupation?			
Very often the accountant is part of the senior management team, in which case you will use the information to make decisions, convince your senior management colleagues of a certain course of action and then implement that action. The services of a well-qualified accountant are indispensable in modern business world as you provide the knowledge and skills that enable businesses to run effectively. This pivotal role in business is the reason that many accountants rise quickly to senior management positions. Chartered accountants, because of their rigorous training, are most in demand. Accounting graduates with lower qualifications will probably work as accounting officers and will not usually rise to the same levels of seniority. Accountants can specialise in any one of the following fields of accountancy: Auditing, pure accounting, taxation, legal accounting, financial accounting, management accounting, computer accounting, cost and management accounting.			
Related Occupations – which occupations are more or less the same?			
- Actuary - Assessor - Auditor - Bank official - Bookkeeper - Chartered accountant - Cost and management accountant - Financial analyst - Financial consultant - Loan officer - Marketing manager - Valuer/Appraiser

I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I can work with numbers		

Acrobat			
General Information			
Description – what is this occupation?			
Acrobats normally have a gymnastics background but if not, they can be taught			
Typical Job Activities – what will I do in this occupation?			
There are various levels associated at the absolute beginner's levels. Acrobats are taught how to do basic forward and back rolls, cartwheels, handstands and how to use spring boards and trampettes. Beginners and beginner/intermediate acrobats practise the same movements as absolute beginners, they only do it a little faster. Intermediate acrobats are able to do a back flip. Advanced acrobats are able to link various moves together and the aim of these acrobats is to improve on their technique and line. Acrobatic balancing is when two or more people work together. One acts as a "base" and the other balances on top of that person. Acrobats are also able to juggle with balls, clubs, rings on their own or in groups walk on stilts and unicycle. Acrobats need to be extremely fit and agile and it takes lots of hard work to become an advanced acrobat.

Actor			
General Information			
Description – what is this occupation?			
An actor uses speech, make-up, costumes and gestures to portray characters on stage, in films, television and radio productions.			
Typical Job Activities – what will I do in this occupation?			
A great deal of the actor's time is taken up by rehearsals where movements, gestures, vocal skills, facial expressions and other acting techniques are practised and repeated under the supervision of directors. An actor may be involved in the following fields of acting: - Live theatre: The actor makes great use of exaggerated movements and voice-projection. - Film and television: More subtle body movements and facial expressions are used for the close-up angle of the camera. - Radio production: The actor uses voice-modulation and intonation in order to create the desired expression. - Education: The actor uses skills learnt to convey important information to the audience in an effective way. - Industrial theatre: This form of theatre is unique to South Africa. The actor communicates in different environments (factory floors, boardrooms, hills, and beaches, next to campfires) with a diverse society. You have to be funny, lively and empathic. You also need to be able to improvise, include local jokes and issues and speak the language of the audience. The acting techniques may depend on the type of role the actor plays. Different skills are required for a comedian and the interpretation of serious dramatic roles. Versatility in all areas of dramatic performance and dancing and singing skills create more employment opportunities. To find work as an actor, you will have to attend auditions where you demonstrate your acting ability to those in charge. Before you can contact a television or radio station, e.g. the SABC or M-Net, you must register with a casting agent. If hired, you will have to attend long rehearsals and memorise lines and cues. In addition, you may have to attend special classes (in dancing or singing, for example) if this is required for the part. Travel may be required when plays go on tour or film productions are shot.			
Related Occupations – which occupations are more or less the same?			
- Art editor and critic - Dancer - Drama teacher - Industrial theatre producer - Producer - Radio announcer - Television presenter - Writer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less on the job training

Entry to Tertiary or Further Studies			
Grade 12 with exemption for University studies or grade 12 for Technikons			
Entry to Work Place			
Skill, experience, referrals, success with auditions			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An actor should: - have acting talent; - be creative and imaginative; - be ambitious and willing to continue through long periods of unemployment; - be able to learn lines and movements easily; - express him well by using facial expressions, gestures and voice inflections; - be committed to his vocation; - be able to follow the directions of others and take criticism well; - have good health, physical strength and stamina (lights are hot, hours are long, and work may be physically demanding); - have a clear, well-trained voice; - have photogenic features (look well) for films and television.

Actuary			
General Information			
Description – what is this occupation?			
The actuary is an expert in the theory and practice of statistics, and specifically those of mortality, sickness, retirement and unemployment			
Typical Job Activities – what will I do in this occupation?			
As an actuary, you will work mostly with numbers and figures. You will devise, compile and develop life insurance policies, pension and medical aid schemes and perform other specialised functions mainly relating to the insurance industry. You will also deal with investments of life insurance companies, for example the investment of money in government stock, mortgage bonds, ordinary and preference shares, property and other securities. A considerable amount of an actuary's time is devoted to the evaluation of a company's liabilities in respect of all policies.			
Related Occupations – which occupations are more or less the same?

Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics (HG 80%+), English (60%+), Two other subjects (70%+) RECOMMENDED SUBJECTS: None			
Entry to Work Place			
TRAINING AS ACTUARY: No South African academic institution offers a complete and qualifying training course for actuaries. To qualify as an actuary one must pass the examinations set by the Institute or the Faculty of Actuaries. These professional bodies are situated in London and Edinburgh respectively. The Actuarial Education Service has offices based in Cape Town and Johannesburg and manages all matters relating to these examinations.			
Studies are done through correspondence and there is no appointed period for completing the examinations. This seldom takes less than five years, although a few actuaries have taken as little as two years. During this time the actuarial student will normally be employed by a life assurance company or firm of consulting actuaries			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An actuary should: - have good judgement and decision-making skills; - be able to work well with others; - communicate his ideas both in speech and in writing; - have an interest and above average ability in mathematics; - have illogical and creative mind.

Acupuncturist			
General Information			
Description – what is this occupation?			
The acupuncturist treats patients with ailments by inserting needles of various lengths into their bodies at various points			
Typical Job Activities – what will I do in this occupation?			
As an acupuncturist, you will first consult with the patient to establish his medical history and if he has consulted a traditional doctor, the problems that have been diagnosed, and then apply your knowledge of acupuncture to determine the points at which the needles should be inserted. Each point is believed to be effective in the treatment of a different ailment. The needles are left in the body for a specified time, according to the ailment being treated, and then removed. Acupuncture is an ancient Chinese art and is a branch of holistic medicine. It is used in the treatment of ailments such as arthritis, hypertension and ulcers, when patients seek an alternative to traditional medicine. People seeking to cure themselves of addictions such as smoking and taking drugs and those wanting to lose weight often consult an acupuncturist.			
Related Occupations – which occupations are more or less the same?

Administrative Assistant			
General Information			
Description – what is this occupation?			
Administrative assistants perform a variety of tasks necessary to ensure that businesses and organisations run smoothly			
Typical Job Activities – what will I do in this occupation?			
They may be required to carry out numerous tasks in a small office, or to concentrate on just one or two specific tasks in a larger office. The specific duties assigned to an administrative assistant or clerk vary significantly, depending upon the type of office in which he works. An office clerk in a doctor's office, for example, would not perform the same tasks as a clerk in a large financial institution or in the office of an auto-parts wholesaler. Administrative assistants or clerks usually work indoors, and may work alone or in a team situation with other clerks, professional and technical staff. Experienced administrative assistants may undertake more complex tasks and responsibilities. Administrative assistants may perform the following tasks: - sort and distribute incoming mail to areas and staff within the organisation, and dispatch outgoing mail; - answer telephone enquiries from customers, attend to visitors; - give out information or arrange to send it; - operate a range of office machines such as photocopiers, computers and facsimile machines; - handle orders and check and store incoming goods; - file papers and documents so that they can be easily found when needed; - send out invoices; - write business letters, reports or office memoranda using word-processing equipment; - undertake other duties such as banking, credit control or payroll functions; - make travel arrangements.			
Related Occupations – which occupations are more or less the same?			
- Bank officer - Public servant - Receptionist - Recruitment Officer - Secretary or personal assistant

Technology		Direct consumer demands – “man in the street”			My own performance and skills	
Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Adult Educator			
General Information			
Description – what is this occupation?			
There are essentially four different areas in which an adult educator works			
Typical Job Activities – what will I do in this occupation?			
- Professional development: Qualified workers are taught new approaches, informed of new developments and legislation or shown how to improve certain aspects of their jobs. Large corporations often perform this type of adult education through their established training departments. The adult educator working in this area is usually an expert. - Adult basic education and further study: Adults attend literacy classes and study part-time or full-time to improve their qualifications. Such courses are offered by community centres, religious institutions, non-governmental organisations geared to this purpose, professional institutes, business colleges, universities and technical (FET) colleges. Literacy may be taught by anyone who is competent in the language being used and who has a teaching ability (primary school teachers are ideally suited to this task). High school teachers are needed to prepare students for Grade 10 or Grade 12 (matric). If you want to teach career related courses you need to have passed the courses yourself and have worked in the appropriate fields. - Skills development: Skills training ranges from personal growth skills, such as assertiveness and time management, to skills required for economic survival, such as home industries and job hunting. People in the caring professions (nurses, social workers and psychologists) are ideally suited to carry out this type of training. - Enrichment: People join classes in subjects such as dancing, flower-arranging and creative writing purely for personal enrichment. The adult educator in this area is a person who has made a special study of a subject or who has achieved success or recognition in a particular field.			
Related Occupations – which occupations are more or less the same?			
- Counsellor - Public relations officer - School administrator - School teacher			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Schooling requirements vary depending on the type of adult education: - An adult educator in professional development needs to be appropriately qualified and the requirement to enter courses for these qualifications is either Senior Certificate or Senior Certificate with matric exemption, depending on the course. - A Senior Certificate is recommended for the educator who wishes to specialise in basic adult education and further study and skills development, but it is not essential. - The adult educator who wants to teach enrichment courses will be expected to show samples or portfolios of his work rather than qualifications.			

Entry to Work Place			
none			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An adult educator should: - have teaching ability; - be an expert in the field in which he is teaching; - have empathy with the aspirations and difficulties of adults who want to improve themselves through education; - have patience and good communication skills.

Advertising Media Planner/Buyer			
General Information			
Description – what is this occupation?			
The advertising media planner/buyer decides on the most effective way of advertising a product and then negotiates to buy the advertising space or time required			
Typical Job Activities – what will I do in this occupation?			
If working as an advertising media planner/buyer, you will study the market and select the most appropriate advertising medium (for example TV, radio, the Internet, newspapers, magazines), aiming to reach the maximum number of people at the minimum cost. The advertising media planner/buyer bases the choice of medium on research data and on the available budget. You then make a deal, often competing with other buyers. You will work closely with others in the advertising team. Large agencies have planners and buyers, but in smaller companies the work is combined and dealt with by a media executive.

Advocate			
General Information			
Description – what is this occupation?			
An advocate conducts civil and criminal cases in various courts of law by appearing either for a defendant or a plaintiff in a civil case, or for the State or an accused in a criminal case.			
Typical Job Activities – what will I do in this occupation?			
Civil action results when the private interest of two parties or persons causes a dispute but where the State and its laws have not directly been violated or affected. Examples are claims for damages, disputes over contracts, insurance claims, divorce cases, etc.			
A criminal case is instigated by the State against someone who has allegedly violated or committed an offence against the law of the country.			
Clients do not generally contact an advocate directly, but are referred by an attorney who puts the client's case to the advocate with all the relevant information.			
The advocate plays an important role by ensuring that all the evidence in favour of the client is placed before the magistrate or judge and by testing the version of the opposing party through cross-examination.			
Related Occupations – which occupations are more or less the same?			
- Attorney/lawyer - Judge - Legal adviser - Magistrate - Patent attorney - State advocate - State attorney - State prosecutor			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Languages			
Entry to Work Place			
ADDITIONAL REQUIREMENTS: Before an advocate may practise, he is admitted as an advocate by the Supreme Court. He may, and usually does, also apply to join a Bar which is a society of practising advocates for a particular area or province. This pupillage period lasts for 4 months. After pupillage the advocate is expected to write an examination, and if successful, he is admitted as an advocate			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An advocate should: - have integrity; - be honest; - be able to inspire confidence; - think quickly and analytically; - be able to speak clearly and authoritatively.

Aerobics Instructor			
General Information			
Description – what is this occupation?			
The aerobics instructor instructs groups of people in aerobics and calinethics. Your main responsibility is to demonstrate exercise movements and ensure that each person in the class performs them correctly.			
Typical Job Activities – what will I do in this occupation?			
Aerobics classes usually comprise mixed groups of beginners and advanced exercisers. The instructor needs to ensure that beginners are given sufficient attention without disrupting the momentum of the class required by the advanced exercisers. Beginners often perform the exercises incorrectly, rendering them ineffective or placing themselves at risk of injury. It is the instructor's responsibility to demonstrate the correct movements. You have to pay close attention to each person's breathing since this is an important aspect of aerobic exercise. The instructor is responsible for motivating and encouraging groups to get the greatest benefit from their session. As an aerobics instructor you provide your own music and gymnasium owners and managers depend on you to create a good 'vibe' so as to keep people coming back to the classes.			
Related Occupations – which occupations are more or less the same?			
- Biokineticist - Dancer - Personal trainer (fitness) - Physiotherapist - Referee - Sport advancement officer - Sport manager - Sportsman (professional) - Teacher (physical education)			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
No specific high school requirements is necessary to enter this career. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: None			
Entry to Work Place			
none			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An aerobics instructor should: - have a passion for physical activity; - have organisational ability; - be able to work with groups of people; - be able to encourage and motivate; - have teaching ability.

Agricultural Extension Officer			
General Information			
Description – what is this occupation?			
The primary responsibility of an agricultural extension officer is to keep farmers informed in respect of new developments in the agricultural sector			
Typical Job Activities – what will I do in this occupation?			
The agricultural extension officer encourages the farmer to adopt new, improved methods of farming. As an agricultural extension officer you will use a variety of methods to reach the farmer e.g. by organising study groups for farmers, 'farmer days', demonstrations, lectures and literature, as well as informing the media. You will also make personal visits to farmers to discuss new developments. An agricultural extension officer also propagates farming and development programmes aimed at reaching marginalised farmers or those who have little access to information and extension services. You will do this in collaboration with farming communities, helping them to help themselves to become more self-reliant and independent.			
Related Occupations – which occupations are more or less the same?

Agricultural Technician			
General Information			
Description – what is this occupation?			
The agricultural technician concentrates on the practical aspects of agriculture.			
Typical Job Activities – what will I do in this occupation?			
An agricultural technician assists agriculturists and farmers with a variety of tasks related to different aspects of agriculture. These include planning, research and the application of agricultural knowledge. You will help farmers to make the best use of their land without damaging it. You may, for example, suggest terracing land in the event of erosion or growing hedges to act as windbreaks. The agricultural technician serves as a technical adviser to soil and water conservation committees. You will also assist veterinary surgeons and guide farmers in the treatment of diseases and the general handling of animals. You will instruct the farmer on how to classify and grade animal skins, wool and mohair. There are different types of agricultural technicians: - The agricultural research technician assists the agricultural researcher with research projects in the following fields: Botany, agricultural microbiology, analytical chemistry, zoology, veterinary science, food technology, agricultural meteorology and soil science. - The agricultural extension technician collects information to identify shortcomings in the farming industry and the misuse of resources. As an agricultural extension technician you will advise farmers on specific farming methods. - The agricultural resource technician is concerned with the classification and mapping of a region's natural resources and the planning of farms. Some engineering technicians are also involved in the agricultural industry.			
Related Occupations – which occupations are more or less the same?			
- Agricultural engineering technician - Agricultural extension officer - Agronomist - Animal scientist - Farmer - Fish breeder - Forester - Horticulturist			
Educational Requirements - which qualifications do I need to enter this occupation?

Agriculturist			
General Information			
Description – what is this occupation?			
The agriculturist is a scientist. As an agriculturist, you will apply your knowledge of agriculture to improve production and the means of production.			
Typical Job Activities – what will I do in this occupation?			
You will use the information processed by agricultural scientists to advise farmers on farming methods. You may also be involved in agricultural research. Agriculture includes crop science and animal science. The agriculturist concerned with crop science investigates field crop problems and develops new and improved growing methods to obtain higher yields or better quality. You may specialise in a specific crop, groups of crop, production, weed and pest control or irrigation. The agriculturist concerned with animal science conducts research on animals, and develops scientific methods of breeding, caring for and managing farm animals. You may specialise in certain types of animals, their breeding, physiology or nutrition or the products of animals such as meat, butter or eggs.			
Related Occupations – which occupations are more or less the same?			
- Adviser: farming - Agricultural adviser: consultant - Agricultural chemist - Agricultural engineer - Agricultural engineering technologist - Agricultural researcher - Agricultural scientist - Agricultural technician - Animal anatomist - Botanist - Dairy scientist - Farmer - Nature conservationist - Poultry scientist - Silviculturist - Veterinary technologist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma or BTech degree. Grade 9 Certificate (preference is given to a Senior Certificate) for a diploma at an agricultural college. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology, Economics			

Entry to Work Place			
AGRICULTURAL COLLEGE: Agricultural Colleges also offer training in different areas of agriculture. Subjects that can be taken are: Biochemistry, Agronomy, Botany, Chemistry, Physics, Entomology, Soil Science, Genetics, Pomology, Agricultural Meteorology, Zoology, Horticulture, Plant Pathology and Poultry Science Studying at an Agricultural College will not lead to registration as an Agriculturist			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An agriculturist should: - be interested in soil, plants and animals; - have an aptitude for biology; - be able to communicate with people; - be practical; - display scientific interest; - be enthusiastic and responsible; - have perseverance.

International Employment Market What is the chance of being able to use this career's qualifications and skills in the international labour market?			
Exceptionally High	High	Moderate	Low

Possible Employers – where do I find this occupation?						
Government (national, provincial, local councils and government related organisations like universities, semi-government, etc.	Big private companies	Medium or small companies	Own small business: Entrepreneurial opportunities in this field	Self-employed: Contractor, consultant, own practise, freelance		
- Department of Land Affairs - Commercial organisations such as manufacturers of agricultural remedies and food companies - Industrial companies - Government and private research institutes - Colleges and universities - SABS - Control boards - Agricultural unions - Co-operatives - Large farming undertakings - Self-employment (agricultural consultant) - Organisations like the CSIR and National Parks Board.						
Relevant Contact Details – where can I get more information on this occupation?						
Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Experience in related fields	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities			The growth of private companies (big and small)	
Technology		Direct consumer demands – “man in the street”			My own performance and skills	

Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I can work outdoors		

Agronomist			
General Information			
Description – what is this occupation?			
Agronomy is the science of the growing of crops and the agronomist must develop and implement production systems with the aim to have maximum economical production without harming the environment			
Typical Job Activities – what will I do in this occupation?			
The agronomist investigates field-crop problems and develops new and improved growing methods for higher yields or better quality. As an agronomist, you will advise farmers about the best crop and cultivar, crop rotation, fertilisers, field drainage, irrigation and harvesting techniques and provide information on plant diseases, weed killers and the biological control of insect pests. An agronomist may also become a representative of a manufacturer and show farmers the most effective uses of new agricultural products. You may have to travel to neighbouring countries to help the local farmers increase their food production by means of new techniques. You may also work on developing new types of grain, legumes and grasses with techniques that will increase and improve food production and help replenish the soil.			
Related Occupations – which occupations are more or less the same?			
- Agriculturist - Biologist - Botanist - Chemist - Farmer - Horticulturist - Viticulturist - Wine-maker			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology, Geography			
Entry to Work Place			
none			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An agronomists should: - be interested in soil and plants; - enjoy working outdoors; - display scientific interest; - have an aptitude for biology; - be able to communicate with people; - be flexible and adjust well to change; - be practical; - be enthusiastic and responsible; - have perseverance.

Air Cabin Crew			
General Information			
Description – what is this occupation?			
The cabin crew or attendant helps to make the passengers' flight as safe, comfortable and enjoyable as possible.			
Typical Job Activities – what will I do in this occupation?			
The cabin attendant has to: - attend the captain's pre-flight briefing - make sure the passenger cabin is in order - make sure that supplies of food, beverages, blankets and reading material are adequate - check safety equipment and first aid kits. As passengers arrive, the cabin attendant welcomes them, checks their tickets, directs them to their seats and assists passengers with special needs. Before take-off the cabin attendant demonstrates how to use emergency equipment. During the flight you will provide passengers with drinks and refreshments. After landing you will assist the passengers to leave the airplane and thank them for making use of the services of the airline. The cabin attendant has to work an average of 110 hours per month on domestic flights and 90 hours on international flights. An annual free pass by air or rail as well as reduced tariffs on overseas flights are part of the fringe benefits.			
Related Occupations – which occupations are more or less the same?			
- Customer service agent - Nurse - Public relations officer - Tourist guide - Travel agent - Waiter - Wine steward

Air-traffic Controller			
General Information			
Description – what is this occupation?			
The air-traffic controller keeps airport traffic flowing smoothly, safely and efficiently. The air-traffic controller gives pilots instructions based on information received from equipment (such as the radar), other controllers, the weather bureau, airline pilots and other sources.			
Typical Job Activities – what will I do in this occupation?			
In airport control the air-traffic controller is concerned with all aircraft moving on the surface of the airport and all aircraft taking off and landing during good weather conditions. In approach control you will give instructions during bad weather conditions to incoming aircraft until the runway is in sight and to departing aircraft until level flight is reached. In airway control, instructions to pilots ensure that safe distances between aircraft are maintained. Several air-traffic controllers handle a plane during take-off and landing: - Before landing and take-off the local controller informs the pilot of the weather conditions and also gives the pilot runway clearance. - The controller in the radar room directs the pilot to the runway if the airport is not busy. - The controller in the tower, which is above the radar room, is responsible to guide and monitor the aircraft further on the runway and to delay any departures that may interfere with the plane's landing. - When the aircraft has landed the ground controller in the tower directs the plane along the taxiways to its assigned gate. - When the aircraft is in the air, the plane is guided out of the airport's airspace by the departure controller. - An en route controller monitors the aircraft route from one airport to the next.			
Related Occupations – which occupations are more or less the same?			
- Aeronautical information service clerk - Airline dispatcher - Airline-radio operator - Assistant surveyor - Air cabin attendant - Navigator			
Educational Requirements - which qualifications do I need to enter this occupation?

Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Physical Science, Geography.			

Entry to Work Place			
AIR TRAFFIC AND NAVIGATION SERVICES (ATNS) COLLEGE: The ATNS College is situated at Johannesburg International Airport. The training programme consist of the following courses: 1. Primary Course: Primary Courses 1and 2 (practical and theoretical). The successful trainee is then moved to a particular aerodrome for further on-the-job training. After the Primary Course 3 exam the candidate is employed as an air-traffic service assistant. 2. Aerodrome Course: To qualify for the Aerodrome course students need to have passed the primary course and have at least one year practical experience as an air traffic service assistant. - Theoretical training: 8 weeks at the ATNS College. - Practical Training: 150 hour practical aerodrome control training where the student works under the close supervision of a training officer. - Duration of course: 1 year On completion of this course the air-traffic service assistant will become an air-traffic controller, specialising in aerodrome control. 3. Control Course: The student who enrolls for this course must have at least one year experience as an aerodrome air-traffic controller. - Theoretical training: 12 weeks at the ATNS College during which the intricacies of approach control, area control and radar will be taught. - Practical training: At an airfield under the supervision of a training officer. - Duration of course: 1 year If the student is successful in the examination of the control course he may register as a professional air-traffic controller. The professional air-traffic controller may work as an area, approach or radar controller. ADDITIONAL REQUIREMENTS: An air-traffic controller must pass yearly physical examinations to re-qualify for his position. In addition, he must obtain a facility rating for the type of facility to which he is assigned.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An air-traffic controller should: - work well under pressure; - be responsible; - be emotionally and mentally mature and stable; - be able to make quick, accurate decisions; - be able to work rapidly; - have excellent physical and mental health; - have a good memory; - have an audible voice to be able to express himself clearly; - have normal perception of colour; - have good hearing and eyesight.

Aircraft Avionician			
General Information			
Description – what is this occupation?			
An aircraft avionician maintains and repairs mechanical, electrical, electronic and digital instruments on an aircraft.			
Typical Job Activities – what will I do in this occupation?			
The trade combines the work of the aircraft electrician, aircraft instrument mechanic, aircraft radar- and radio- technician and the electronics mechanic. The aircraft instrument mechanic / electrician / electronics mechanic: - uses measuring and testing equipment for the tracing of circuits and for measuring circuit values - maintains and repairs precision measuring instruments, pressure switches, various types of gauges, transmitters, indicators, compasses, altimeters, engine power and control instruments - repairs oxygen equipment, gyroscopic instruments, auto-pilot components and air-conditioning systems - joins metals, applies cleansing agents and treats metals against rust and fatigue - repairs and maintains certain aircraft parts such as instrument panels, pressure sensors, navigating systems and instrument landing systems. NOTE: Refer to the alphabetical list of occupations to find the job description of: Aircraft radar- and radiotrician			
Related Occupations – which occupations are more or less the same?			
- Aeronautical engineering technician - Aircraft radar- and radiotrician - Automotive electrician - Domestic appliance mechanician - Instrument mechanician - Millwright - Radio and television mechanic			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 11 or N2. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Physical Science, Trade Theory, Technika: Electrical, Technika: Electronics, Technika: Mechanical, Technical Drawing			

Entry to Work Place

SOUTH AFRICAN AIR FORCE:

The minimum training period is three years.

The training programme consists of the following:

- Basic regimental training at the Air Force Gymnasium in Valhalla.
- Junior Non-commissioned Officers Development Course at a training centre.
- A practical workshop phase where basic technical hand skills are taught.
- Compulsory school term at a technical (FET) college.
- A basic trade course from 13 to 16 months.
- A voluntary second school term.
- Practical training utilising the competency based modular system at an air force unit to gain experience on the equipment.
- Qualifying examination.

The apprentice will be obliged to sign a contract with the government. This defines that the government will undertake to train the person for a specific time period. In return he will pay his course fees by way of employment for a period of time equal to his training. The candidate who breaks this contract needs to repay the state for the remaining period of his course.

DENEL AVIATION:

Competency based modular training to become an aircraft avionician:

- Theoretical training: 13 weeks at a technical college.
- Practical training: 35 weeks at the Denel Training Centre.
- Duration of course: Progress depends on the personal performance of the student in the modular system.
- Final examination: Set by the Department of Transport.

SOUTH AFRICAN AIRWAYS (SAA):

Competency based modular training to become an aircraft avionician:

- Theoretical training: Kempton Park Technical (FET) College.
- Practical training: Johannesburg International Airport.
- Duration of course: 2 years depending on the progress of the candidate in the modular system.
- Trade testing is done at centres accredited by the Training Board of this particular industry.

ADDITIONAL REQUIREMENTS:

The prospective aircraft avionician must:

- be 16 years of age;
- be single;
- be bilingual;
- be medically fit;
- pass a prescribed aptitude test;
- undergo a selection procedure.

NOTE:

Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training.

A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.

What level of natural skill and/or aptitude do I need for this occupation?

Exceptionally High	High	Moderate	Low
An aircraft avionician should: - have a mechanical interest and ability; - be interested in electronics; - be able to think clearly and make quick decisions; - be able to work accurately under pressure; - have neat, orderly working habits; - communicate well; - get along with others; - be flexible, dependable and even-tempered; - have good vision and colour discrimination; - have manual skills.

Aircraft Mechanic			
General Information			
Description – what is this occupation?			
The correct functioning of aircraft engines is of great importance. The aircraft mechanic has the skills and knowledge required to carry out maintenance and repair of aircraft engines and structures such as airframes, flying controls, retractable undercarriages, propellers, hydraulic and pneumatic systems.			
Typical Job Activities – what will I do in this occupation?			
The aircraft mechanic: - dismantles, inspects and reassembles engines - overhauls the entire engine operating accessories such as fuel pumps, injection systems, turbo-chargers, etc - puts the engine in a test rig to conduct a test run - refits the engine to the airframe.			
Related Occupations – which occupations are more or less the same?			
- Aeronautical engineering technician - Domestic appliance mechanic - Instrument mechanic - Mechanical engineering technician - Motorcycle and scooter mechanic - Motor mechanic - Radio and television mechanic - Tractor and agricultural machinery mechanic			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 or N1. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Physical Science, Trade Theory, Technika: Mechanical, Technical Drawing			

Entry to Work Place

SOUTH AFRICAN AIR FORCE:

The minimum training period is three years.

The training programme consists of the following:

- Basic regimental training at the Air Force Gymnasium in Valhalla.
- Junior Non-commissioned Officers Development Course at a training centre.
- A practical workshop phase where basic technical hand skills are taught.
- Compulsory school term at a technical (FET) college.
- A basic trade course from 13 to 16 months.
- A voluntary second school term.
- Practical training utilising the competency based modular system at an air force unit to gain experience on the equipment.
- Qualifying examination.

The apprentice will be obliged to sign a contract with the government. This defines that the government will undertake to train the person for a specific time period. In return he will pay his course fees by way of employment for a period of time equal to his training. The candidate who breaks this contract needs to repay the state for the remaining period of his course.

DENEL AVIATION:

Competency based modular training to become an aircraft mechanic:

- Theoretical training: 13 weeks at a technical college.
- Practical training: 35 weeks at the Denel Training Centre.
- Duration of course: Progress depends on the personal performance of the student in the modular system.
- Final examination: Set by the Department of Transport.

SOUTH AFRICAN AIRWAYS(SAA):

Competency based modular training to become an aircraft mechanic:

- Theoretical training: Kempton Park Technical (FET) College.
- Practical training: Johannesburg International Airport.
- Duration of course: 2 years depending on the progress of the candidate in the modular system.
- Trade testing is done at centres accredited by the Training Board of this particular industry.

ADDITIONAL REQUIREMENTS:

The prospective aircraft mechanic must:

- be 16 years of age;
- be single;
- be bilingual;
- be medically fit;
- pass a prescribed aptitude test;
- undergo a selection procedure.

NOTE:

Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training.

A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.

Aircraft Structures Worker			
General Information			
Description – what is this occupation?			
An aircraft structures worker manufactures and maintains airframes and engine components and parts.			
Typical Job Activities – what will I do in this occupation?			
The aircraft structures worker marks and cuts sheet metal according to engineering drawings. Various factors such as the metallic properties of the metal must always be taken into consideration. Shapes are obtained by bending the sheet metal into the desired form and by joining components together using soldering, brazing, welding, riveting or bonding techniques. You will also shape and fit pipes to aircraft. The aircraft structures worker has to treat all metals to protect them from corrosion. Safety precautions should be strictly adhered to.			
Related Occupations – which occupations are more or less the same?			
- Aircraft assembler - Aircraft engine fitter - Aircraft instrument mechanic - Airframe fitter - Armature winder - Automotive machinist - Automotive sheet metal worker - Fitter and turner - Motor mechanic - Sheet metal worker - Tool-, jig- and die-maker

Aircraft Turner and Machinist			
General Information			
Description – what is this occupation?			
The aircraft turner and machinist performs maintenance work on aircraft parts and components by applying turning, milling, grinding, and jig-boring skills.			
Typical Job Activities – what will I do in this occupation?			
In this occupation a person must be able to manufacture parts from various types of special aircraft materials. The aviation turner and machinist must adhere to all the prescribed rules and regulations laid down by manufacturing companies and vendors. All machining processes must be documented. All work done will be subjected to comprehensive inspection to meet safety standards.			
Related Occupations – which occupations are more or less the same?			
- Aircraft assembler - Aircraft engine fitter - Aircraft instrument mechanic - Aircraft structures worker - Airframe fitter - Armature winder - Automotive machinist - Fitter and turner - Motor mechanic - Tool-, jig- and die-maker			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 or N1. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Physical Science, Trade Theory, Technika: Mechanical, Technical Drawing, Metalwork			

Entry to Work Place

SOUTH AFRICAN AIR FORCE:

The minimum training period is three years.

The training programme consists of the following:

- Basic regimental training at the Air Force Gymnasium in Valhalla.
- Junior Non-commissioned Officers Development Course at a training centre.
- A practical workshop phase where basic technical hand skills are taught.
- Compulsory school term at a technical (FET) college.
- A basic trade course from 13 to 16 months.
- A voluntary second school term.
- Practical training utilising the competency based modular system at an air force unit to gain experience on the equipment.
- Qualifying examination.

The apprentice will be obliged to sign a contract with the government. This defines that the government will undertake to train the person for a specific time period. In return he will pay his course fees by way of employment for a period of time equal to his training. The candidate who breaks this contract needs to repay the state for the remaining period of his course.

DENEL AVIATION:

Competency based modular training to become an aircraft turner and machinist:

- Theoretical training: 13 weeks at a technical college.
- Practical training: 35 weeks at the Denel Training Centre.
- Duration of course: Progress depends on the personal performance of the student in the modular system.
- Final examination: Set by the Department of Transport.

SOUTH AFRICAN AIRWAYS (SAA):

Competency based modular training to become an aircraft turner and machinist:

- Theoretical training: Kempton Park technical (FET) college.
- Practical training: Johannesburg International Airport.
- Duration of course: 2 years depending on the progress of the candidate in the modular system.
- Trade testing is done at centres accredited by the Training Board of this particular industry.

ADDITIONAL REQUIREMENTS:

The prospective aircraft turner and machinist must:

- be 16 years of age;
- be single;
- be bilingual;
- be medically fit;
- pass a prescribed aptitude test;
- undergo a selection procedure.

NOTE:

Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training.

A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.

What level of natural skill and/or aptitude do I need for this occupation?

Exceptionally High	High	Moderate	Low
An aircraft turner and machinist should: - have mechanical interest; - have manual dexterity; - be able to read drawings and do job planning; - work to fine tolerances; - work on his own; - be responsible; - be able to work accurate under pressure; - take responsibility for work and machines; - accept and carry out instructions; - have neat orderly working habits; - obtain maximum qualification to keep up with technology; - be dependable and loyal; - be flexible to work under any conditions; - have good health and physical fitness.

Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Experience in related fields	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities			The growth of private companies (big and small)	
Technology		Direct consumer demands – “man in the street”			My own performance and skills	
Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Airport Manager			
General Information			
Description – what is this occupation?			
An airport manager plans, directs and co-ordinates all activities concerning the maintenance of airport facilities and the operation of the airport in accordance with government regulations			
Typical Job Activities – what will I do in this occupation?			
As an airport manager, you will also be responsible for the management of the personnel that report to and assist you in carrying out your duties. At a large international airport, the task of management would probably be split between a few managers, each entrusted with a specific task or section of the airport. Some of the duties of the airport manager include: - putting procedures in place to deal with aircraft accidents and other emergencies - regular inspection of runways, buildings and beacons - inspection of lighting, automotive and construction equipment and other airport facilities - co-ordination of repair and maintenance workers - guiding staff in investigating violations of air and ground traffic regulations and initiating disciplinary action - preparing the annual budget, which entails reviewing proposals for improvements to facilities and estimating the increase in the volume of air traffic			
Related Occupations – which occupations are more or less the same?			
- Marketing manager - Personnel manager			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics, Economics			
Entry to Work Place			
IN-SERVICE TRAINING: The Airport Companies offers training courses for its own staff.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An airport manager should: - have management ability; - be able to deal with people on all levels; - understand air transport and all other forms of transport that centre on an airport.

Ambulance and Emergency Care Worker			
General Information			
Description – what is this occupation?			
An ambulance and emergency care worker resuscitates and stabilises the condition of critically ill or injured persons by applying emergency care			
Typical Job Activities – what will I do in this occupation?			
All ambulances are in contact with a central control centre by radio or computer. After a call has been received, the ambulance and emergency worker hastens to the emergency scene observing traffic safety rules and legislation pertaining to emergency vehicles. On arrival at the scene you will examine both the patient and the situation to decide upon appropriate treatment, which includes basic life-support and treatment of wounds and fractures. Specialised equipment and rescue tools like the "Jaws of Life" can be used to free a person from a wreckage. You will also make the site safe and manage bystanders. The patient is then transported to hospital by ambulance. On route treatment is provided to the patient. At the hospital you will report on the patient's condition and treatment. After this procedure the ambulance and emergency care worker returns to a base where linen and equipment are replaced.			
Related Occupations – which occupations are more or less the same?			
- Dental assistant - Fireman - First-aid worker - Midwife - Nurse - Paramedic - Psychiatric nurse - Welfare worker			
Educational Requirements - which qualifications do I need to enter this occupation?

Anaesthetist			
General Information			
Description – what is this occupation?			
An anaesthetist is a medical doctor specialising in the administration of local and general anaesthetics to patients about to undergo a medical procedure			
Typical Job Activities – what will I do in this occupation?			
The anaesthetist first consults with patients to ascertain their history in respect of allergies, previous reactions to anaesthetics and current medication and then monitors patients throughout the medical procedure and their recovery from the anaesthetic. The anaesthetist also follows up on patients' immediate post-operative recovery to establish whether the anaesthetic is causing any adverse side-effects.			
Related Occupations – which occupations are more or less the same?			
- Clinical technologist - Geneticist - Medical representative - Medical laboratory technologist - Pharmacist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology NOTE: Competition to enter medical studies is stiff and there are usually plenty of applicants with A and B aggregates who will naturally be given preference.			
Entry to Work Place			
UNIVERSITY: MBChB degree: - Theoretical training: 5 years. - Student internship: 1 year. - Practical work at a hospital: 1 year (also known as the house doctor year). Post-graduate study for specialisation as an anaesthetist: MMed or FCP(SA): 4 years. ADDITIONAL REQUIREMENTS: Before commencing post-graduate study for specialisation as an anaesthetist the candidate must: - be in possession of a MBChB degree for 2 years; - be registered as a medical doctor with the Interim Medical and Dental Council (IMDC) of South Africa for 1 year. REGISTRATION: On successful completion of the examination to qualify as specialist, the candidate must register with the IMDC as anaesthetist.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An anaesthetist should: - have above-average intellectual ability; - have concern for the health and well-being of people; - be able to reassure tensed patients; - inspire confidence; - be highly responsible; - have emotional stability; - be able to withstand the pressures that go with this job; - be in excellent health and have stamina to cope with night shifts and working on stand-by.

Animal Trainer			
General Information			
Description – what is this occupation?			
Animal trainers teach animals to compete in shows, perform tricks and to obey commands. Most animal trainers specialise in training one animal type but some do several types.			
Typical Job Activities – what will I do in this occupation?			
Animal trainers set up programs that consist of reading reptiles. Before training starts, the trainer will evaluate the animal's ability and temperament to determine which method of training would be appropriate and whether the animal can be trained. They then repeat routines over-and-over until the animal does what is required of it. The animal is then rewarded accordingly. Animal trainers sometimes direct or organise animal shows e.g., in a circus, guiding the animal in its performance.			
Related Occupations – which occupations are more or less the same?

Animator			
General Information			
Description – what is this occupation?			
The animator works with drawings, which are photographed to give an effect of continuous movement when run through a projector.			
Typical Job Activities – what will I do in this occupation?			
The animator makes only the key drawings referred to as 'extremes'. These drawings on the animator's drawing board are necessary for showing the action-spacing instructions that guide the animator's assistant in doing the intermediate drawings needed to complete the depiction of the action. When all the drawings have been completed and assembled, the action is checked. Flipping through the pages will reveal any error in the action sequence, and the relevant drawing can then be corrected. The drawings are then photographed in sequence. Sound effects are mixed with speech on the dialogue track and combined with the optical negative for the final composite print.			
Related Occupations – which occupations are more or less the same?			
- Artist - Art Teacher - Cartoonist - Décor designer - Graphic designer - Model builder			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma course. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Art			
Entry to Work Place			
IN-SERVICE TRAINING: There is no recognised academic training course specifically for an animator. Most of the actual training is gained by in-service training with a practising animator. This may take up to three years depending on the individual's interest in his work, his diligence and talent.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An animator should: - be artistically inclined and imaginative; - be industrious; - have a comprehensive knowledge and understanding of figure drawing, cartoon drawing and landscape painting.

Anthropologist			
General Information			
Description – what is this occupation?			
An anthropologist studies the lifestyle and culture of human societies with reference to politics, religion, legal system, economy, education, language, health care and art			
Typical Job Activities – what will I do in this occupation?			
Comparative studies are made relating to human origin, evolution, races, the cultures created, as well as the distribution and physical characteristics of human beings. In South Africa particular attention is paid to the rich variety of inhabitants. The heterogeneous composition of the population provides ideal opportunities for and challenges to the anthropologist. Because of the sensitivity that an anthropologist has towards the different lifestyles, circumstances and problems of people you will be used in various roles in human development, conflict resolution, missionary work and easing of relationships in the workplace. The anthropologist spends time in an office, the library as well as in the "field". You will study relevant literature, observe and interview people, write reports and work with other professionals trying to solve problems between people with different cultural backgrounds. Anthropology is the total study of human origin, development and social interaction using a holistic approach and uses mainly qualitative research by means of participant observation.

Box 94, Grahamstown, 6140. Tel: (046) 6038111. - Fresh Water Research Institute, Zoology Department University of Cape Town, Rondebosch, 7700. Tel: (021) 6509111.						
Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Experience in related fields	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities		The growth of private companies (big and small)		
Technology		Direct consumer demands – “man in the street”		My own performance and skills		
Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with animals	I like to work with nature	I like to work with numbers

Archaeological Surveyor			
General Information			
Description – what is this occupation?			
The archaeological surveyor prepares maps of an area to be excavated and also makes plans and drawings of the dig as it progresses			
Typical Job Activities – what will I do in this occupation?			
First, the site is studied and then sophisticated technologies, such as systems and laser alignment or satellite positioning are used, to locate and plot relevant features.			
The archaeological surveyor transfers information to maps for use in planning fieldwork. During the excavation you may interpret findings and record details by cross-section plans. You may draw artefacts which are found and you will work closely with the rest of the team on site.			
Related Occupations – which occupations are more or less the same?			
- Archaeological technician - Archivist - Cartographer - Geographer - Historian			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: History, Languages, Geography			
Entry to Work Place			
Applicable degree, diploma or skills.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An archaeological surveyor should: - enjoy working outdoors; - have an inquiring mind; - be able to give attention to detail; - like to travel; - be able to work on his own as well as in a team; - have mathematical ability.			
Employment Indicators – what are the important employment facts regarding this occupation

Archaeologist			
General Information			
Description – what is this occupation?			
The archaeologist studies the history and culture of earlier societies			
Typical Job Activities – what will I do in this occupation?			
You will reconstruct records of extinct cultures and studies, classify and interpret artefacts, tools, art and dwellings to obtain a better insight into the history, culture, social, spiritual and technological activities of earlier societies. An archaeologist's job can be divided into the following broad categories: - the task begins with field work, which entails the excavation of an archaeological site. Plans have to be drawn of the site, meticulous records kept, photographs taken and the objects found sorted and numbered - the next step is the work in the laboratory where the objects are scientifically analysed - finally the archaeologist has to interpret the findings and write them up in a report, which may be published in a scientific journal.			
Related Occupations – which occupations are more or less the same?			
- Archaeological technician - Archivist - Anthropologist - Cartographer - Geographer - Historian			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: History, Languages, Geography			
Entry to Work Place			
UNIVERSITY: BA or BSc degree with Archaeology plus an honours degree in Archaeology. Other recommended degree subjects are: Anthropology, Cultural History, History of Art, Geography, Zoology, Botany, Palaeontology, Languages. Post-graduate training: As job opportunities are limited, students are advised to further their studies to Masters and Doctorate level.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An archaeologist should: - be versatile because he has a wide range of tasks to perform; - approach problems meticulous, systematic and logic; - be sensitive to social issues; - have patience; - be self-disciplined; - have above-average intelligence; - be dedicated to preserve the past; - be able to learn foreign languages as this will be a useful attribute.

Architect			
General Information			
Description – what is this occupation?			
The architect is professionally trained to design and decorate buildings, with a view to utility, durability, convenience and aesthetic appeal			
Typical Job Activities – what will I do in this occupation?			
As an architect you will use your knowledge of construction materials and methods, and of architectural techniques to design and oversee building constructions.			
An architect will discuss the purpose, requirements and cost of a project with the client and then prepare drawings. If these are accepted, the final design is prepared together with working drawings for the use of contractors. The architect may assist the client in selecting a contractor. During construction, the architect may visit the site to ensure that the design is being followed. You may also help in selecting building sites, preparing cost and land-use studies, and carrying out long-range planning for site development.			
Related Occupations – which occupations are more or less the same?			
- Builder - Building inspector - Building contractor - Draughtsman - Industrial designer - Landscape architect - Town and regional planner			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma course. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Art, Technical Drawing			
Entry to Work Place			
Appropriate qualification from university or Technikon ADDITIONAL REQUIREMENTS: A prospective architect must obtain one or two years of experience under the guidance of a registered architect before he can register with the SA Institute of Architects.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An architect should: - be able to work independently; - have an aptitude for solving problems; - be creative and artistic but practical; - have leadership ability; - have a good sense for form and three-dimensional observation; - have mathematical ability; - get along with others; - be proficient in speech and writing and give instructions clearly and understandably; - have scientific and technical knowledge; - be able to visualise; - have good eyesight; - be healthy and have a steady hand.

Architectural Metalworker			
General Information			
Description – what is this occupation?			
An architectural metalworker makes steel doors, metal patterns, fixtures, templates and railings for architectural purposes			
Typical Job Activities – what will I do in this occupation?			
You may draw your own designs and sketches, but you will usually work under assignment of an architect who will supply you with drawings. As an architectural metalworker you will mark the outlines on the metal (brass, copper, steel or alloys). You will then cut and forge the metal to the desired shape by means of various machine tools such as metal band saws, power shears, fly presses and swage machines. The metal is heated in a furnace to make it malleable. You will use soldering, brazing or welding techniques to join the different parts of the metal pattern together and you will complete the task by fixing the door, pattern or template to the building. The architectural metalworker needs to take all the necessary precautions to ensure that all the work is done in a safe and clean environment.			
Related Occupations – which occupations are more or less the same?			
- Architect - Architectural technologist - Blacksmith - Construction steel worker - Coppersmith - Mechanical engineer - Metallurgical engineer - Sheet metal worker - Toolmaker			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate. Some employers prefer higher qualifications. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics, Metalwork, Technical Drawing			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become an architectural metalworker you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical (FET) college. - Practical training: In-service training under supervision of a qualified tradesman. - Duration of course: 3 years but can be completed in a shorter period provided that the candidate have higher qualifications than the entrance Requirements. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become an architectural metalworker you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
The architectural metalworker should: - enjoy working with his hands; - show inventiveness and creativity in the processing of metal; - have patience and persistence in order to execute all tasks with the necessary accuracy; - have mathematical aptitude to cope with drawing and interpreting sketches of three-dimensional designs; - be a neat, precise worker; - have good health and physical fitness; - have good hearing and vision; - have manual dexterity

Architectural Model Builder			
General Information			
Description – what is this occupation?			
An architectural model builder builds scale models of buildings drafted by architects			
Typical Job Activities – what will I do in this occupation?			
Scale models are necessary to obtain practical information as to how the building will look when finished, how much sunlight will fall through the windows and how the building fits in with its surroundings. The architectural model builder constructs different types of models to depict particular features of the building. These include: - Block models to show only the external form of the building. - Working models to represent the plans in concrete form to builders. - Detailed completed models to show what the actual building will look like. - Interior models showing the internal set-up complete with scale-model furniture. In this case the roof of the model may lift off, to show the inside arrangement. Models are useful because they can help the architect and his client to decide whether the proposed building should be constructed or not. Developers also make use of models to illustrate precisely how the proposed building will look. This enables them to sell the building before the project has even started.			
Related Occupations – which occupations are more or less the same?			
- Architect - Architectural metalworker - Architectural technologist - Construction manager - Draughtsman - Interior decorator - Landscape architect			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate for a diploma course. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics, Art, Woodwork			

Entry to Work Place			
IN-SERVICE TRAINING: No educational Requirements for this occupation are set. If a person is artistically inclined, is proficient in fine detail work, possesses initiative and creative power, has the knowledge and experience to interpret architectural drawings and to visualise these three-dimensionally, he may be considered for appointment. Employers offer in-service training or may send a candidate to one of the models building studios to receive training. MODEL BUILDING STUDIO: There are a few model building studios where students can receive training: Pretoria, Johannesburg, Western Cape. It will take a person two years to learn all the skills and aspects of model building. The course content include the following: Materials, Spraying Techniques, Moulding, Cutting Techniques, Light-duty Machinery Work. A good knowledge in the reading as well as interpreting of architect's plans is recommendable. It will be an advantage to have a diploma.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An architectural model builder should: - have artistic talent; - be adept at working with fine detail; - work correctly and accurately; - interpret architectural drawings; - be able to visualise two-dimensional drawings three-dimensionally; - have handiness and finger dexterity.

Archivist			
General Information			
Description – what is this occupation?			
An archivist is responsible for the care and preservation of valuable materials which could include documents, maps, photographs, microfilm, films, video tapes and sound recordings. The archivist also has to store these materials in such a way that they are easily accessible			
Typical Job Activities – what will I do in this occupation?			
Since many of the materials in an archivist's care are irreplaceable, proper preservation of them is probably the most important part of the job. The archivist needs to keep abreast of the latest techniques to guard against various hazards. The material has to be filed and indexed so that it is easily accessible to researchers. Record management, control of material kept, and regular evaluation of the material to determine whether it is of temporary or permanent significance is also part of archival work. Another aspect of the job involves the publication or dissemination of information to scholars and other potential researchers in order to familiarise them with the archives in the archivist's custody.			
Related Occupations – which occupations are more or less the same?			
- Anthropologist - Archaeologist - Genealogist - Historian - History teacher - Political scientist - Public administrator - Researcher			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for degree courses. Senior Certificate for diploma courses. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: History, Languages			
Entry to Work Place			
UNIVERSITY: BA degree with at least one of the following subjects is a prerequisite for employment in the government service: History, Political Science, Public Administration, Languages, Cultural History.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An archivist should: - have a keen interest in history and research; - have analytical ability in order to understand the content of documents and the context in which they were created; - be able to organise large amounts of information; - have well-developed communication skills to ensure clear retrieval instructions; - have administrative ability; - have an eye for detail.

Armament Fitter			
General Information			
Description – what is this occupation?			
An armament fitter is responsible for inspecting, servicing and repairing firearms, artillery weaponry and weaponry equipment			
Typical Job Activities – what will I do in this occupation?			
The apprentice is trained in the basic principles of fitting, including filing, sawing, chiselling, screw- and nut-threading, drilling and turning. Knowledge of metals is required as the armament fitter works with iron, steel, carbon steel, aluminium, alloy steel, copper and magnesium. The armament fitter must also have a thorough knowledge of a wide range of arms, ammunition and explosives, warheads and specialised weaponry such as hydraulic and pneumatic weaponry systems. The armament fitter specialises according to the working environment, i.e.: - Artillery division: Guns. - Armoured corps: Tanks equipped with guns, machine guns, bombs and mortars. - Infantry division: Rifles, machine guns, grenades and mortars. - Air force: Fighter aircraft armed with rockets, machine guns and bombs. - Navy: Anti-aircraft artillery, torpedoes and missiles.			
Related Occupations – which occupations are more or less the same?			
- Acoustical insulator - Aircraft maintenance mechanic - Aircraft radar/radiotrician - Aircraft rigger - Airframe fitter - Apprentice mechanic - Armature winder - Automotive machinist and winder - Automotive plater - Electrician - Fitter - Gravure minder - Gunsmith - Instrument maker and repairer - Instrument mechanician			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Physical Science, Metalwork, Trade			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become an armament fitter you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical (FET) college. - Practical training: In-service training under supervision of a qualified tradesman. - Duration of course: 4 years but it can be completed in a shorter period provided that the candidate has higher educational qualifications. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: Some employers require candidates to obtain a shooting licence.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An armament fitter should: - be meticulously accurate; - have orderly working habits; - be well disciplined; - be very responsible; - have mechanical interest and ability; - have mathematical ability; - possess physical fitness and strength; - have good vision and colour discrimination; - have good eye-hand co-ordination; - have finger dexterity

Armature-winder			
General Information			
Description – what is this occupation?			
An armature-winder has to locate and repair or replace the broken part of an electric motor.			
Typical Job Activities – what will I do in this occupation?			
Wire coils are among the most important parts of any electrical machine. When the coils of motors burn out or are damaged, the armature winder locates the broken parts, removes them and either replaces them with new ones or completely rewinds all the coils. Various kinds of testing instruments to trace burnt-out coils are used. The armature-winder works from diagrams that supply details of the arrangement of coils, the number of turns required of each, and so on. In order to wind coils to the correct number of turns and shape, coil-winding machines are used. The coils are checked, fitted into the slots of motors and generators and connected according to circuit requirements. Finally the armature-winder will assemble the motors, taking care not to damage the insulation around the wires, after which the motors and generators are ready for use.			
Related Occupations – which occupations are more or less the same?			
- Aircraft instrument mechanician - Aircraft rigger - Automotive electrician - Cable driller: oil and gas wells - Driller: diamonds and other minerals - Electrician - Electro-mechanician (millwright) - Fitter: electrical switchgear and control apparatus			
Educational Requirements - which qualifications do I need to enter this occupation?

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with animals	I like to work with nature	I like to work with numbers

Aromatherapist			
General Information			
Description – what is this occupation?			
Aromatherapy is a branch of both holistic medicine and somatology. It entails massaging the body with essential aromatic oils, each of which has different properties (some stimulate, others smooth).			
Typical Job Activities – what will I do in this occupation?			
Clients discuss their specific problems with an aromatherapist who then selects the correct oil or oils for treatment. A basic practical knowledge of the oils and massage techniques is essential for effective treatment (some oils can have negative effects if used in the wrong situation). The oils have to be mixed with a carrier oil (pure vegetable oils) because they are highly concentrated.			
The aim of aromatherapy is to detoxify the body and to calm and relax the client.			
Related Occupations – which occupations are more or less the same?			
- Acupuncturist - Health and radiation physicist (Radiation protection specialist) - Herbalist - Homoeopath - Somatologist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate for a diploma course. COMPULSORY SUBJECTS: Biology RECOMMENDED SUBJECTS: Physical Science, Business Economics			
Entry to Work Place			
Applicable qualification			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An aromatherapist should: - have good health; - have a pleasant personality and appearance; - have empathy and tact; - listen and communicate well; - be enthusiastic; - have professionalism; - be dedicated to the profession; - take responsibility for decisions

Artist			
General Information			
Description – what is this occupation?			
As an artist you will create a variety of works of art using the media you prefer, such as oil paint or watercolours. You will decide on a subject or idea for your work and select the supplies you need. You may have to prepare the supplies e.g. by stretching the canvas or mixing paints. Using your own methods, you create the work you have in mind.			
Typical Job Activities – what will I do in this occupation?			
Some artists create works for their own satisfaction while others undertake commissioned works or portraits. An artist can also teach art in schools or other educational institutions or give part-time lessons to both adults and children. Most artists cannot support themselves solely on the sale of their work but have to hold down other jobs too. Art is a reflection and an integral part of human history, progress and culture. Artists today, as in the past, reflect, record and comment on our world, our beliefs, our moments of magnificence and failure, our fears and ambitions. The artist skilfully gives physical expression to a vision so that the observer can feel and understand the world in the same way.			
Related Occupations – which occupations are more or less the same?

Assayer and Sampler			
General Information			
Description – what is this occupation?			
It is the responsibility of the assayer and sampler to examine the ore that is mined on a regular basis.			
Typical Job Activities – what will I do in this occupation?			
Assaying and sampling are the processes through which large amounts of ore samples are used to determine the nature, quality and quantity of the ore. The sampler visits different sections of the mine (underground) on a daily basis to take samples of the ore. This is a specialised task since the information obtained from the ore is vital for advance planning. The assayer determines elements in samples using various techniques. You will determine the quantity and quality of elements in ores, process materials, base metals, non-metallic materials, concentrates, effluents and air samples. You will use chemical processes such as fire or dry assay procedures and wet chemical methods. The determination of trace elements requires an exceptional degree of accuracy. Analyses are conducted for metallurgical accounting, process control, effluent control, environmental health and quality control. The results obtained from the work of the assayer and sampler help organisations or clients to plan current and future operations more efficiently. The working conditions may vary from air-conditioned rooms to hot and dusty environments.			
Related Occupations – which occupations are more or less the same?			
- Chemical technologist - Engineering draughtsman - Engineering technician - Geochemist - Geologist - Instrument engineer - Metallurgist - Mining technician - Production chemist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
A Senior Certificate with matric exemption for a degree course. A Senior Certificate for a diploma course. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Geography			
Entry to Work Place			
None			

What level of natural skill and/or aptitude do I need for this occupation?				
Exceptionally High	High	Moderate	Low	
An assayer and sampler should: - have an analytical mind; - have an aptitude for scientific inquiry; - be responsible, systematic and neat; - be interested in the environment and especially geology; - maintain good interpersonal relations.

Assembly Line Worker			
General Information			
Description – what is this occupation?			
An assembly line worker is responsible for performing one task or a set of tasks in the assembly process. Assembly lines are found in various factories where products being manufactured consist of a number of components assembled to form a complete unit.			
Typical Job Activities – what will I do in this occupation?			
The assembly line worker usually stands alongside a conveyor system, performs the necessary task and allows the product to pass on to the next worker. Most assembly line work is performed by hand, but sometimes tools are used. Commonly used tools are screwdrivers, pliers, soldering irons and tools specifically designed for certain processes. A typical assembly line task is drilling holes in an item for screws and passing the item on for the next worker to screw the screws into the holes.			
Related Occupations – which occupations are more or less the same?			
- Cargo controller - Labourer - Machine operator - Petrol pump attendant - Production worker - Water service operator - Wrapper and labeller			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: None			
Entry to Work Place			
IN-SERVICE TRAINING: The assembly line worker is trained on the job by experienced workers. Each facet of the assembly process requires specialised training. Retraining is sometimes necessary when a worker is transferred.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An assembly line worker should: - be able to perform the same task for long periods without getting bored or making mistakes; - have hand dexterity; - have good eye-hand co-ordination.

Assessor			
General Information			
Description – what is this occupation?			
The assessor is appointed by short-term insurance companies to professionally assess damages claimed by clients. In the case of damage to property by a natural disaster or a malicious act, the assessor visits the actual site of the property to make the assessment. Damaged motor vehicles are usually assessed in a panel beaters workshop.			
Typical Job Activities – what will I do in this occupation?			
The assessor: - determines the extent of the damage - liaises with in-house claims personnel to ascertain the extent of the client's cover - estimates the cost of parts and labour to repair or replace the damaged property or motor vehicle - in the case of a motor vehicle, evaluates the practicality of repair as opposed to payment of the market value of the vehicle before the accident. The assessor negotiates a settlement figure either with a supplier or with the client.			
Related Occupations – which occupations are more or less the same?			
- Estate agent - Insurance agent - Valuer/Appraiser			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics			
Entry to Work Place			
IN-SERVICE TRAINING: Most employers offer in-service training programmes in conjunction with examinations set by the Insurance Institute of South Africa.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A assessor should: - have a tactful nature; - be able to work quickly and accurately; - have a sound knowledge of the value of property.

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with numbers		

Astronomer			
General Information			
Description – what is this occupation?			
An astronomer will use knowledge of mathematics and physics to study the nature, origin and evolution of astronomical objects to obtain a deeper understanding of the universe. This knowledge can be applied to developing navigational systems that will enable us to find our way through space.			
Typical Job Activities – what will I do in this occupation?			
Information on astronomical objects is collected by detecting signals through space-based and ground-based telescopes (optical, gamma-ray, X-ray, radio) in conjunction with sensitive detecting devices. This data is analysed with the aid of computers, and interpreted in the mathematics and physics framework. An observational astronomer plans research which involves the measurement of electromagnetic radiation (such as light waves). As an astronomer, you will analyse the results you obtain and publish your findings so that others in the field will have access to the information. The theoretical astronomer concentrates on developing theories concerning various aspects of the universe. It is possible to work in both theoretical and observational astronomy, though most astronomers tend to be more active in one or the other. Some astronomers also teach Mathematics or Physics at a university.			
Related Occupations – which occupations are more or less the same?			
- Chemist - Forensic chemist - Geologist - Hydrogeologist - Magnetism physicist - Mathematician - Metallurgist - Meteorologist - Mineralogist - Oceanographer - Palaeontologist - Physicist: heat - Physicist: nuclear - Physicist: solid state - Physicist: sound - Physicist: theoretical - Statistician			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science			

Entry to Work Place				
Post-graduate study: The professional astronomer has to obtain a PhD degree. ADDITIONAL INFORMATION: The South African Astronomical Observatory and the Radio Astronomy Observatory occasionally employ BSc graduates who may be encourage to work for MSc or PhD degrees (as external students of a university).				
What level of natural skill and/or aptitude do I need for this occupation?				
Exceptionally High	High	Moderate	Low	
An astronomer should: - have imagination and an inquisitive mind; - be persistent and able to handle disappointment; - concentrate on details and work accurately; - be able to work independently as well as in a team; - have above average ability in Mathematics and Physics

Attorney/Lawyer			
General Information			
Description – what is this occupation?			
An attorney, also known as a lawyer, gives legal advice to clients regarding rights and obligations. The attorney may serve businesses, institutions, local authorities, the government or individuals. Although your field of speciality will determine your actual duties, most lawyers perform all the basic legal activities.			
Typical Job Activities – what will I do in this occupation?			
An attorney appears in court on behalf of his client. You will therefore need to consult with your client to determine the nature of the problem and to give advice. These activities may fall in the field of: - business and corporate law - civil and criminal litigation - property transactions - taxation - estate planning and business - personal advice. An attorney can handle civil or criminal cases. In a civil case you will assist your client with contracts, leases, wills and trusts. In a criminal case you will act on behalf of a client who is, for example, charged with theft.			
Related Occupations – which occupations are more or less the same?			
- Advocate - Insurance claims assessor - Legal adviser - Legal assistant/paralegal - Magistrate - Patent attorney - State prosecutor			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: English RECOMMENDED SUBJECTS: Languages, Accounting			
Entry to Work Place			
UNIVERSITY: To practise as an attorney you need to do the following: - A LLB degree obtained from a South African University; - two years of Service under articles of clerkship with a South African firm of attorneys or community service at an accredited law clinic or approved office of the Legal Aid Board; - the successful completion of the Attorneys Admission Examination; - a legal training course approved by the Law Society will have to be attended before application can be made for admission as an attorney.			

What level of natural skill and/or aptitude do I need for this occupation?				
Exceptionally High	High	Moderate	Low	
An attorney should: - enjoy working with people; - be able to communicate well both in writing and in speech; - be able to reason logically; - be able to interpret problems quickly and correctly; - be honest and reliable; - have integrity; - have a logical mind and above average intelligence.

Au Pair			
General Information			
Description – what is this occupation?			
Au pair work gives young people the opportunity to see the world and gain experience and self-confidence before they commence studies or a career.			
Typical Job Activities – what will I do in this occupation?			
The main responsibility of an au pair is to care for young children in an overseas country. It is usually an exchange programme where the au pair has the opportunity to be acquainted with the culture and habits of overseas families. Generally, the duration of such a programme is one year. The au pair works approximately 45 hours a week and in this time has to: - Take up the role of a second mother - Dress, feed and bath small children - Keep children busy, play with them and tidy their rooms - Drive older children to school and extra-mural activities - Supervise children with their homework - Take children on excursions - Attend school and cultural activities. The au pair also travels with the family and performs necessary au pair duties during the trip. In exchange for the work done the au pair receives: - A furnished room - Free accommodation and meals - Pocket money - The use of a vehicle or access to transport - The opportunity to accompany the family on holidays and excursions - Exposure to the culture, language and way of living of foreign people. NOTE: It is very important to make use of a registered and trustworthy au pair agency to arrange everything.			
Related Occupations – which occupations are more or less the same?			
- Educarer - Child-care worker - Home-care worker - Hospice worker - Pre-primary school teacher - Social worker			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
No specific requirements. COMPULSORY SUBJECTS: English RECOMMENDED SUBJECTS: Foreign Languages			

Entry to Work Place			
ADDITIONAL REQUIREMENTS: A prospective au pair must: - be between 17 and 30 years old (depending on the country); - be single; - have no criminal record; - be physically and mentally healthy; - undergo a strict selection procedure. The prospective foreign family also undergo a selection procedure. NOTE: During the au pair year the South African and overseas agencies keep in contact with the au pair as well as the guest family.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An au pair should: - love young children and have a genuine concern for their well-being; - communicate well with people; - be calm and patient; - be friendly and cheerful; - be adaptable and flexible; - be practical; - have integrity; - be very responsible and trustworthy; - inspire confidence.

Auctioneer			
General Information			
Description – what is this occupation?			
The auctioneer is a salesperson responsible for the selling of an owner's goods for example, cattle, cars, furniture, books, antiques and clothes. The seller can pay the auctioneer a salary or a commission (a certain percentage of the profit).			
Typical Job Activities – what will I do in this occupation?			
At the day of the auction all the potential buyers must register with the auctioneer where they get a number to bid with. Just before the sale the auctioneer introduces and describes all the items or goods. The goods are appraised and items are assembled either in lots or individually depending on the value of the items. The auctioneer will try to obtain the highest price for the seller, while at the same time, exercising care about the rights of the buyer. After a sale has been made the sales clerk who assists the auctioneer will record all the sales in a sales register. The sales clerk also receives all the cash payments and helps the auctioneer with the balancing of the sales register.			
Related Occupations – which occupations are more or less the same?			
- Auctioneers generally act as agents for private sellers - Executors - Trustees - Attorneys - Banks - Realtors - Church organisations - Charitable organisations - Auction houses - Automobile dealers - Livestock markets - Self-employed			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: African Languages, Afrikaans, English, Accounting			

Entry to Work Place			
IN-SERVICE TRAINING: A prospective auctioneer must undergo intensive in-service training as auction clerk and general assistant at a auction company who is registered with the South African Institute of Auctioneers. Training is four to five years. In this process he adopts his own personal auction character and method of carrying out his multiple duties. He comes into direct contact with auctions and sellers and buyers and learns what factors motivate them to sell or buy. The training is predominantly practical. Some form of extra training regarding sales principles and public relations would be of great assistance. The school-leaver interested in an auctioning career works as a clerk until he is regarded sufficiently advanced to become an auction clerk and auction assistant. He then acts as sales clerk for approximately two years, depending on his own characteristics, willingness to learn, initiative and behaviour. He also becomes acquainted with the legal aspects of selling and buying, which are important aspects of this career.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An auctioneer should: - have excellent physical health, eyesight and mobility; - have staying power; - be resourceful; - have a well-modulated voice and be able to speak clearly and rapidly; - be interested in people and have public relations skills; - have an inquiring mind; - have a strong personality; - be reliable, honest, trustworthy and responsible; - have self-motivation and initiative; - be fluent in two or more official languages.

Automotive Electrician			
General Information			
Description – what is this occupation?			
An automotive electrician manufactures, installs, repairs and maintains electrical systems in motor vehicles			
Typical Job Activities – what will I do in this occupation?			
Motor vehicles have two electrical systems, namely an ignition system and an accessory system. The automotive electrician is mainly concerned with the accessory system, which comprises the starter motor, generator, lights, windscreen wipers, indicators, hooter, as well as electrically-operated windows, aerals and radios. The automotive electrician should, however, also have a thorough knowledge of the ignition system since defects in the accessory system may have a detrimental effect upon the vehicle's electrical system as a whole. The automotive electrician does a fair amount of routine work such as replacing bulbs and setting regulators. Specialised work includes tracing faults with special equipment			
Related Occupations – which occupations are more or less the same?			
- Aircraft instrument mechanic - Aircraft radiotrician - Electrician - Electro-mechanician (millwright) - Motor mechanic - Ship's electrician - Stage and studio electrician - Strander: electrical equipment - Technical assistant: electronic engineering			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate. Some employers demand higher qualifications. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics, Electrician Work, Technical Drawing, Trade Theory			

Entry to Work Place

I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Automotive Machinist			
General Information			
Description – what is this occupation?			
The automotive machinist builds, assembles and renews internal combustion engines and engine components according to the specifications of the manufacturer. You will perform a variety of machining operations on engines and engine components.			
Typical Job Activities – what will I do in this occupation?			
When the engine of a vehicle is worn out, it burns too much oil and fuel and has to be rebuilt. This process includes dismantling and cleaning of the engine. The automotive machinist: - inspects all the components thoroughly for cracks and other faults - rebuilds the parts - cleans the parts thoroughly - mounts the engine - uses a dynamometer to test if the engine functions correctly. The work is very precise and the working conditions relatively clean and pleasant.			
Related Occupations – which occupations are more or less the same?			
- Automotive engine fitter - Automotive plater - Fitter and turner - Instrument maker - Machine and tool setter - Millwright - Motor cycle and scooter mechanic - Motor mechanic - Tool and jig maker - Tractor and agricultural machinery mechanic			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 10 Certificate. Some employers demand higher qualifications. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Metalwork, Technical Drawing, Motor Mechanics, Motor Vehicle Construction, Trade Theory			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become an automotive machinist you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical (FET) college or a correspondence course at Technisa. - Practical training: In-service training under supervision of a qualified tradesman. - Duration of course: 85 weeks, depending on the progress of the candidate in the modular system. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become an automotive machinist you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An automotive machinist should: - be able to work independently; - be able to concentrate on details; - perform work very accurately; - enjoy working with his hands; - have mathematical aptitude; - be able to work with mechanical tools; - have finger and hand dexterity; - have good eye-hand co-ordination; - possess good physical health and stamina; - have good eyesight and hearing

Baker			
General Information			
Description – what is this occupation?			
Large bakeries today are completely mechanised and in many cases fully automated. The baker in these plants supervises employees who operate the machinery which mixes, moulds, proves, bakes, cools and wraps products.			
Typical Job Activities – what will I do in this occupation?			
In small bakeries, the baker does more work by hand with fewer mechanical devices. Using recipes or formulas, the baker: - selects the amount and type of flour, yeast and other ingredients - shapes the dough - if necessary allows the products to rise - puts them in the oven to bake. Confectionery allows for more specialisation and variation than does bread. A variety of tarts, pies, pastries, cakes and biscuits. are made on a large scale. There is a wide range of occupations in the baking industry, ranging from the unskilled worker to the graduate.			
Related Occupations – which occupations are more or less the same?			
- Baking technologist - Caterer - Chef - Cook - Guesthouse manager - Home economist - Home economics teacher - Hotel/motel manager			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate.			
Entry to Work Place			
IN-SERVICE TRAINING: Major baking groups offer in-service training.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A baker should: - be scientifically and technically inclined; - be artistic (the confectioner who does decorative work); - be willing to perform repetitive tasks; - be neat and orderly; - have a good knowledge of basic science and arithmetic for modifying recipes and formulas; - be able to organise well. Bakers should also have: - good health and physical stamina; - finger and hand dexterity

Barman			
:			
General Information			
Description – what is this occupation?			
The barman serves alcoholic and non-alcoholic drinks to customers or prepares drinks which waiters serve to customers			
Typical Job Activities – what will I do in this occupation?			
As a barman, you will mix drinks according to standard recipes or customers' requests and usually collect payment for the drinks. You will also need to know what type of glass to serve each kind of drink in. A barman keeps the bar well supplied with spirits, beer, mixers, garnishes, ice and other supplies. Glasses, mixing equipment and ashtrays are also cleaned by the bartender. In addition the bar itself must be kept spotlessly clean. The barman arranges glasses, bottles, mixers and other supplies in an attractive yet convenient way. A barman plays a vital role in the running of any restaurant, hotel or bar. You will deal directly with customers and should thus understand them, make them feel welcome and recognise them when they return.

Beekeeper			
Alternative titles: Apiarist			
General Information			
Description – what is this occupation?			
The beekeeper/apiarist looks after hives of bees, collects the honey and sells it for a profit. If you want to be a beekeeper, you will have to make sure that the bees are close to plants and trees with flowers/blossom that make nectar. You can also transport the hives to an orchard or field.			
Typical Job Activities – what will I do in this occupation?			
In winter you will feed the bees with sugar. You will furthermore make sure that diseases are avoided, and you will take care to prevent the bees from swarming. A beekeeper extracts honey from the honeycombs twice a year using a machine (spinner) and puts the honey into labelled jars and sells it direct to the public or to shops, cafes or garden centres, etc. A beekeeper may also produce other items such as soaps, lip balms, candles, etc.			
Related Occupations – which occupations are more or less the same?			
- Entomologist - Animal scientist - Nature conservator - Ecologist - Environmental health officer			
Educational Requirements - which qualifications do I need to enter this occupation?

Billet Provider			
General Information			
Description – what is this occupation?			
Steel is provided in the form of metal bars called billets. The person responsible for supplying steel billets to the reheating furnace and the roller mills is called a billet provider.			
Typical Job Activities – what will I do in this occupation?			
The billet provider receives a roll-release note with the number, quality and lengths of billets required for manufacturing a specific product. The required billets are then ordered by telephone and supplied to the roller mills. The billet provider also: - checks the reports of the shift mill recorder on the number and quality of billets unloaded, stacked in the billet yard and supplied to the reheating furnace during each shift - compiles a stock report indicating the tonnage of billets available in the billet yard - receives reports on analyses from the laboratory and records this information.			
Related Occupations – which occupations are more or less the same?			
- Fibre weaver - Lace weaver - Metal buffer - Rigger - Sheetmetal worker - Welder			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 10 Certificate or N1. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Metalwork			
Entry to Work Place			
IN-SERVICE TRAINING: A candidate receives practical in-service training and 26 days of theoretical training. The candidate must progress through the following stages: - Billet yardsman. - First control driver. - First heater. - Third roller. - Shift mill recorder.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A billet provider should; - be reliable and responsible; - communicate well in speech and writing; - maintain good human relations; - have technical inclination; - have mathematical ability; - be physical fit.

Biochemist			
General Information			
Description – what is this occupation?			
A biochemist studies the chemical composition of living things and deals with phenomena that distinguish the living from the non-living in chemical and physical terms. The biochemist works with animals, plants or micro-organisms and endeavours to breach the gap between the highly integrated activity of the living cell (a biological unit) and the properties of its individual components.			
Typical Job Activities – what will I do in this occupation?			
The nature of the work is determined by the field the biochemist may work in. You may: - do research on new products - conduct research into ways of re-using waste materials - develop methods for the purification of water - work in the industry where products are manufactured through chemical processes and reactions (biotechnology) - be involved in the control and purification of foods - develop antibiotics and test the reaction of the human body to certain medicine - may be involved in genetics and forensic science.			
Related Occupations – which occupations are more or less the same?			
- Agriculturist - Biologist - Botanist - Chemist - Entomologist - Horticulturist - Microbiologist - Pharmacist - Physical Science teacher - Veterinary surgeon - Zoologist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology			
Entry to Work Place			
UNIVERSITY: BSc degree: Any South African university. Since biochemistry forms a link between the physical (exact) sciences such as Chemistry and Physics, and the biological sciences such as Botany, Zoology, Physiology and Microbiology, training with Biochemistry as one of the majors offers the particular opportunity of making a choice between careers existing in either of these fields. Post-graduate study: Further study up to doctoral level is available and is needed for lecturing, high-level research and for advancement to management and administrative positions.			

What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A biochemist should: - have above average intelligence; - be interested in science; - have an aptitude for Mathematics and Chemistry: - be curious; - think analytically; - have good eye-hand co-ordination: - work accurately; - be able to work independently and as part of a team; - have patience and perseverance; - be able to communicate well in writing and in speech

Biokineticist			
General Information			
Description – what is this occupation?			
A biokineticist is a human-movement and exercise specialist who improves people's physical condition and quality of life by means of physical assessment and the prescription of healthy exercise habits.			
Typical Job Activities – what will I do in this occupation?			
Exercise routines are prescribed either as a preventive health measure or to correct a health problem such as a sport injury or recovery from disease or illness. The biokineticist works closely with the clients' doctors and other medical practitioners. A biokineticist: - evaluates a person's physical condition - prescribes safe physical activity programmes - compiles rehabilitation exercise programmes. Scientific methods and instruments such as a treadmill, bicycle ergometer, pulse frequency monitor etc. are used in the evaluation of a person's condition. The biokineticist identifies exercise risks in a person and assesses the different basic components of fitness namely the heart and respiratory systems, muscle strength, muscle and joint flexibility, speed of movement, skill, co-ordination and posture.			
Related Occupations – which occupations are more or less the same?			
- Biochemist - Biologist - Biophysicist - Medical physicist - Physical education teacher - Physiotherapist - Physiologist - Physicist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology			
Entry to Work Place			
POST-GRADUATE TRAINING: A honours degree in Human Movement Science specialising in Biokinetics. ADDITIONAL REQUIREMENTS: After the honours degree has been obtained, the biokineticist must do an internship (one year) at an accredited centre before he may register with the Interim National Medical and Dental Council of South Africa.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A biokineticist should: - have an interest in sport and physical activity; - enjoy working with people; - be able to motivate people; - work as part of a team; - be willing to work irregular hours

I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Biologist			
General Information			
Description – what is this occupation?			
The biologist is concerned with animal and plant life, both in the laboratory and in nature. As a biologist, you will investigate the origin, structure and function of organisms and their relationship with the environment.			
Typical Job Activities – what will I do in this occupation?			
You can be involved in the study of plants (botany) or animals (zoology). The biologist may collect and analyse field data, identify pests and diseases, assess effects of chemicals, develop routine tests or devise more efficient production processes. There are opportunities to specialise in one of the many branches of the discipline.			
Related Occupations – which occupations are more or less the same?			
- Ecologist - Geneticist - Marine Biologist - Microbiologist - Physiologist - Zoologist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology			
Entry to Work Place			
Applicable qualification			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A biologist should: - have a scientific approach; - be able to give attention to detail; - have good judgement; - be precise and methodical; - be patient and have perseverance; - be able to work independently and as part of a team.			

Employment Indicators – what are the important employment facts regarding this occupation				
Employment Opportunities in South Africa for this Career				
Exceptionally High	High	Moderate	Low	
Supply of People The number of people with the qualifications, skills (able to do it) or interest in this career, that I have to compete with				
Exceptionally High number of people	High number of people	Moderate number of people	Low number of people	
Income Potential Estimated average income for people in this occupation (excluding extreme examples of high or low income):				
R300 000+per year	R144 000 - R300 000	R60 000 - R144 000	R 60 000 per year	
Income based on Performance What is the chance to improve my pay in this occupation through exceptional performance, skills or business ideas?				
Exceptionally High	High	Moderate	Low	
Self Employment Can I use this career to work for myself or to start a small company in this career field?				
Exceptionally High	High	Moderate	Low	
General Management Opportunities What is the potential to use this occupation as a platform to become a general manager in a medium to big company or organisation?				
Exceptionally High	High	Moderate	Low	
International Employment Market What is the chance of being able to use this career's qualifications and skills in the international labour market?				
Exceptionally High	High	Moderate	Low	
Possible Employers – where do I find this occupation?				
Government (national, provincial, local councils and government related organisations like universities, semi-government, etc.	Big private companies	Medium or small companies	Own small business: Entrepreneurial opportunities in this field	Self-employed: Contractor, consultant, own practise, freelance
- Research institutes and organisations - Universities - Government departments - Agricultural Research Council - Department of Agriculture - Fertiliser manufacturers				
Relevant Contact Details – where can I get more information on this occupation?				
- The Zoological Society of SA, Department of Zoology, University of the Witwatersrand, Private Bag 3, Wits, 2050. Tel: (011) 7171000. - The Society of Medical Laboratory Technologists of SA, P.O. Box 6014, Rogge Bay, 8012. Tel: (021) 4194857.				

Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Work performance	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities			The growth of private companies (big and small)	
Technology		Direct consumer demands – “man in the street”			My own performance and skills	
Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature		

Biomedical Scientist			
General Information			
Description – what is this occupation?			
The biomedical scientist carries out a wide range of laboratory tests on samples of blood, tissue and body fluids to assist doctors in the diagnosis, monitoring and treatment of patients. Patient care is supported throughout the many hospital departments including accident and emergency units, intensive care units and operating theatres. Tests are conducted for diseases such as anaemia, cancer, diabetes, and HIV/AIDS.			
Typical Job Activities – what will I do in this occupation?			
The biomedical scientist may prepare tissue samples from autopsies and surgical operations to establish the cause of death or disease. Highly sophisticated and computer-controlled equipment are used, together with other high-tech equipment such as microscopes and electron microscopes. Furthermore, a computer is used to keep careful laboratory records of investigations and research.			
Related Occupations – which occupations are more or less the same?			
- Biologist - Geneticist - Microbiologist - Physiologist - Biochemist - Biomedical engineer - Chemist - Immunologist - Pathologist - Pharmacist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training

Biomedical Technologist			
General Information			
Description – what is this occupation?			
The biomedical technologist works in a laboratory and provides analytical information important for the prevention and cure of diseases to medical doctors and pathologists.			
Typical Job Activities – what will I do in this occupation?			
The work of the biomedical technologist is divided into four main categories: -Diagnostic work: This forms the major part of biomedical technology and includes: -- haematology (the study of blood) -- chemical pathology (analysis of body fluids) -- histopathology (the study of diseases that affect body tissues) -- microbiology (the study of bacteria, fungi and viruses that can cause diseases) -- cytology (analysis of cells that the body normally exfoliates). - Blood transfusion technology: The biomedical technologist in the blood transfusion technology field conducts tests on blood to determine blood groups and diseases like aids and hepatitis. One must be extremely careful because most of the time one works with infected material. - Research: - The preparation of serums and vaccines: As a biomedical technologist you will not work directly with patients. Rather, you will form part of a laboratory team and may have to train and supervise laboratory assistants and other technologists.			
Related Occupations – which occupations are more or less the same?			
- Artificial insemination technician - Biochemist - Biomedical engineer - Chemist - Immunologist - Microbiologist - Pathologist - Pharmacist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate for a diploma course. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology, Technical Drawing			
Entry to Work Place			
REGISTRATION: A final examination after the theoretical and practical training will enable the student to register with the Interim Medical and Dental Council of South Africa as biomedical technologist. A person with an appropriate BSc degree may also qualify.			

What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A biomedical technologists should: - have good judgement and decision-making ability; - be responsible; - be a conscientious and extremely accurate worker; - be interested in and have an aptitude for medical science; - concern for human welfare; - adhere strictly to the professional code of ethics; - be willing to work shifts and do after-hours emergency work. Medical laboratory technologists need: -good health; -manual dexterity; -normal colour vision.			
Employment Indicators – what are the important employment facts regarding this occupation

Bird-Farm Manager			
General Information			
Description – what is this occupation?			
Bird-farm managers specialise in any bird from exotic bird species to chickens. The farmer takes special care of birds and ensures that the birds stay in a healthy condition and nothing can harm them.			
Typical Job Activities – what will I do in this occupation?			
Many bird-farm managers breed with exotic birds and sell them to pet shops, customers, or export them to other countries. Bird-farmers need a special permit before they are allowed to do this, however. Bird-farm managers also have chicken or poultry on their farms. The basic duties of a manager includes keeping the birds away from their natural enemies, feeding them properly and sheltering them from extreme weather conditions, such as winds that might destroy or damage nests. Bird-farmers need to ensure that every bird is kept in an environment that is similar to it's natural habitat. Bird-farm managers need to have an extensive knowledge of various bird species and their anatomy in order to run a successful bird-farm. They also need to detect when birds are unstable, or uncomfortable in any way. They can detect a bird's off behaviour by comparing it to its normal behavioural pattern.			
Related Occupations – which occupations are more or less the same?			
- Farmer - Zoologist - Bird trainer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
No specific requirements.			
Entry to Work Place			
No specialised training is available to become a bird-farm manager, however a keen interest in birds is a prerequisite. These managers may find it helpful to do a course in Business Studies.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
You need to be at least 16 years of age. You need to be practical and enjoy working outdoors and with animals.			
Employment Indicators – what are the important employment facts regarding this occupation

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Blacksmith			
General Information			
Description – what is this occupation?			
A blacksmith uses modern mechanical tools and other machinery to manufacture objects from steel and metal e.g. architectural steel structures, crowbars and picks.			
Typical Job Activities – what will I do in this occupation?			
The blacksmith forges metal parts to make or repair an object. This is done by first heating the metal to soften it. When softened, the object is picked up with a pair of tongs and placed on the anvil where it is hammered or pressed into the desired shape. Broken parts are rejoined by hammering them together. The blacksmith may have to reheat the object to keep it workable while it is being shaped, repaired or finished. This process is used to sharpen metal or hand tools. The metal is also tempered or hardened by heating the object to a high temperature and then cooling it. The blacksmith (farrier) may also repair horseshoes using ready-made or custom-designed shoes. Other aspects of the work include making and interpreting drawings. The blacksmith should be able to estimate material requirements from the drawings. You will also be responsible for preparing, lighting and using open hearth, gas or oil-fired furnaces.			
Related Occupations – which occupations are more or less the same?			
- Agricultural metal worker - Ballast man: railways - Blacksmith's striker - Blaster - Charcoal burner - Construction and steel worker - Coppersmith - Drill sharpener - Flame cutter - Forging press operator - Quarryman - Red lead burner - Sheetmetal worker - Tool, jig and die-maker - Tool designer - Welder			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate. Some employers prefer higher qualifications. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Trade Theory, Metalwork, Mathematics			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a blacksmith you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical (FET) college. - Practical training: In-service training under supervision of a qualified tradesman. - Duration of course: 4 years. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become a blacksmith you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A blacksmith should: - enjoy working with his hands; - be imaginative; - have good judgement; - be a precise methodical worker; - have an eye for shape and line; - be patient to work with horses; - have physical strength and stamina; - have good hearing and vision.

Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further Studies in the related career field	Experience in specific field	Work performance	Work performance	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Further studies in related fields	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities		The growth of private companies (big and small)		
Technology		Direct consumer demands – “man in the street”		My own performance and skills		

Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Boatbuilder and Shipwright			
General Information			
Description – what is this occupation?			
The boatbuilder and shipwright is responsible for building, altering, renovating, repairing and maintaining boats and ships.			
Typical Job Activities – what will I do in this occupation?			
You will usually be provided with a plan and specifications of the boat you have to build or repair. Sometimes however, you will only receive general instructions and you will have to work from your own designs and sketches. The boatbuilder and shipwright works mainly with wood. You will select the material required for the job e.g. timber, plywood and hardboard. You will begin by marking the design on the wood and you will have to be precise in using tools such as a ruler, centre punch, scribe and a square. You will then cut and assemble the various parts according to the drawings made. When all the parts have been shaped, you will assemble them by making use of various kinds of joints such as dovetailed, doweled, grooved, lapped and tongued joints. Steam is used to bend the wood. Then you will glue the parts together and strengthen the joints with nails, bolts, cleats and screws. A boatbuilder and shipwright also ensures that the boat is waterproof. You will need to apply filters, sealant and fibreglass and when the construction work is complete and all the parts have been varnished or painted. You will also be required to do repair work and replace worn-out wooden parts such as steps and masts. The boatbuilder and shipwright can work outdoors on a boat that is afloat or in a dry dock, or indoors on a boat in a workshop.			
Related Occupations – which occupations are more or less the same?			
- Boilermaker - Carpenter - Fibreglass worker - Joiner - Roofer - Sheetmetal worker - Welder			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate. Some employers prefer higher qualifications. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics, Woodwork			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a boatbuilder and shipwright you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical (FET) college. - Practical training: In-service training under supervision of a qualified tradesman in the major harbour cities where there are dockyards. - Duration of course: 3 to 4 years depending on the experience of the candidate and his qualifications prior to the apprenticeship. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become a boatbuilder and shipwright you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A boatbuilder and shipwright should: - like to work with his hands; - be interested in working with wood; - have neat, orderly work habits; - work with great precision.

Body Make-Up Artist			
General Information			
Description – what is this occupation?			
Body make-up artists use oils, watercolours and other materials to paint people's bodies. Body make-up artists are usually classified as commercial artists, rather than fine artists, because they do not choose their own theme or subject matter in most cases.			
Typical Job Activities – what will I do in this occupation?			
Body painting dates back to many years ago. The Indians use to paint their bodies and horses when preparing for battle. It used to be a big occasion and natural plants were used to obtain various colours. Today, body painting is done for advertising and museums. For wax museums artists make the wax statue look like a human being, e.g. in London in Madame Tussauds' wax museum there are famous celebrities such as Nelson Mandela and Princess Diana. These artists produced line, colour, space and their elements to obtain the desired effect. Body make-up artists need to have good business management skills if they intend to support themselves by making this their career. Most artists have other jobs as well, as this is a very difficult field to earn a living in. With the proper background and training, most artists find a job associated with art			
Related Occupations – which occupations are more or less the same?			
- Artist - Painter - Sculptor			
Educational Requirements - which qualifications do I need to enter this occupation?

Boilermaker			
General Information			
Description – what is this occupation?			
A boilermaker manufactures and builds structures of steel plates, ranging from boilers for steam engines and pressure vessels for power stations and petrochemical plants to mine head gears, bridges and oil drilling platforms.			
Typical Job Activities – what will I do in this occupation?			
The boilermaker has to develop a drawing in separate sections and has to make many calculations in this process. Once you have established your job procedure you will mark out the plate and cut it to the correct dimensions, using cutting torches or guillotines. Then it is bent into the required shape. This is done manually using hand tools or mechanically by using bending brakes, rolling machines and heating procedures. Following this, you will assemble the various parts and prepare them for welding. The boilermaker is also responsible for the cleaning and inspection of boilers to ensure that these boilers work effectively. It is estimated that boilers last for a very long time. The work is therefore mostly devoted to maintain and repair boilers. The boilermaker works indoors in noisy workshops or factories, and outdoors on construction sites.			
Related Occupations – which occupations are more or less the same?			
- Automotive body repairer - Bar mill roller - Cabinet-maker - Electroplater - French polisher - Millwright - Pipe fitter - Sheetmetal worker - Shipwright - Welder			
Educational Requirements - which qualifications do I need to enter this occupation?

Bonsai Culturist			
General Information			
Description – what is this occupation?			
Bonsai culturists grow dwarf trees.			
Typical Job Activities – what will I do in this occupation?			
After they have selected a suitable tree for bonsai, they add chemicals to the soil and prune the branches and roots to stunt the growth. Bonsai shapes are influenced by symmetrical shapes. To be a successful bonsai culturist, one needs to capture the specific atmosphere of these trees. Beginners find group planting great fun although, as time passes by, it may become a problem caring for the trees as each one has an individual need and one tree may upset the other. A bonsai tree needs a lot of care and attention, but it brings the feeling of tranquillity to the minds of those who cultivate these "miniature" trees.			
Related Occupations – which occupations are more or less the same?			
- Culturist - Apiculturist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training

Bookbinder			
General Information			
Description – what is this occupation?			
A bookbinder makes a book from flat sheets or folded sections of paper. You will be responsible for binding the book together as well as making the various types of covers to hold the book-block together.			
Typical Job Activities – what will I do in this occupation?			
A well-equipped bookbinding shop contains a variety of specialised machines for cutting, folding, gathering, stitching, glueing, forming, case-making, etc. The bookbinder has to be able to operate all these machines. Printed sheets are generally folded into sections of 16 or 32 pages and arranged into proper order. Plates are inserted at the assigned places. Next, the book is sewn together and/or the spine glued. Colouring or gilding may be applied to page edges. The cover is prepared and the cover and book are then put together. In hand binderies where they specialise in special bindings, original bindings and the restoration of rare and valuable books, the above-mentioned operations are performed by hand. The bookbinder works in a well-lit and ventilated shop among noisy machines.

Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 10 Certificate for an apprenticeship at a company. Senior Certificate for full-time training at the South African Printing College. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: None			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a bookbinder you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At the Southern African Printing College (full-time) or through their Distance Learning Department (part-time). - Practical training: In-service training under supervision of a qualified tradesman (Competency-Based Modular Method). - Duration of course: 2 to 4 years depending on the experience of the candidate. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become a bookbinder you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A bookbinder should: - be neat and accurate; - be alert, patient and careful; - show a sense of responsibility; - have mechanical and finger skill; - be able to operate machines and other mechanical tasks efficiently.

Bookkeeping Machine Operator			
General Information			
Description – what is this occupation?			
The bookkeeping machine operator work with typewriter-like machines to record data and to maintain one phase or a complete set of financial transactions			
Typical Job Activities – what will I do in this occupation?			
The operator runs complex machines that add, subtract, multiply, divide and find the square root of numbers. These calculators are used to prepare payrolls, compute production costs and perform other statistical operations. The operator first sorts the records to be posted, such as cheques, and debit and credit items and then the required forms are selected and put into the machine and the carriage is set. Thereafter the information is entered. The operator also verifies entries and summarises and balances totals to ensure accuracy. Other office machines such as calculators and adding machines may also be used. In addition, some operators prepare periodic trial balances and other statistical information. These operators often work under pressure, especially at the end of the month.			
Related Occupations – which occupations are more or less the same?			
- Calculating machine operator - Computer terminal operator - Computing machine operator - Photocopier operator - Statistical clerk - Telex operator			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 10 Certificate. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Business Economics, Accounting, Typing, Mathematics			
Entry to Work Place			
IN-SERVICE TRAINING: Short training courses are usually provided by the employers. FURTHER TRAINING: Business courses are also offered by some technical(FET) colleges and by some correspondence colleges. ADVANCED TRAINING: Some companies offer training courses in: - Commercial Arithmetic - Typing - Business Machine Operation			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A bookkeeping machine operator should: - have mathematical ability; - be accurate and have manual dexterity; - have good eyesight; - enjoy detailed work; - work well under pressure; - be able to concentrate under noisy conditions; - be neat and orderly; - be dependable and honest; - work well with others.

Bricklayer			
General Information			
Description – what is this occupation?			
A bricklayer builds walls, floors, partitions, fireplaces, steps, free-standing piers, arches and all other structures made up brick, concrete block or masonry materials. You may specialise in one type of masonry material, such as firebrick or cinder block work.			
Typical Job Activities – what will I do in this occupation?			
A bricklayer first studies the blueprints to check specifications and determine the most accurate layout. Mortar is then mixed and a layer or bed of mortar is spread as a base after which bricks are positioned by hand to assure a neat, uniform appearance. Excess mortar is cut off. Mortar joints are then finished off so that moisture cannot penetrate. As a bricklayer you will have a thorough knowledge of the different types of bricks that are available as well as the correct mortar mixtures. You will also know how to adapt building methods to suit different weather conditions. You may be required to weld metal supports for bricks and supervise helpers. Bricklaying is hard but satisfying work. A bricklayer sometimes has to work in harsh weather conditions as well as long hours to meet deadlines.			
Related Occupations – which occupations are more or less the same?			
- Carpenter - Cement mason - Construction worker - Marble mason - Mosaic worker - Plasterer - Stonemason - Tiler - Welder			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate. Grade 10 Certificate or N1 is recommended. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics, Trade Theory			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a bricklayer you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical(FET) college to obtain a N2 plus Institutional Competency-based Modular Training at a BIFSA Training College or any other accredited training centre. - Practical training: Practical site experience with an employer. - Duration of course: 2 to 4 years depending on the experience of the candidate. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become a bricklayer you must be at least 16 years old. Training should comply with the Production Performance Criteria of BIFSA. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A bricklayer should: - enjoy working with his hands; - enjoy working with others; - be able to perform accurate work; - have manual dexterity; - have physical strength and stamina; - be able to visualise a finished project.

The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Building Contractor			
General Information			
Description – what is this occupation?			
A building contractor is an independent construction specialist who bids on specific assignments within a major construction project.			
Typical Job Activities – what will I do in this occupation?			
The construction of one large building might involve many contractors and subcontractors working together towards its completion. The contractor must analyse the specifications of the work and determine the materials, personnel and related costs, which would be required to complete the assigned task. When all of these factors have been considered, a quotation is submitted. If the contract is accepted, the contractor must supervise the purchase of materials and the work of the various skilled artisans and labourers who are assigned to the project.			
Related Occupations – which occupations are more or less the same?			
- Bricklayer - Carpenter - Civil engineer - Painter - Plumber			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma course. Grade 10 Certificate for apprenticeship training. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Accountancy, Economics, Woodwork			
Entry to Work Place			
APPRENTICESHIP TRAINING: Most building contractors begin their careers as artisans such as carpenters, painters, bricklayers, plumbers and electricians. These artisans then gain there contractor's licence to register as artisans.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A building contractor should: - enjoy solving problems; - be able to make decisions; - think about old problems in new ways; - be accurate and persistent; - show good judgement; - have a business inclination; - be able to work with people of all levels from managers to labourers.

Building Surveyor			
General Information			
Description – what is this occupation?			
A building surveyor applies measuring and surveying skills to various tasks required by building contractors and quantity surveyors.			
Typical Job Activities – what will I do in this occupation?			
The building surveyor measures the building work that has been completed on site by means of a very specific system which is standardised throughout South Africa. The information that is obtained from measuring the work is used to issue monthly certificates and also to determine whether the company is running at a profit. Before the commencement of a building project, a quantity surveyor estimates the anticipated cost. This estimate is presented in the form of a complete list of all the items necessary to complete the project and is known as a 'bill of quantity'. The building surveyor then analyses the bill of quantity and prices all the items such as materials, labour and plant costs. In this way a tender amount is arrived at which is submitted for the building contract. A building surveyor can also work for a quantity surveyor where he may: - assist the quantity surveyor in measuring the builders' work - compile bills of quantity - issue monthly valuation certificates - measure variations - prepare the final account.			
Related Occupations – which occupations are more or less the same?			
- Appraiser - Assayer - Builder - Building contractor - Construction quantity surveyor - Quantity surveyor - Town and regional planner - Valuer			
Educational Requirements - which qualifications do I need to enter this occupation?

Business Manager/General Manager			
General Information			
Description – what is this occupation?			
Managers plan, direct and organise the work of a department, company or small business			
Typical Job Activities – what will I do in this occupation?			
They take responsibility for the effective running of a business or department. They decide how goals can best be achieved and take decisions regarding the resources needed (money, people, equipment). Managers plan budgets and time-scales, organise the daily running of the business or organisation and keep staff informed and motivated. You will be based in an office, though you might have to travel to meetings. The work may carry a lot of pressure at times and could involve making difficult decisions. Managers can function on three levels namely: - Top management (board of directors, chairman, managing director, stockholders in a close corporation) - Functional managers (administrative, production, financial, marketing, purchasing and managers of a specific vocational group) - Operational managers (advertising, credit, cost managers). Managers: - ensure that realistic goals are set for a department, business or an organisation - ensure a strategic plan and business plan are set and monitored - oversee the budgets and targets of the business or organisation - are involved in the marketing of the business or organisation - ensure that the organisation remains profitable - monitor the recruitment, training and organisation of staff - provide leadership for an organisation and its members - are responsible for compliance of regulations and policies by the organisation.			
Related Occupations – which occupations are more or less the same?

Possible Employers – where do I find this occupation?						
Government (national, provincial, local councils and government related organisations like universities, semi-government, etc.	Big private companies	Medium or small companies	Own small business: Entrepreneurial opportunities in this field	Self-employed: Contractor, consultant, own practise, freelance		
Every organisation or business needs managers. There are no limits to the employment possibilities for managers, but persons who qualify themselves as managers are seldom appointed as managers immediately after completion of their studies. They will enter the market as first level supervisors who are in charge of operative workers. They will be promoted with time to higher levels of management. Persons who received training as managers, can also start their own businesses.

Cabinet-maker			
General Information			
Description – what is this occupation?			
A cabinet-maker builds and repairs wooden cabinets and high grade furniture.			
Typical Job Activities – what will I do in this occupation?			
The components are received from the wood-machinist the furniture is assembled and then doors, drawers and locks are added. The work of the cabinet-maker involves a great deal of handwork and a traditional approach although you may also work with electric and pneumatic tools. You will work with wood as well as with modern materials such as melamine. You may work in a workshop or on the site where the cabinets have to be installed. The cabinet-maker: - studies blueprints - plans the order of operations - marks outlines of parts on paper or timber according to the specifications - matches materials for colour, grain or texture - sets up and operates machines such as power saws, jointers and mortises to cut and shape wood - trims parts with the use of hand tools to ensure they fit tightly - drills holes for screws or dowels - glues, fits and clamps parts together to form complete units - installs hinges, catches and drawer knobs.			
Related Occupations – which occupations are more or less the same?			
- Carpenter - Factory manager - Frame-maker - Furniture polisher - Joiner - Roofer - Saw operator - Shop fitter - Upholsterer - Woodcarver - Wood machinist

Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 8 Certificate. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Trade Theory, Woodwork, Mathematics			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a cabinet-maker you need to register with an employer. All costs of successful training are borne by the employer. Wage increases during the stages of apprenticeship are dependent on the progress through the system as well as entry level. Entry levels are more practical than academic. The Furniture Industry Training Board (FITB) enables the industry to provide comprehensive training to all its employees: - Theoretical and practical training: Provided by professional trainers at one of the centres of the FITB. Progress depends on the ability to "do" rather than to "know". - Duration of course: 2 to 4 years depending on the progress of the candidate in the modular system. - Final examination: A compulsory trade test at the Centre of Trade Testing at Olifantsfontein as well as accredited training centres. ADDITIONAL REQUIREMENTS: If you want to become a cabinet-maker you must: - be at least 16 years old; - undergo a selection test battery. ADVANCED TRAINING: The Furniture Production Unit of the FITB in Johannesburg offers the following courses: Diploma in Furniture Production: 2 year full-time course for matriculants. Certificate in Furniture Production: 3 months course for employees already in the industry. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A cabinet-maker should: - be patient; - work very accurately; - have imagination; - have good vision; - have spatial perception and a sense of proportion; - good eye-hand co-ordination; - have manual and finger dexterity; - get along well with others; - be able to work well with or without supervision; - take pride in his work.

Call Centre Operator			
General Information			
Description – what is this occupation?			
Call centre operators provide information and advice or sells goods and services to customers by telephone.			
Typical Job Activities – what will I do in this occupation?			
Call centre operators can work in contract call centres (a call centre that does work for other organisations), a utility (water or energy organisation), or on help desks in a variety of industries. Directory assistance operators provide callers with information such as telephone numbers or area codes. Most directory assistance operators work for telephone companies increasingly, they also work for companies that provide business services. Thus, the exact nature of a call centre operator's duties varies according to the products or services that the organisation provides. Call centre operators: - answer telephone calls - take down details of the caller's query - log this information on a computer - process the information - provide the caller with appropriate information or advice - update the database with changes and status of each customer or prospective customer - investigate customer complaints and arrange for refunds, exchanges or credit when appropriate - provide a high level of customer service - sell the caller products or services - handle payments - keep transaction records - follow up calls by sending letters, information kits, faxes or e-mail - phone customers to promote products or services. Call centre operators are employed on a full-time, part-time or casual basis, and may be required to do shift and weekend work.			
Related Occupations – which occupations are more or less the same?			
- Retail Salesperson - Telemarketer - Telephonist - Receptionist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Usually there are no specific educational Requirements for becoming a call centre operator, but some employers require job applicants to have qualifications related to their industry. For example, banks may require applicants to have a background in the finance industry. Sales experience and strong computer and keyboarding skills are definite assets.			

Entry to Work Place			
Call centre operators usually undergo a period of training on their organisation's products or services before they begin answering telephone calls. They also receive training on customer service and telephone skills. Experienced call centre operators can progress to a team leader's position.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
Call centre operators need to have; - good verbal communication skills - good listening skills - a pleasant and friendly manner of communicating - interest in talking to people - clear speech and good hearing - a calm and even-tempered personality - aptitude for working with computers - a sound knowledge of the products and services of the organisation - the ability to work accurately - the ability to think quickly and respond to complaints smoothly and tactfully.

Career Guidance Worker			
General Information			
Description – what is this occupation?			
Community organisations sometimes employ people with suitable professional qualifications, such as teachers or social workers, to assist with career guidance in the community.			
Typical Job Activities – what will I do in this occupation?			
The career guidance worker runs workshops on making career choices, looking for a job, drawing up a CV and letters of application, dressing for interviews and interview conduct. Often there is a library of career literature, which needs to be kept up-to-date. The career guidance worker also responds to letters requesting career information and assists school leavers and older people seeking individual advice. You may have to train volunteers to help you distribute career information, either in response to specific queries or by means of generally distributed pamphlets.			
Related Occupations – which occupations are more or less the same?			
- Auxiliary social worker - Career counsellor - Librarian and information worker - Psychologist - School counsellor - Social worker -			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption is required to enter university for the training in social work and teaching. No specific Requirements for voluntary helpers. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: English, African Languages			
Entry to Work Place			
Refer to the careers SCHOOL COUNSELLOR, TEACHER and SOCIAL WORKER. UNIVERSITY: Appropriate degrees are offered at most universities. A Certificate in Career Guidance is offered at some universities. IN-SERVICE TRAINING: Qualified career guidance workers will train voluntary helpers in the areas in which they can assist.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A career guidance worker should: - possess an appropriate professional qualification; - have empathy with young people; - be able to inspire trust; - have a genuine desire to see people 'get a good start in life'.

I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Carpenter			
General Information			
Description – what is this occupation?			
The carpenter has to cut and shape timber for construction and fitting out of buildings.			
Typical Job Activities – what will I do in this occupation?			
Carpentry can be divided into two main sections: - Construction carpentry: The carpenter erects roofs. - Finishing carpentry: The carpenter does the finer work of putting the finishing touches to a building. The carpenter erects panels and picture rails, makes built-in cupboards and installs carved ornamental woodwork. Work proceeds according to sketches made by a draughtsman or architect. The carpenter decides on the type of wood required and marks, saws and joins the pieces. As soon as the walls are high enough to support doors and window frames they are built into openings left for this purpose by the bricklayer. After the frames have been installed the carpenter fits the doors. The work is then completed by the fitting of handles, locks and bolts. The carpenter lays wood and block flooring, fits kitchen dressers to walls, and repairs damaged woodwork in buildings. The carpenter works closely with other construction workers such as bricklayers, plasterers and tilers.			
Related Occupations – which occupations are more or less the same?			
- Cabinet maker - General maintenance worker - Joiner - Mason - Metal artisan - Metal roll mill worker - Pattern cutter: leather industry, shoes - Pelt stretcher - Plate roller: steel - Roofer - Shopfitter - Wood machinist -			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate. Grade 10 Certificate or N1 is recommended. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics, Woodwork, Technical Drawing, Trade Theory			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a carpenter you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical(FET) college to obtain a N2 plus Institutional Competency-based Modular Training at a BIFSA Training College or any other accredited training centre. - Practical training: Practical site experience with an employer. - Duration of course: 2 to 4 years depending on the experience of the candidate. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become a carpenter you must be at least 16 years old. Training should comply with the Production Performance Criteria of BIFSA. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A carpenter should: - enjoy working with his hands; - be a neat and accurate worker; - have an interest in woodwork; - have good spatial and form perception; - enjoy working with others; - have good health and average strength; - have hand and finger dexterity; - have good eye-hand co-ordination.

Carpet Fitter			
General Information			
Description – what is this occupation?			
The carpet fitter lays floor coverings, such as carpets, vinyl, tiles, etc, for either private customers, or businesses, such as hotels, hospitals, offices, etc			
Typical Job Activities – what will I do in this occupation?			
You will study the plan of a room and calculate the material required for the job, making sure that there is as little waste as possible. You will cut the carpet to fit the size of the room, and stretch the carpet edges over the spiked edging strip to fix it, or glue it to the floor surface. You will make sure that pattern matches and cuts, fits and joins the carpet properly by stitching, taping or gluing. When fitting vinyl or tiles, the carpet fitter needs to check that the floor is level. You may need to prepare the floor surface by scraping off old glue, putting down a layer of levelling compound or sheets of hardboard cut to size.			
Related Occupations – which occupations are more or less the same?			
- Bricklayer - Carpenter - General maintenance worker - Pattern cutter: leather industry, shoes - Pelt stretcher - Roofer - Shopfitter - Upholsterer - Wall and floor tiler

Cartographer			
General Information			
Description – what is this occupation?			
The cartographer draws up and revises maps that provide the map user with information about the earth's surface.			
Typical Job Activities – what will I do in this occupation?			
The cartographer gets the required information from aerial photographs, field reports, historical manuscripts and other charts and statistical reports. The chart is produced using photolithography, drawing and etching techniques. Cartographers work with computer programs and printouts and photogrammetry, which give a three-dimensional perspective of the landscape. Cartography is concerned with four different map processes: - line work (sketching lines and engraving) - colour separation (the preparation of different masks for each separate colour for multi-colour maps) - the positioning of letters and symbols - the reproduction of maps. The types of maps produced depends on the purpose for which the maps are required: - topographical maps - maritime charts - aeronautical charts and maps - climatic maps - road maps, street plans and tourist maps - geographical and geological maps - town and regional structure plans.			
Related Occupations – which occupations are more or less the same?			
- Architect - Architectural Technologist - Draughtsman - Hydrographer - Land surveyor - Topographical engineering surveyor -			
Educational Requirements - which qualifications do I need to enter this occupation?

Cartoonist			
General Information			
Description – what is this occupation?			
A cartoonist prepares satirical or humorous cartoons for publication in most of the visual media such as newspapers and magazines.			
Typical Job Activities – what will I do in this occupation?			
As a cartoonist you can create your own characters and write your own scripts or you can illustrate the scripts of others. Extensive art experience and some writing skills are required. The political cartoonist has to keep up to date with politics, economics and social conditions. A television cartoonist should be very versatile and able to produce anything from comic flash cards to animated cartoons. The cartoonist specialising in advertising must not only be familiar with art techniques, but also with selling and advertising techniques and trends. The work of a cartoonist may be very stressful because of the need to work to deadline. This is especially true of a political cartoonist working for a daily newspaper.			
Related Occupations – which occupations are more or less the same?			
- Animator - Artist - Artist: commercial - Colour consultant - Décor designer - Display artist - Draughtsman - Exhibition designer - Graphic designer - Layout artist - Lithographic artist - Photographer - Textile designer -			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma course. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Art			
Entry to Work Place			
ADDITIONAL REQUIREMENTS: A cartoonist usually assembles his best portfolio to display his work. A good portfolio is essential in obtaining initial employment and freelance assignments, as well as for job changes. A portfolio is also used by some universities and technikons as part of there selection criteria.			

What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A cartoonist should: - be enthusiastic, independent, persuasive and resourceful; - have artistic ability and creativity; - be able to communicate their ideas clearly; - get along well with others; - be able to accept criticism; - have a good sense of humour; - be able to work in a team. Cartoonists need: - manual and finger dexterity; - good eye-hand co-ordination; - good health and physical stamina; - good sketching ability

Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Accounting			

Entry to Work Place			
UNIVERSITY: The study period is 7 years full-time. If you want to become a chartered accountant you need to take the following steps: - BCom (Accounting) at any university in South Africa - 3 year full-time; - BCom Honours (Accounting) - 1 year full-time; - a certificate in theory of accountancy (CTA) - a CTA is equal to an honours degree and means an additional year of study; - enter into articles of clerkship for 3 years with a firm of accountants in public practice; - write the final examination set by the Public Accountants and Auditors Board - this is compulsory for all chartered accountants; - pass the Final Qualifying Examination (FQE) set by the Public Accountants and Auditors Board and serve the period of articles; - apply to the South African Institute of Chartered Accountants for membership. After admission the chartered accountant is able to write the letters CA(SA) behind his name. Provision is made for a student who has obtained a degree in another direction, for example law, to pass the subjects at university according to the minimum Requirements for a CTA. He will also be required to serve a three-year period of articles and pass the qualifying examination. REGISTRATION: To practise chartered accountant must register at the Public Accountants and Auditors Board.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A chartered accountant should: - have integrity, determination and perseverance; - have a strong aptitude for Mathematics; - be intelligent; - be able to analyse, compare and interpret facts and figures quickly; - be able to make sound judgements based on knowledge gained from information; - be able to work accurately and convey recommendations clearly.

Chemist			
General Information			
Description – what is this occupation?			
A chemist's work revolves around examining the composition, structure and properties of different materials, as well as the processes and changes they undergo.			
Typical Job Activities – what will I do in this occupation?			
The chemist works in research and development as well as production and inspection. In the research and development field, the properties and composition of matter and the laws that govern the combination of elements are investigated. You will use your knowledge and research findings to help create or improve products. You may be instrumental in fields such as the development of new paint and drug products. In the fields of production and inspection, instructions are prepared for plant workers, specifying the kind and amount of ingredients to use and the mixing time for each stage in the process. In the inspection area, you will test samples to be sure industry and government standards are met. Chemists may specialise in one of the following disciplines: organic, inorganic, physical, analytical, and theoretical chemistry, as well as biochemistry and industrial chemistry. Many chemists work as teachers and lecturers.

Child Care Worker			
General Information			
Description – what is this occupation?			
A child-care worker is employed by children's homes, places of safety and boarding schools as house parents or house masters.			
Typical Job Activities – what will I do in this occupation?			
The child-care worker is responsible for the physical well-being of the children which involves: - supervising the hygiene and dressing of younger children - helping with homework - supervising at meal times - making sure that the children get medical attention when required and administering medication when they are sick. The most important function, however, is to take care of the children's emotional needs. Children in children's homes and places of safety need extra love and reassurance to help them recover from their traumatic experiences. Children at special boarding schools also require a great deal of physical and/or emotional attention, depending on their particular problems.

Chiropractor			
General Information			
Description – what is this occupation?			
A chiropractor diagnoses and treats patients with health problems associated with the neuro-musculo-skeletal system.			
Typical Job Activities – what will I do in this occupation?			
It is believed that interference with this system impairs the normal functions of the body and lowers its resistance to disease. The chiropractor: - takes the patient's medical history - examines the patient physically, sometimes using x-rays - treats the patient primarily by manual manipulation or adjustment of parts of the body, especially the spinal column - may use adjunctive therapies such as acupuncture and ultrasound - prescribes a diet, exercise and rest. A chiropractor does not prescribe drugs or perform surgery. If necessary, the patient will be referred to another medical practitioner.			
Related Occupations – which occupations are more or less the same?			
- Biokineticist - Clinical technologist - Homoeopath - Medical laboratory technologist - Medical representative - Nurse - Occupational therapist - Physiotherapist -			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology			
Entry to Work Place			
This is a five year course: - three years of traditional medical subjects with emphasis on diagnostic skills; - two years of training to provide clinical skills to manipulate or adjust the spine and other articulations. During the fifth year of study, the student has contact with patients and is required to complete a specified training programme as well as a certain number of hours in an clinic. ADDITIONAL REQUIREMENTS: The prospective candidate must undergo a selection procedure. A qualified chiropractor has to register with the South African Chiropractic, Homoeopathic and Allied Health Services Council to enjoy full professional status.			

What level of natural skill and/or aptitude do I need for this occupation?				
Exceptionally High	High	Moderate	Low	
A chiropractor should: - be a keen observer to detect physical abnormalities; - have hand dexterity to perform manipulations; - have sympathy with patients who are in pain; - be able to work independently; - be responsible; - like to work with detail.

Clothing Designer			
General Information			
Description – what is this occupation?			
A clothing designer applies his knowledge of style, line, colour, proportion and fabrics to the task of designing clothing.			
Typical Job Activities – what will I do in this occupation?			
The industry covers a broad spectrum and a designer may slot in at various levels of creativity. It is a very competitive field and only a few designers become trend setting fashion leaders, who are drawn from the ranks of couturiers and custom-designers. Most clothing designers are employed by factories manufacturing garments for the mass market. Fashion styling also falls into this field and entails the selection and adaptation of high-fashion garments for lower-budget production for the mass market. A designer may decide specialise in certain types of clothing, such as footwear, hats or sportswear			
Related Occupations – which occupations are more or less the same?			
- Artist - Clothing manager - Costume designer - Fashion buyer - Fashion journalist - Fashion marketer - Graphic designer - Illustrator - Knitter - Pattern-maker - Sewing-machine operator - Tailor - Textile designer			
Educational Requirements - which qualifications do I need to enter this occupation?

Coal Technologist			
General Information			
Description – what is this occupation?			
A coal technologist is concerned with the recovery and utilisation of all forms of coal and its by-products.			
Typical Job Activities – what will I do in this occupation?			
The coal technologist can work in one of the following major areas: - Geology: The coal technologist specialising in geology conducts geological surveys to determine the location, extent and quality of coal deposits. You will be closely involved in drilling programmes to determine whether a coal-field can be mined economically. You will also decide what the coal can be used for, e.g. electricity generation or gasification for the making of petroleum products. - Mining: The coal mining technologist regularly takes and analyses samples of the coal face, and reports results to the mine engineer and manager. You will determine the presence of methane gas as well as other explosive coal derivatives and assist in the washing plant and in grading. You will provide management with valuable information, which can be used to run the mine at a high profit margin. - Coal preparation and processing: This field entails product evaluation, quality control and aspects related to the use of coal in power stations. This technologist is employed by Sasol, the petrochemical and metallurgical industry, as well as in the fields of domestic heating and pollution control. - Coal analysis: The coal technologist evaluates the product in terms of specialised variables and properties. Chemical, analytical and physical tests are done depending on the nature and application of the product. - Research: Research is conducted to determine how this natural resource can be best utilised for the benefit of mankind. This coal technologist continually strives to improve existing techniques and methods in the coal industry.

Colour Consultant			
General Information			
Description – what is this occupation?			
A colour consultant is a person who has exceptional skills in using colour to maximum effect			
Typical Job Activities – what will I do in this occupation?			
The primary function of a colour consultant is to advise interior designers, architects, textile manufacturers and private domestic clients on the effective use of colour. The colour consultant is often asked to co-ordinate the colour scheme for a whole job. The degree of freedom that they have will depend entirely on the client. It is therefore important that a colour consultant carefully listens to the client's instructions and interprets them accurately. In addition to familiarity with colour theory, a colour consultant requires sound technical knowledge of dyes, fabrics, fabric production processes, paints and surface treatments (such as different wall and ceiling finishes).

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Comedian			
General Information			
Description – what is this occupation?			
Comedians are entertainers who use various techniques to make an audience laugh.			
Typical Job Activities – what will I do in this occupation?			
This sounds like a very easy task, but comedians have to put a lot of time and effort into their assignments. It's about being both silly and funny at the same time. Good comedians succeed in making people laugh without using pranks or special gimmicks. The stand up comic is probably the most common form of performance. Stand up comedians usually perform at comedy clubs. They often travel and work in a variety of settings. The length of the performance depends on whether the comedian is the opening act or in between a function towards the middle of the programme. The duration of a main act is approximately 30 minutes. Comedians are similar to storytellers – they make their audience care about the character which they are portraying. Many comedians will tell a story about their lives, evoking not only a laugh but empathy as well.			
Related Occupations – which occupations are more or less the same?			
- Comedy writer - Actor - Radio presenter

Community Development Officer			
General Information			
Description – what is this occupation?			
Restructuring in social services resulted in an increased role for community development officers.			
Typical Job Activities – what will I do in this occupation?			
Community workers work with individuals, families, groups and organisations to help and support community development. They assist communities in the identification of their needs, encourage them to participate in decision-making processes and develop appropriate services and facilities to meet the identified needs. Community development officers may work independently or as part of an organisation. In the course of their work they usually interact with a variety of people including other community workers, clients and their families, counsellors, youth workers and social workers. They may also work alongside health professionals, staff of government agencies and members of the public. Community development officers may perform the following tasks: - assist community groups in planning, developing and maintaining community resources and programmes - help community groups obtain information and government resources - help to develop training opportunities and support networks - communicate with community groups, welfare agencies, government bodies, non-governmental organisations and private businesses about community services such as housing, health, welfare and recreation - develop and evaluate strategies that will encourage community participation in activities - recommend changes to community development programmes policies or practices - help design training and orientation programmes for volunteers - recruit, interview, select and train volunteers - help raise community and public awareness on issues such as welfare rights by organising and/or helping to coordinate meetings and seminars - write letters, articles, submissions and reports as part of the support process - may act as advocates for members of the community. The work of community workers involves considerable personal contact and travel within communities.

Compositor/Phototypesetter			
General Information			
Description – what is this occupation?			
A compositor/phototypesetter operates and tends machines that provide typeset matter			
Typical Job Activities – what will I do in this occupation?			
This is used to prepare printing plates for the pressroom worker who prints newspapers, magazines and various other publications. The compositor reads from copy clipped to the typesetting machine and operates a keyboard. There are two kinds of compositors: - The linotype compositor assembles letters into lines of words (slugs). - The monotype compositor feeds perforated tape into a machine that reads and selects metal moulds for each letter. The phototypesetter types the text and produces a magnetic or perforated tape. This tape is then fed into a computer that hyphenates, creates columns and makes a second tape, which is photographed.			
Related Occupations – which occupations are more or less the same?			
- Bookbinder - Computer terminal system operator - Die-maker - Electronic originator - Framer - Gravure machine minder - Lithographic machine minder - Machine minder - Millwright - Motor fitter - Photolithographer / electronic originator - Printer's Mechanic - Roll turner - Telegraph operator			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 10 Certificate for an apprenticeship at a company. Senior Certificate for full-time training at the South African Printing College. COMPULSORY SUBJECTS: English, Mathematics RECOMMENDED SUBJECTS: None			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a compositor/phototypesetter you need to register with an employer providing suitable training. ADDITIONAL REQUIREMENTS: If you want to become a compositor/phototypesetter you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A compositor/phototypesetter should: - have manual dexterity; - have good eye-hand co-ordination; - have good eyesight; - be healthy

Computer Games Programmer			
General Information			
Description – what is this occupation?			
A computer games programmer translates a computer game idea into the code of programming language			
Typical Job Activities – what will I do in this occupation?			
Although it is similar in function to desktop programming, the computer games programmer can be more creative because there is often no standard solution to a problem. You will design, test and improve programs for computer games, and debug program codes. A computer games programmer works closely with game designers, play testers, sound and graphics specialists, in the development of a program. You will usually work in a team of programmers who are each given a specific number of tasks to translate. Some programmers may test and 'de-bug' the completed application though in larger companies, this will often be done by a specialist games tester.			
Related Occupations – which occupations are more or less the same?			
- Computer consultant - Computer engineering - Computer programmer - Computer technician - Systems analyst - Website designer - -			
Educational Requirements - which qualifications do I need to enter this occupation?

Computer Programmer			
General Information			
Description – what is this occupation?			
The computer programmer serves as a link between man and the computer			
Typical Job Activities – what will I do in this occupation?			
You will write programs, which are detailed instructions that list the steps that the computer must take to solve a problem or handle information in a logical order. The specifications of a particular task are provided by the systems analyst. The programmer writes the program and translates it into a computer language such as VISUAL BASIC, DELPHI, C and C++. The sequence of instructions is entered on keyboard terminals that are connected to the computer. The computer operator checks the operation of the program and makes sure that the instructions are correct and that they will produce the desired information. If errors occur, the program must be changed and rechecked until the desired results are produced. It is useful to understand programming before going into other areas of the computer industry.			
Related Occupations – which occupations are more or less the same?			
- Computer consultant - Computer engineering - Computer programmer - Computer technician - Network controller - Systems analyst - Website designer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma course and in-service training. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Computer Science			
Entry to Work Place			
IN-SERVICE TRAINING: Most large computer firms have their own training departments where intensive courses are offered and trainees have the opportunity to work on the firm's own computers. A number of private firms also offer training courses. NOTE: Before deciding on a career in computer programming a candidate is advised to take an aptitude test.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A computer programmer should: - enjoy mathematics and solving problems; - be able to concentrate for long periods; - be imaginative; - be patient and accurate; - think logically; - make his own decisions; - divide tasks into steps of logical sequence; - persevere with a task until all the problems are solved.

Computers: Multimedia Specialist

General Information

Description – what is this occupation?

Multimedia specialists use computer programming skills to combine text, data, graphic images, animations, sound and video into consolidated multimedia programmes.

Typical Job Activities – what will I do in this occupation?

Multimedia refers to the wide range of different media used to create visual and interactive products. It is also referred to as "New Media" using new computer technology and software to produce products for digital publication on the internet, CD Rom publications, DVD's and other media using digital technology as vehicle. Multimedia applications also include computer-based interactive training, data presentation and information kiosks, CD-ROMs, entertainment and educational products and multimedia presentations.

Multimedia specialists:

- talk to clients to establish what is required
- prepare design concepts
- talk to graphics, production and engineering experts
- prepare flow diagrams and storyboards to outline the product concept
- design animation software for interactive CD's, DVD's, video game cartridges and internet-based applications
- design special effects software for film and video applications
- write, modify, integrate and test software code for e-commerce and other internet applications
- research and evaluate new interactive media software products.

Specialisation is common in the industry, although multimedia specialists often perform a combination of the following roles (Australian Government Jobguide 2003):

The author-based programmer applies appropriate multimedia authoring technologies to conceptualise, design, assemble and integrate a variety of images, text, animation and/or sound before selecting and applying the desired program structure to produce a multimedia end-product. This may involve writing scripts, using namespaces and packages and writing extensions. The term 'authoring a multimedia sequence' is sometimes used to describe these processes.

The computer animator designs, draws, lays out and produces animation sequences incorporated in multimedia products. Traditionally, animators have worked in film and television, but multimedia provides a new and challenging extension for creative animators. Animators may be involved in activities such as the production of storyboards and stop-motion animation (flat plane, modelling) as well as drawing cartoons and other characters in a succession of related movements to create an illusion of movement. Some further specialisation is possible, for example as a 3D graphic animator.

A computer-based graphic designer uses computing technology and specialist software packages to manage the production, interface and integration of various graphics and other media into the multimedia package design. This includes the design of art and copy layouts for CD-ROM and multimedia products. It is possible to further specialise and focus on specific industry sectors such as advertising, corporate design, Internet applications or exhibition design.

A digital video-sound editor is involved in the computer-based editing of video-sound for multimedia products. Working under instruction from a director, the editor makes editorial decisions with regard to the mood, pace and climax of sound effects. This involves working closely with other professional staff to analyse, evaluate and select sound effects for integration with images and other mediums.

An instructional designer designs and develops content and curriculum products, learning support resources and delivery/assessment methodologies. The instructional designer increasingly uses the flexibility offered by multimedia applications to target specific learning objectives and audiences.

Related Occupations – which occupations are more or less the same?			
- Artist - Animator - Graphic designer - Industrial designer - Video editor - Website designer - Illustrator - Lecturer/Teacher - Desktop publisher			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matriculation exemption for a degree course. Senior Certificate for Diploma and BTech Degree. COMPULSORY SUBJECTS: Mathematics HG, Computer Science HG for a degree. (Alternatives are available for applicants who did not have Computer Science at school, but who comply with the other Requirements. Contact the relevant institution.)			
Entry to Work Place			
The rapid expansion of in this sector has meant that skills are as important as qualifications. Training is on-going, both on the job and through short courses. To keep up to date with new developments, multimedia specialists usually share information via e-mail and web-based resources, attend technical training courses and conferences and read computer-related journals, magazines and newsletters.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
Multimedia specialists need the following: - the ability to think logically and abstractly; - the ability to pay close attention to details; - a broad knowledge of multimedia to communicate effectively with sound engineers, producers, etc. - the ability to work alone or as part of a team; - the ability to visualise and conceptualise; - creative imaginative mind with artistic flair; - a high-level project management capacity and ability to work to deadlines; - an aptitude for drawing; - an active interest in keeping up with technological advances.			
Employment Indicators – what are the important employment facts regarding this occupation

Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Work performance	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business

Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities		The growth of private companies (big and small)		
Technology		Direct consumer demands – “man in the street”		My own performance and skills		
Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Computers: Network Controller			
General Information			
Description – what is this occupation?			
Modern society is becoming increasingly dependent on computers. This ensures a great demand for skilled manpower in the computer field.			
Typical Job Activities – what will I do in this occupation?			
The network controller: - is responsible for the equipment used to link the computer network through the telephone system - designs and installs equipment - maintains the system - detects and corrects faults in the system. The traditional services offered by the Internet are well-known to most, but the explosive growth of its use has sparked further demand for access to new and enhanced services provided by an Information Superhighway (of which the Internet is only a part). These would include services in the following areas: - Business: Telecommuting and electronic commerce - Consumer: Interactive television, video telephones, video-on-demand, information on demand and other on-line services such as electronic home shopping - Academic/Scientific: Telemedicine, telerobotics and distance learning.			
Related Occupations – which occupations are more or less the same?			
- Computer consultant - Computer engineering - Computer operator - Computer programmer - Computer technician - Systems analyst			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma course. COMPULSORY SUBJECTS: Mathematics, RECOMMENDED SUBJECTS: Computer Studies			
Entry to Work Place			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A network controller and designer should:

- have good communication skills;
- be able to think clearly and logically;
- have good intellectual abilities;
- have initiative;
- be creative;
- be well disciplined;
- work accurately;
- have an aptitude for mathematics;
- have good judgement and decision-making abilities;
- have patience and perseverance.

Computers: Software Developer			
General Information			
Description – what is this occupation?			
The computer software developer works at all stages in the development of a software (computer program) product.			
Typical Job Activities – what will I do in this occupation?			
Together with others in the development team, you will analyse the existing system and prepare the specification of a new one. You will test, install and retest programs and deal with any bugs (problems). The computer software developer writes instructions or a user manual and may train staff on how to use the program or system. You will also train those who need to support and maintain any new development such as support services technicians. You will continue to support the new system once it is in place.			
Related Occupations – which occupations are more or less the same?			
- Computer consultant - Computer engineering - Computer programmer - Computer technician - Systems analyst - Website designer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma course. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Computer Science			
Entry to Work Place			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A computer software developer should: - be analytical; - be able to work in abstract terms; - be precise; - have technical knowledge; - be able to work both on his own and in a team.

Computers: Systems Analyst			
General Information			
Description – what is this occupation?			
A systems analyst studies the problems and needs of computer users and writes the specifications for a computer system. You will develop methods of using computers to solve problems.			
Typical Job Activities – what will I do in this occupation?			
The systems analyst determines whether an undertaking can profit from the use of a computer. You will analyse the organisation's requirements in order to design a system. You will write a comprehensive programme and system specification and consult the users of the system to ensure increased productivity. The systems analyst: - discusses the needs or problems with management or with specialists to determine the exact nature of the problem - collects, organises and evaluates all relevant information for fulfilling these needs - defines the computer process needed to turn the raw data into useful information - decides how the data will be stored and how to apply the results of computer processing - checks the whole operation and corrects errors - ensures that the system functions properly. In small organisations the systems analyst may also perform programming duties.			
Related Occupations – which occupations are more or less the same?			
- Business analyst - Computer consultant - Computer engineering - Computer operator - Computer operations and project manager - Computer programmer - Computer technician - Network controller and designer			
Educational Requirements - which qualifications do I need to enter this occupation?

Government policy and legislation		Government strategy and activities		The growth of private companies (big and small)		
Technology		Direct consumer demands – “man in the street”		My own performance and skills		
Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Concrete Technologist			
General Information			
Description – what is this occupation?			
A concrete technologist applies his knowledge of the properties of concrete to ensure that concrete is produced to a high standard of quality. You will be involved in the practical and technical aspects of concrete construction.			
Typical Job Activities – what will I do in this occupation?			
The concrete technologist spends time in the laboratory conducting tests to determine the properties and performance of building materials such as cement, stone, sand, extenders and chemical mixtures. Information obtained is use for mix design purposes and the compiling of specifications. The concrete technologist also spends time on the construction site ensuring that concrete is being produced to the correct specifications. The concrete technologist is involved in research projects and special investigations relating to building and construction materials and techniques. This is a responsible position since poor-quality concrete can negatively affect the strength of a building.			
Related Occupations – which occupations are more or less the same?			
- Building supervisor - Building surveyor - Coal technologist - Construction manager - Geotechnician - Plasterer - Plastics technologist - Rubber technologist - Wall and floor tiler			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate for diploma courses. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Physical Science			

Entry to Work Place			
CEMENT AND CONCRETE INSTITUTE: Diploma in Advanced Concrete Technology: - Level 1: Introduction to Concrete. - Level 2: Concrete Practice. - Level 3: Concrete Technology. - Level 4: Concrete Technology and Construction. - Level 5: Advanced Concrete Technology. The Institute has centres in Johannesburg, Cape Town, Durban, Port Elizabeth. REGISTRATION: A person who has obtained the recognised qualifications is eligible for "In Training" registration: - Recognised Government Certificate of Competency: Certificated Engineer in Training or - NDip (50% pass rate): Engineering Technician in Training or - BTech or MTech degree: Engineering Technologist in Training. After gaining between 2 to 4 years of appropriate practical experience a civil engineering technician or technologist may register under the auspices of the Engineering Council of South Africa as: - Registered Certificated Engineer or - Registered Engineering Technician or - Professional Technologist (Engineering).			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A concrete technologist should: - have an aptitude for mathematics and science; - have a methodical, but practical approach to problem-solving; - be responsible; - keep up with the latest developments in technology.			
Employment Indicators – what are the important employment facts regarding this occupation

Construction Electrician			
General Information			
Description – what is this occupation?			
A construction electrician is responsible for the installation, testing and maintenance of wiring, accessories, control equipment, wireways and switchboards.			
Typical Job Activities – what will I do in this occupation?			
The construction electrician is involved in: - preplanning of installations in domestic, industrial and commercial premises - installing wireways and switchboards according to specifications and regulations - installing wiring and metering equipment without clashing with other services - calculating electrical load requirements - selecting cables and conductors - determining protective devices. The construction electrician bends, fits and fastens conduits (pipe or tubing) inside partitions, walls or other concealed areas. Insulated cables or wires are pulled through conduits. Wiring is connected to circuit breakers, transformers or other components. When an installation is complete, the system is tested to be sure it works properly. The construction electrician must know and follow national electrical codes and municipal requirements and specifications.			
Related Occupations – which occupations are more or less the same?			
- Aircraft electrician - Automotive electrician - Electrical and electronic fitter - Electrical engineering technician - Electrician - Electro-mechanician - Linesman and substation erector			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 10 Certificate. Some employers prefer higher qualifications. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Trade Theory, Technika: Electrical			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a construction electrician you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical(FET) college or a correspondence course at Technisa. - Practical training: In-service training under supervision of a qualified tradesman. - Duration of course: 3 to 4 years depending on the experience of the candidate and his qualifications prior to the apprenticeship. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become a construction electrician you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A construction electrician should: - be responsible, alert and cautious; - enjoy working with his hands; - be inventive, self-reliant and accurate; - be able to work under pressure; - communicate efficiently with fellow workers; - have good health and stamina; - have good eyesight and colour vision; - have manual dexterity and mechanical aptitude.

Coppersmith			
General Information			
Description – what is this occupation?			
A coppersmith works mainly with non-ferrous metal such as copper and brass, manufacturing cylinders, pipes, cisterns and art objects.			
Typical Job Activities – what will I do in this occupation?			
Blueprints of the intended structure are studied and the copper plates marked off accordingly. Copper plates are bent to prescribed angles, holes are drilled and edges smoothed. The copper plates are cut either mechanically or with a gas cutter. The copper plates are then straightened, bent, rolled or dished to the required forms. The shaping is done with heavy machines working on the cold copper plates. Hot processing is sometimes required when difficult angles have to be shaped. Holes for rivets and stays are drilled into marked-off positions. Overlapping sides are compressed together.			
Related Occupations – which occupations are more or less the same?

Cost and Management Accountant			
General Information			
Description – what is this occupation?			
The function of a cost and management accountant is to prepare and present accounting information, to assist management in the formulation of policies and the planning and control of the operations of a manufacturing industry.			
Typical Job Activities – what will I do in this occupation?			
You will be concerned with the economic viability and future planning of a company, with the emphasis on the manufacturing operations. The cost and management accountant applies accounting and costing principles, methods and techniques, as well as economic principles to determine costs and analyse savings/excesses compared with previous experience or with budgets. Management will require an update of this information at regular pre-determined intervals. Compiling the information also entails examining factors such as the under-utilisation of a plant, low productivity and the cost of holding excessive materials or stocks. The other aspect of cost and management accounting is to provide the management with analyses and figures that will enable them to make forecasts regarding the profitability of new products, developments and expansions.			
Related Occupations – which occupations are more or less the same?			
- Assessor - Auditor - Bank official - Bookkeeper - Budget officer - Chartered accountant - Financial consultant - Loan officer - Marketing manager - Valuer/appraiser			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma course. COMPULSORY SUBJECTS: Mathematics. RECOMMENDED SUBJECTS: Accounting, Economics, Business Economics			
Entry to Work Place			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A cost and management accountant should: - have a strong aptitude for mathematics; - be able to work quickly and efficiently; - be able to communicate financial information effectively.

Costume Designer			
General Information			
Description – what is this occupation?			
The task of a costume designer is to design the costumes for live performances and television and film productions.			
Typical Job Activities – what will I do in this occupation?			
It is the costume designer's responsibility to ensure that the period of the performance is accurately reflected in the costumes, right down to the last accessory, including hats, shoes, gloves and hairstyles. A costume designer works creatively within certain restrictions. Some period costumes need to look heavy, yet should be designed in such a way to allow the actors to move freely. This is especially important when action such as dancing or fencing forms part of the performance. The designer needs to be knowledgeable about fabrics so as to create a feel for a period being portrayed. The costume designer working for a small company also does the cutting and machining. In a large company this is done by specialists, but the designer supervises the process and takes responsibility for the final product.			
Related Occupations – which occupations are more or less the same?			
- Fashion buyer - Fashion journalist - Fashion marketer - Graphic designer - Pattern-maker - Sewing-machine operator - Tailor - Textile designer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Art, History, Home Economics			
Entry to Work Place			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A costume designer should: - have creative imagination as well as the ability to be creative within certain constraints, including budgetary constraints; - have an excellent eye for detail and the ability to transform ideas into practical concepts; - be able to supervise and delegate; - be able to work under pressure.

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Crane Operator			
General Information			
Description – what is this occupation?			
The crane operator controls a crane to transfer heavy objects from one level to a higher level, a lower level or the same level.			
Typical Job Activities – what will I do in this occupation?			
The crane operator ensures that the cable does not jerk and manoeuvres the crane in such a way that the load comes to a standstill in the required place. In cases where the crane is mobile on tracks, the crane operator regulates the backward and forward movements. This whole process involves a complexity of moves and actions. A crane operator operating an outdoor crane may be assisted by ground personnel by means of telephone or hand signals. The working conditions vary from place to place. The overhead crane operator is often exposed to the heat, smoke and gases of factories. Weather conditions have an influence on the outside worker. Modern cranes, however, have comfortable cabins. Overtime work may sometimes be required.			
Related Occupations – which occupations are more or less the same?			
- Air drill operator: construction - Bridge or gantry crane operator - Cable car operator: building materials - Crane driver - Excavating machine operator: construction - Floating crane operator - Machinist - Truck driver			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 10 Certificate. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: None			

Entry to Work Place			
IN-SERVICE TRAINING: The law requires that the crane operator should be formally trained. Most of the larger organisations offer in-service training consisting of a theoretical and practical part. - Theoretical training: The prospective crane operator first has to undergo an introductory period in order to become familiar with the organisation and its activities. - Practical training: Practical in-service training is given by a training specialist, foreman or experienced crane operator. During the initial stage the crane operator will be under the supervision of a co-driver. ADDITIONAL REQUIREMENTS: A prospective crane operator should: - be at least 18 years of age; - undergo a selection test before appointment.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A crane operator should: - be responsible and reliable; - be alert; - be unaffected by the height at which he works; - be patient and have perseverance; - have good eyesight; - have good eye-hand co-ordination as well as good co-ordination between right and left; - have manual dexterity; - be able to judge distances and heights accurately.

Credit Controller			
General Information			
Description – what is this occupation?			
The credit controller is responsible for opening new accounts and monitoring the monthly payment thereof			
Typical Job Activities – what will I do in this occupation?			
New accounts are opened according to a company's credit policy. The credit controller reviews an applicant's credit history by contacting credit bureaus, banks and other companies or institutions where the applicant already has credit. You will further assess an applicant's creditworthiness by means of a personal interview and possibly contacting the applicant's employer. You will also need to process all the necessary documentation and collect deposits, where required. The credit controller monitors the monthly payment of accounts. Customers who are defaulting on their payments are contacted and persuaded to bring their account up to date. Defaulters who do not respond to persuasion need to be handled more firmly, but the credit controller should always be polite and discreet. It may be necessary to refer the account to a collection agency or attorney for legal action.			
Related Occupations – which occupations are more or less the same?			
- Adjuster - Claim examiner - Collection clerk - Credit manager			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate. COMPULSORY SUBJECTS: Accountancy RECOMMENDED SUBJECTS: Mathematics			
Entry to Work Place			
IN-SERVICE TRAINING: A new credit controller is usually supervised by an experienced staff member who is responsible for training the new recruit in respect of the company's credit policy, computer equipment used for processing and accessing information and the correct procedure for dealing with credit bureaus and banks. Occasionally training programmes incorporating lectures on the theoretical aspects of credit control are implemented. A conscientious credit controller who is prepared to study further can move into credit management. Appropriate qualifications are a BCom degree or a diploma in credit management from a technikon or private college.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A credit controller should: - have the ability to maintain good relationships with customers; - have perceptiveness in assessing human nature; - be assertive but sensitive and discreet; - have good speaking and writing skills; - have the ability to assimilate detailed information and draw conclusions.

Credit Manager			
General Information			
Description – what is this occupation?			
Consumers and businesses use credit to buy houses, cars, large domestic appliances, raw materials used in manufacturing and merchandise to be sold in stores.			
Typical Job Activities – what will I do in this occupation?			
The credit manager (credit authoriser) has the final authority in accepting or rejecting credit applications. When evaluating a credit application the credit manager analyses detailed financial reports, interviews the representatives of the various companies, and reviews credit agency reports to determine the records of such firms in repaying debts. Some credit managers in banking institutions, for example, determine whether the personal details such as the income and address of a credit card applicant are correct before the credit card is approved. The credit manager therefore contacts a wide range of information sources to verify an applicant's personal, financial and other relevant details. If clients fail to pay it is the responsibility of the credit manager to refer these cases to an attorney.			
Related Occupations – which occupations are more or less the same?			
- Banker - Credit controller - Financial manager - Income tax consultant - Insurance underwriter - Investment manager - Purchase manager			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training

Customs and Excise Officer			
General Information			
Description – what is this occupation?			
A customs and excise officer has to inspect people and ships, aeroplanes and motor vehicles entering and leaving the country to ensure that the correct duties are being paid, illegal goods such as drugs, fauna and flora are not being smuggled and that the necessary documentation is in order.			
Typical Job Activities – what will I do in this occupation?			
Customs and excise can be divided into three groups: - Customs affairs: The officer in this section has to control all imports and exports. You will have to ensure that the correct import duties are paid and you have to inspect the identification books and documents of importers and exporters to ensure that legislation is complied with. You will examine goods to determine the composition thereof. Control is necessary to ensure that fauna and flora are not imported or exported illegally. You also have to control goods stored in warehouses. - Excise affairs: The officer concerned with excise affairs must make sure that excise duties are levied from firms licensed to manufacture taxable goods such as cigarettes, alcoholic drinks and petrol. You will also board ships and aircraft entering the country and carry out inspections on the premises of large manufacturers of goods for export to ensure that the correct excise duties are being paid. - Passenger and external services: This officer searches baggage, questions passengers and crew members, conducts body searches and may arrest people found guilty of contravening the law. You will be stationed at places of arrival into the country such as frontier-posts and airports.			
Related Occupations – which occupations are more or less the same?			
- Civil investigator - Fireman - Foreign affairs assistant - Police officer - Security official

Dancer			
General Information			
Description – what is this occupation?			
This term covers a range of different styles of dancing, including classical ballet, modern, acrobatic, aerobic, mime, night-club and ball-room.			
Typical Job Activities – what will I do in this occupation?			
Many young girls dream of becoming ballet dancers. Their dreams, however, rarely encompass the reality of the self-discipline required and the rigorous and arduous ballet lessons and rehearsals every day, including weekends and holidays. Being a ballerina is a strenuous career and its demand for physical perfection entails a constant battle with diet, weight, fitness and health. The rigorous and early training required, the short duration of a career and the strong competition for jobs make ballet a career for the very dedicated. Ballet training for girls usually begins at five to eight years of age and for boys between ten and fifteen. Training in modern dance does not have to begin as early as this. The physical demands of professional dancing force most dancers to stop performing by their late thirties, but many continue to work in the field as choreographers, dance teachers or artistic directors.			
Related Occupations – which occupations are more or less the same?			
- Choreographer - Dance critic - Dance director - Dance instructor - Dance notator - Dance therapist - Ice skater			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate for a diploma course in ballet or dance. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Dance			
Entry to Work Place			
ADDITIONAL REQUIREMENTS: No specific level of schooling is required to audition for the performing arts councils, but dancers will probably be expected to have passed the advanced examinations of the royal Academy of Dancing or the Cecchetti methods of training.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A professional dancer should: - be dedicated to dance; - have perseverance; - have physical stamina and good feet; - be flexible, agile and graceful; - have a sense of rhythm; - have a feeling for music and creative ability; - be able to work as part of a dance team.				
Employment Indicators – what are the important employment facts regarding this occupation

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Dental Technician			
General Information			
Description – what is this occupation?			
The dental technician makes and repairs dentures, bridges, crowns, fillings and orthodontic apparatus. You will follow the instructions or prescription of a dentist and will not deal with patients yourself.			
Typical Job Activities – what will I do in this occupation?			
When a denture has to be made, the dentist obtains impressions of the patient's gums and palate, from which the technician makes a model. After this has been fitted for comfort, the final denture is cast in an acrylic material or artificial resin. The dental technician makes crowns, bridges and fillings, and works with braces or correction appliances. The product that is made usually affects the appearance of the patient, which means that the work needs to be very precise and neat. The dental technician may perform all types of laboratory work or may specialise in: - Prosthetics. - Crown and bridge work. - Metal framework. - Orthodontics.			
Related Occupations – which occupations are more or less the same?			
- Dental assistant - Dental instrument maker - Instrument repairer - Jeweller - Medical laboratory technician - Watch repairer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology			
Entry to Work Place			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A dental technician should: - be able to follow directions carefully; - be patient; - enjoy doing detailed, accurate work; - have some artistic ability; - have manual dexterity; - have good colour vision; - be tidy and neat

Desktop Publisher			
General Information			
Description – what is this occupation?			
Desktop publishing is a rapidly changing field that encompasses a number of different kinds of jobs.			
Typical Job Activities – what will I do in this occupation?			
Personal computers enable desktop publishers to perform publishing tasks that would otherwise require complicated equipment and human effort. Advances in computer software and printing technology continue to change and enhance desktop publishing work. Desktop publishers produce items such as books, business cards, calendars, magazines, newsletters and newspapers, packaging, slides, and tickets. As companies have brought the production of marketing, promotional, and other kinds of materials in-house, they increasingly have employed people who can produce such materials. Desktop publishers use a keyboard to enter and select formatting specifics such as size and style of type, column width, and spacing, and store them on the computer. The computer then displays and arranges columns of type on a video display terminal or computer monitor. An entire newspaper, catalogue, or book page, complete with artwork and graphics, can be created on the screen exactly as it will appear in print. Operators transmit the pages for production into film and then onto printing plates, or directly onto printing plates. By using computer software the desktop publisher: - formats and combines text, numerical data, photographs, charts, and other visual graphic elements to produce publication-ready material - may write and edit text - creates graphics to accompany text - converts photographs and drawings into digital images and then manipulates those images - designs page layouts - creates proposals - develops presentations and advertising campaigns - typesets and does colour separations - merges photographs with computer images, scans and adjusts colours for the publication - translates electronic information onto film or other traditional forms - can create special effects or other visual images using film, video, computers, or other electronic media - talks to clients to obtain a clear understanding of their requirements. Clients' requirements may include the preparation of booklets, brochures, advertisements, in-house magazines/newsletters, training and technical manuals, stationery, and books ready for printing or publishing - prepares specifications and estimates cost of materials and time required to complete the work - prepares quotations for work contracts. Desktop publishers may specialise in simple office documents or in graphically complex, multi-coloured publications. Desktop publishers may have to work long hours when a particular deadline must be met (e.g. when working on a major advertising campaign or the launch of a new business venture).			
Related Occupations – which occupations are more or less the same?

Technology		Direct consumer demands – “man in the street”		My own performance and skills		

Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Detective			
General Information			
Description – what is this occupation?			
The detective specialises in criminal investigation.			
Typical Job Activities – what will I do in this occupation?			
You may work on narcotics, illicit gold and diamond dealings, fraud, murder, robbery and car theft. A member of the police service with at least two years of service who has a talent for objective investigation may, after selection, enter the detective course. Once you have successfully completed the course, you may become a detective. A detective: - visits the scenes of crimes and tries to reconstruct those crimes as completely as possible - takes statements from victims and witnesses - obtains descriptions of perpetrators if possible - gathers and checks out evidence and clues - makes arrests - files detailed reports - testifies at trials. Although most detectives work for the SAPS, private detectives (who may or may not have any formal training) may work for various organisations and agencies or may be self-employed.			
Related Occupations – which occupations are more or less the same?			
- Correctional services officer - Police officer - Prison warden - Security guard - Traffic officer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate. Graduates receives preference. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: None			

Entry to Work Place			
Practical and theoretical training at the South African Police Service. ADDITIONAL REQUIREMENTS: The prospective detective must: - have a service period of at least two years in the SAPS; - undergo a selection test. NOTE: The detective must meet the physical and intellectual standards set by the Department of Police in the area where he works. Since the requirements in the different branches may differ, you should check with the Department of Police for full details.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A detective should: - have an eye for detail; - think logically; - be honest and have integrity; - inspire confidence; - make objective judgements; - be very responsible; - be physically fit; - not mind working long and irregular hours under dangerous circumstances.

Diamond Industry Worker			
General Information			
Description – what is this occupation?			
Diamond cutting involves a number of stages and each stage requires a specialised tradesman to do the job:			
Typical Job Activities – what will I do in this occupation?			
- Sorter: Diamonds are first sorted by a diamond sorter into various shapes, sizes, colours and qualities. - Marker/designer: The diamond marker decides how the final product will look and marks the diamond. - Diamond sawyer: The sawyer saws the diamond using a copper disc spread with diamond powder and oil. - Diamond cutter: The function of the cutter is to create perfectly round diamonds with the optimum diameter. An industrial diamond is used to cut the diamond. - Crossworker: The function of the crossworker is to lay the foundation of the diamond and to follow instructions to obtain the optimum value for the finished product. The work is done on a polishing disc covered with diamond powder. The diamond is held in a clamp and 18 facets are polished one by one. - Brillianteer: A diamond brillianteer divides each of the top and lower facets and then polishes the triangular facets in order to create a round brilliant cut diamond with 58 facets.			
Related Occupations – which occupations are more or less the same?			
- Jeweller - Gemmologist - Goldsmith - Instrument maker			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate. Grade 10 Certificate (Polisher and Cutter). COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: None			
Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a diamond industry worker you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical(FET) college or a correspondence course at Technisa. - Practical training: In-service training under supervision of a qualified tradesman. - Duration of course: 3 years depending on the experience of the candidate and his qualifications prior to the apprenticeship. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			

What level of natural skill and/or aptitude do I need for this occupation?				
Exceptionally High	High	Moderate	Low	
A diamond industry worker should: - be patient and careful; - be accurate and precise; - concentrate on detail for long periods; - be reliable and honest; - have good spatial perception; - enjoy working with his hands; - have excellent eyesight; - have hand and finger dexterity; - have good eye-hand co-ordination; - have mechanical skills.

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Diesel Mechanic			
General Information			
Description – what is this occupation?			
The duties of the diesel mechanic include: - diagnosing engine trouble - dismantling an engine when necessary - replacing or repairing defective parts - reassembling the engine - repairing mechanical and electrical faults in construction machinery.			
Typical Job Activities – what will I do in this occupation?			
The experience of the diesel mechanic often helps him to locate a problem by listening to the noise in the engine, although electronic diagnosing equipment is normally used. Sometimes a complete part has to be replaced while at other times only a minor adjustment is sufficient. If it proves impossible to repair an engine on location it is taken to the workshop where the mechanic has the use of modern tools and equipment. The diesel mechanic also completes job cards, furnishes information on the parts that should be ordered and assists in training apprentices. If the mechanic is self-employed, he performs administrative and managerial tasks as well. The working conditions of the diesel mechanic vary according to the place of employment. You may work in a well-equipped workshop or on a farm, ship or construction site.			
Related Occupations – which occupations are more or less the same?			
- Apprentice machine minder: rotary machine - Automotive electrician - Automotive machinist - Diesel fitter - Motor mechanic			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 10 Certificate. Some employers demand higher qualifications. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics, Trade Theory, Technical Drawing, Technika: Mechanical			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a diesel mechanic you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical(FET) college or a correspondence course at Technisa. - Practical training: In-service training under supervision of a qualified tradesman. - Duration of course: 4 years but it can be completed in a shorter period provided that the candidate has higher educational qualifications. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become a diesel mechanic you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A diesel mechanic should: - enjoy working with his hands; - have mechanical aptitude and ability; - be able to communicate with people; - be practical and responsible; - have good eyesight and hearing; - have good eye-hand co-ordination; - have manual dexterity; - possess average physical strength and good health and stamina.

Display Artist			
General Information			
Description – what is this occupation?			
A merchandise displayer designs and installs shop and shop window displays in an attractive and eye-catching manner.			
Typical Job Activities – what will I do in this occupation?			
A theme is chosen and then the necessary items (such as lights, plastic mannequins and background scenes) are obtained or constructed and installed. In addition, previous displays are dismantled.			
In small shops, one displayer may perform all the tasks, while in larger shops they may specialise in activities such as carpentry, painting, sign-writing, interior or exterior displays or administration.			
The display artist should construct window displays or dress counters in such a way that products catch the eye of the potential buyer. The work of the display artist thus forms an important part of merchandise marketing.			
Related Occupations – which occupations are more or less the same?			
- Advertising worker - Art teacher - Clothes designer - Clothing manager - Colour consultant - Décor designer - Exhibition designer - Interior designer (decorator) - Illustrator (commercial artist) - -			
Educational Requirements - which qualifications do I need to enter this occupation?

Domestic Appliance Mechanician			
General Information			
Description – what is this occupation?			
The domestic appliance mechanic performs maintenance, locates faults and repairs a wide variety of appliances e.g. kettles, toasters, vacuum cleaners, freezers, stoves, microwave ovens.			
Typical Job Activities – what will I do in this occupation?			
The domestic appliance mechanic locates faults with the aid of various diagnostic techniques, test equipment and specialised tools. Readings from these instruments are interpreted and evaluated to assist in determining the problem. Sometimes components or attachments have to be manufactured. For this purpose sketches and diagrams of electrical circuits and mechanical components are used. After repairing the appliance, the mechanic tests it to see if it is in proper working order. You will listen for excessive vibrations and make sure that the appliance does not overheat. In the case of automatic machines with programmes you will let the machine run through a programme to make sure it is in good working order. You will adhere to basic safety measures in order to ensure safe working and a high standard of service from the appliance. The domestic appliance mechanic fills out a card recording the number of hours spent on a specific job. This is used to bill the client.			
Related Occupations – which occupations are more or less the same?			
- Electrician - Electro-mechanician (millwright) - Instrument mechanician - Radio and TV mechanic - Refrigeration mechanic - Office machine mechanic			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate. Some employers prefer higher qualifications. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics, Physical Science, Technika: Electrical, Trade Theory.			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a domestic appliance mechanic you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical(FET) college or a correspondence course at Technisa. Obtain at least the N2 Certificate. - Practical training: In-service training under supervision of a qualified tradesman. - Duration of course: 2 to 4 years depending on the experience of the candidate. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become a domestic appliance mechanic you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. Domestic Worker			
General Information			
Description – what is this occupation?			
The main responsibilities of a domestic worker are usually to clean and tidy the employer's home and wash and iron the laundry			
Typical Job Activities – what will I do in this occupation?			
The specific tasks involved, the materials used and the household equipment provided will vary from one employer to another. Each employer will give instructions about specific requirements. Domestic work can be done: - full-time in return for a salary - full-time in return for a salary and accommodation - part-time. The part-time worker usually works in a number of different homes during the course of a week. A full-time worker is often expected to prepare meals or at least assist with the preparation. Depending on the individual's skills and talents, a domestic worker may be called upon to carry out any of the following specialised duties: - caring for young children - collecting children from school or nursery school - baby-sitting - feeding and caring for pets - light garden duties - light sewing or mending - arranging flowers - preparing the dinner table and food for dinner or cocktail parties - helping and washing up at functions or dinner parties - house-sitting for employers on holiday - taking accurate telephone messages. These tasks should be agreed upon by the employer and the domestic worker at the commencement of employment. In some cases certain tasks, particularly those that occur outside normal working hours or on an ad-hoc basis, will be paid for at an extra rate.

Draughtsman			
General Information			
Description – what is this occupation?			
The draughtsman prepares detailed drawings based on sketches and specifications made by architects, engineers or other designers.			
Typical Job Activities – what will I do in this occupation?			
Construction projects differ radically and specialisation in preparing drawings in the various fields is therefore necessary: - The architectural draughtsman draws plans for all kinds of buildings. - A civil engineering draughtsman draws plans for bridges, roads, irrigation and construction schemes. - A mechanical engineering draughtsman sketches plans for machines and engine parts. - A structural engineering draughtsman draws designs for towers and steel frames. - The town and regional planning draughtsman draws maps and builds models for projects. - The mining draughtsman draws plans of the mines which can help with the upgrading of safety standards. The industry distinguishes between a tracer, a detail and a design draughtsman: - The tracer prepares final drawings and assists the draughtsman. - A design draughtsman handles advanced work. - The detail draughtsman finalises drawings. The draughtsman uses traditional manual and tracing methods as well as computers to draw designs.

Entry to Tertiary or Further Studies			
Senior Certificate for a diploma course at a technikon. Grade 10 Certificate. Some employers prefer higher qualifications. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Technical Drawing			
Entry to Work Place			
TECHNICAL (FET) COLLEGE: If you want to become a draughtsman you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: Multi-Disciplinary Drawing Office Certificate (N4-N5). - Practical training: 3 years in-service training at a drawing office.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A draughtsman should:

- be able to transfer concepts onto paper;
- have patience and perseverance;
- be meticulously accurate;
- enjoy doing detailed work;
- be able to concentrate for long periods of time;
- have three-dimensional perception;
- have good vision;
- have good eye-hand co-ordination and free-hand drawing skills;
- be interested in and have a flair for computer work;
- have stamina (at times standing is required).

Employment Indicators – what are the important employment facts regarding this occupation

Employment Opportunities in South Africa for this Career

Exceptionally High	High	Moderate	Low

Supply of People

The number of people with the qualifications, skills (able to do it) or interest in this career, that I have to compete with

Exceptionally High number of people	High number of people	Moderate number of people	Low number of people

Income Potential

Estimated average income for people in this occupation (excluding extreme examples of high or low income):

R300 000+per year	R144 000 - R300 000	R60 000 - R144 000	R 60 000 per year

Income based on Performance

What is the chance to improve my pay in this occupation through exceptional performance, skills or business ideas?

Exceptionally High	High	Moderate	Low

Self Employment

Can I use this career to work for myself or to start a small company in this career field?

Exceptionally High	High	Moderate	Low

General Management Opportunities

What is the potential to use this occupation as a platform to become a general manager in a medium to big company or organisation?

Exceptionally High	High	Moderate	Low

International Employment Market

What is the chance of being able to use this career's qualifications and skills in the international labour market?

Exceptionally High	High	Moderate	Low

Possible Employers – where do I find this occupation?						
Government (national, provincial, local councils and government related organisations like universities, semi-government, etc.	Big private companies	Medium or small companies	Own small business: Entrepreneurial opportunities in this field	Self-employed: Contractor, consultant, own practise, freelance		
- Architectural and engineering firms - Iscor - Eskom - Sasol - Government departments - Municipalities - Construction companies - Metal manufacturing companies - Machinery construction companies - Mining companies - Transnet - Contract draughting firms - Free-lance work The draughtsman with the necessary experience and capital, can start his own business.						
Relevant Contact Details – where can I get more information on this occupation?						
- The General Secretary, SA Institute of Draughtsmen, P.O. Box 30, Bergvliet, 7864. Tel: (021) 5925918.						
Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Work performance	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities			The growth of private companies (big and small)	
Technology		Direct consumer demands – “man in the street”			My own performance and skills	

Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Driver and Stacker			
General Information			
Description – what is this occupation?			
The driver and stacker handles fork-lifting machines by moving levers and pressing pedals to control the movement of the lifting apparatus			
Typical Job Activities – what will I do in this occupation?			
The machines are usually electrically powered for indoor use and petrol or diesel powered for outdoor use. They are used to move materials from loaded pallets, boxes, tow trucks or trailer hitches to a designated point in a warehouse or other storage area. The driver and stacker uses the fork-lifting machine to: - lift the load from where it has been delivered - lift the load clear of any obstructions on the way to its destination - reverse to the track on which he has to travel - move forward to where the load is to be stored - move into the correct place - lower the load at the correct angle into its exact position. Working hours and conditions depend on the nature of the products and the industry.			
Related Occupations – which occupations are more or less the same?			
- Cargo controller - Crane operator - Driver instructor - Lift operator - Taxi-driver - Truck-driver			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
No specific requirements. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: None			
Entry to Work Place			
IN-SERVICE TRAINING: Employers offer the following in-service training routine: - The new employee initially accompanies experienced drivers so that he can gain an understanding of the whole operation; - he then practices lifting and lowering the forklift device without a load; - the next step is to lift, lower and transport "waste" loads; - finally he moves on to stacking actual loads, starting with smaller loads. ADDITIONAL REQUIREMENTS: The Occupational Health and Safety Act stipulates that a driver and stacker should be in possession of a certificate of training issued by an accredited organisation.			

What level of natural skill and/or aptitude do I need for this occupation?				
Exceptionally High	High	Moderate	Low	
A driver and stacker should: - be responsible; - be patient and have perseverance; - have good eyesight; - have good eye-hand co-ordination as well as good co-ordination between right and left; - have manual dexterity; - be able to judge distances and heights accurately; - be willing to work shifts.

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours			

Driving Instructor			
General Information			
Description – what is this occupation?			
A driving instructor teaches people the theoretical and practical aspects of driving a motor car.			
Typical Job Activities – what will I do in this occupation?			
The theoretical training comprises lectures and demonstrations on how to handle a vehicle in an emergency, driving techniques and the mechanical operation of a vehicle. The instructor may use blackboard diagrams, audio-visual aids and driving simulators to accomplish this task. The practical training involves the learner driver actually starting the car, driving and parking (first in the driving-school grounds and then out on the public road) while the instructor observes the learner's driving habits and reactions under various conditions. The driving instructor encourages the perfection of the learner driver's technique until a satisfactory level of competence has been attained and the learner is able to acquire a driver's licence.			
Related Occupations – which occupations are more or less the same?			
- Cargo controller - Driver and stacker - Driver's assistant - Lift operator - Police official - Taxi-driver - Traffic official - Truck-driver			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
No specific requirements. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Languages			

Entry to Work Place			
Candidates who have at least 5 years of driving experience will stand a much better chance of securing a position. The law requires that a practising driving instructor must be in possession of an Instructor's Licence which is issued by the Department of Traffic. This is renewable annually and it is a condition of renewal that the driving instructor repeats the practical driving test. A driving school will accept an application for a position as a driving instructor, even without the necessary licence, provided that a person has the right qualities for the position. If they are satisfied that a person is suited to the position, they will assist him in obtaining an Instructor's Licence and will also cover all the necessary fees. If a driving instructor wishes to start a driving school the following steps should be taken: - collect an application form from the nearest police station; - return the completed form to the police station with the application fee; - receive a receipt for the application fee and a form to be completed by a medical examiner; - hand in the completed medical form at the police station (at this point he will be fingerprinted); - the forms and fingerprints will be sent to central government to check whether any criminal offences have been committed; - after a period of approximately 2 months he will receive correspondence from central government advising him where to go for the Instructor's Licence or K53 test; - purchase a dual-control car in which to do the test (this vehicle is essential to run a driving school); - take the test to prove that his driving school has been registered as a company and that it is well advertised. There are moves afoot to convert the Instructor's Licence test into a full diploma course and to make possession of the diploma a legal requirement of practising as a driving instructor.

Dry Cleaner and Laundry Worker			
General Information			
Description – what is this occupation?			
The work entails operating automatic dry-cleaning machines by:			
Typical Job Activities – what will I do in this occupation?			
- loading articles for cleaning - manipulating switches and levers - operating the extractor that removes excess solvent - tending the tumbler that dries the articles - removing the odour of solvent - draining dirty solvent - loading chemicals to the solvent to facilitate filtration. Some very soiled or delicate items are cleaned by hand. A laundry worker washes and irons clothing and linen using industrial automatic washing machines and tumble dryers. The laundry supervisor determines the sequence in which the laundry has to be done to ensure a quick and efficient service to customers. The laundry is checked for specific cleaning requirements and finished laundry is examined to check that standards are maintained. The laundry worker regularly checks the machines for malfunctions, investigates customers' complaints and reads literature in respect of new cleaning materials and equipment.			
Related Occupations – which occupations are more or less the same?

Earth-moving Equipment Mechanic			
General Information			
Description – what is this occupation?			
An earth-moving equipment mechanic specialises in the mechanical work required on the heavy machinery used for the construction of highways, dams, airports, pipelines and in mining operations.			
Typical Job Activities – what will I do in this occupation?			
The earth-moving equipment mechanic performs routine maintenance on the machinery and, if an operator reports a fault, he searches for its cause. The equipment is first inspected to see if the problem can be easily detected. If not, the mechanic partially dismantles the engine to check parts for damage or excessive wear. You must then make the necessary repairs or organise replacement parts. The earth-moving equipment mechanic is responsible for looking after all the parts and components of the construction equipment, including the tyres, mechanical components, hydraulic systems, power shift transmissions, electrical and fuel systems.			
Related Occupations – which occupations are more or less the same?			
- Machine worker - Motor mechanic - Rigger - Tractor and agricultural machinery mechanic			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate. Some employers prefer higher qualifications. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Trade Theory, Technika: Mechanical, Technical Drawing, Motor Mechanics			
Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become an earth-moving equipment mechanic you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical(FET) college or a correspondence course at Technisa. - Practical training: In-service training under supervision of a qualified tradesman. - Duration of course: 80 weeks. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become an earth-moving equipment mechanic you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			

What level of natural skill and/or aptitude do I need for this occupation?				
Exceptionally High	High	Moderate	Low	
An earth-moving equipment mechanic should: - work independently; - think analytically; - have a practical and mechanical aptitude; - be responsible; - have initiative; - work quickly and efficiently

Ecologist			
General Information			
Description – what is this occupation?			
The ecologist undertakes environmental studies where the influence that humans have on the natural environment is investigated, e.g. population size, housing, recreational facilities, pollution and farming.			
Typical Job Activities – what will I do in this occupation?			
You will try to rectify imbalances caused to the environment by humans. As an ecologist you will work both outdoors and indoors. You will observe and gather material that may help you to solve ecological problems. You will also spend time in the laboratory analysing and interpreting data. This data will then be used to improve understanding of the ecosystem. Commercial utilisation of the ecologist's skills has increased along with media and public interest in conserving our limited resources. Large building projects, particularly in areas regarded as being ecologically sensitive, cannot go ahead in these times without a full report from a professional ecologist - and often more than one ecologist is enlisted by different interest groups attempting to gain public approval for their agendas.			
Related Occupations – which occupations are more or less the same?

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like physical work

Economic Geologist			
General Information			
Description – what is this occupation?			
The economic geologist studies mineral deposits and the processes leading to their formation. This information is extremely useful to mining companies as it helps them to locate and understand the nature of the resource they are mining.			
Typical Job Activities – what will I do in this occupation?			
The economic geologist essentially applies geological principles to solve practical problems in the mining industry. The training the geologist received enables him to run the geology department on a mine, and to organise a programme of prospecting in the field.			
Related Occupations – which occupations are more or less the same?			
- Ecologist - Economist - Engineering geologist - Extraction metallurgist - Miner - Mineralogist - Mine surveyor - Mining engineer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma course. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology, Geography, Economics			
Entry to Work Place			
UNIVERSITY: BSc degree with appropriate subjects.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An economic geologist should: - be curious and imaginative; - be observant and objective; - have a scientific and mathematical aptitude; - have problem solving skills; - enjoy working with others; - be flexible and adapt easily to new situations; - communicate clearly in writing and in speech; - be responsible; - be dedicated to his work; - be willing to work underground in mines; - have good health and stamina.

Editor			
General Information			
Description – what is this occupation?			
The specific duties of an editor are determined by the type of employer.			
Typical Job Activities – what will I do in this occupation?			
The editor in a book publishing firm decides if a manuscript has the potential to be a successful publication. Once a manuscript has been approved, you will arrange copyright and decide on the print, production and promotion. The copy editor in a publishing firm carefully checks the text , corrects language and factual errors and sometimes does extensive rewriting. The magazine editor assigns, accepts or rejects, prepares and sometimes writes articles for publication. You will supervise the work of other editors, writers, photographers, typesetters and advertising workers. An editor in the newspaper industry works at a hectic pace to meet deadlines. A managing editor is the owners' representative and sets editorial policy.			
Related Occupations – which occupations are more or less the same?			
- Advertising copy-writer - Advertising manager - Journalist - Marketing manager and researcher - Reporter - Translator - Technical writer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
A Senior Certificate with matric exemption for a degree course. A Senior Certificate for a diploma course. COMPULSORY SUBJECTS: Languages RECOMMENDED SUBJECTS: History			
Entry to Work Place			
An academic background is preferred but is not essential. With an appropriate diploma one may get the opportunity to be appointed as a reporter or a journalist. With experience, ability and further qualifications one may proceed to higher posts such as sub-editor and later as editor. Usually a degree in languages, communication or journalism together with relevant experience in newspaper or magazine publishing work is required.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An editor should: - have writing and language ability and a good general knowledge; - be curious and persistent; - be accurate, unbiased and objective; - work well with others; - have initiative and be resourceful; - be in good health and have physical stamina; - have a good memory; - have a good command of more than one of the official languages.

Technology		Direct consumer demands – “man in the street”		My own performance and skills		
Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to administrative work	I like physical work

EEG Technician			
General Information			
Description – what is this occupation?			
The EEG technician uses an electroencephalograph to measure the electrical activity of the brain. The records obtained are then used:			
Typical Job Activities – what will I do in this occupation?			
- by specialists to diagnose conditions such as epilepsy as well as any damage to the brain - for research in the neurological, psychological and psychiatric fields. The EEG technician records details such as age, head injuries, diseases and present symptoms. After the patient has been reassured and helped to relax, electrodes are selected and placed onto the patient's scalp in standard locations. The examination takes approximately 30 minutes and techniques which activate the brain, such as a bright flickering light or deep breathing are usually included. While the record is being made the technician observes and records the patient's behaviour. The EEG technician is also responsible for the classification and filing of reports, arranging appointments, ordering supplies and the maintenance of equipment.			
Related Occupations – which occupations are more or less the same?			
- Biological sciences technologist - Clinical technologist - Medical laboratory technician - Radiographer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics, Physical Science, Biology			
Entry to Work Place			
IN-SERVICE TRAINING: The training takes place at selected EEG laboratories over a one year period. Subjects: Neurology, Neuro-anatomy, Neuro-pathology, Electrophysiology, EEG Instrumentation and Controls, Electrical Safety. Practical experience is gained under the supervision of a qualified EEG technician.			
REGISTRATION: No diploma or certificate is issued, but after successful completion of the theoretical and practical training and examination, the student registers with the Interim Medical and Dental Council of South Africa.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An EEG technician should: - be interested in the functions of the brain and in people with functional problems; - have a desire to help the sick; - inspire confidence; - be tactful, patient and sympathetic; - have empathy with people; - have inquiring minds; - be efficient under conditions of stress; - be interested in electronic apparatus; - possess a practical aptitude.				
Employment Indicators – what are the important employment facts regarding this occupation

Electrician			
General Information			
Description – what is this occupation?			
An electrician is involved in the generation, transmission, distribution and usage of electricity.			
Typical Job Activities – what will I do in this occupation?			
The electrician installs, repairs and maintains electrically operated equipment such as generators, geysers, refrigerators and stoves. When trouble occurs you must find the cause and repair it. Repairs may involve replacing fuses, switches or wires. Once the repair is complete you will test the equipment to make sure it is working properly. The erection and insulation of pylons and the connection of high tension cables on these pylons are work supervised by an electrician. You will also be responsible for the installation of switchboards and transformers which must reduce the current. An electrician must perform regular inspections on all motors, switchgear and transformers to ensure safe functioning. The electrician working at a power station has to install and maintain power generators. Electrical meters and transformers have to be serviced regularly. An electrician can specialise in: - armature winding - cable-splicing - maintenance of high-tension cables.			
Related Occupations – which occupations are more or less the same?			
- Cable jointer - Construction electrician - Linesman and substation erector - Radio and television mechanic - Radiotrician - Refrigeration mechanic			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 10 Certificate. Some employers prefer higher qualifications. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Trade Theory, Technika: Electrical			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become an electrician you need to register with an employer providing suitable training. Training consists of theoretical and practical work: - Theoretical training: At a technical(FET) college or a correspondence course at Technisa. - Practical training: In-service training under supervision of a qualified tradesman. - Duration of course: 3 to 4 years depending on the experience of the candidate and his qualifications prior to the apprenticeship. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become an electrician you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An electrician should: - be responsible, alert and cautious; - enjoy working with his hands; - be inventive, self-reliant and accurate; - be able to work under pressure; - communicate efficiently with fellow workers; - have good health and stamina; - have good eyesight and colour vision; - have manual dexterity and mechanical aptitude.

Emergency Care Technologist			
General Information			
Description – what is this occupation?			
Emergency care technologists give immediate emergency care to sick or injured persons. They must try to resuscitate and stabilise patients and prevent further injuries.			
Typical Job Activities – what will I do in this occupation?			
Emergency care technologists drive in specially equipped vehicles to the scene of emergencies. If necessary they will request additional help from the police or fire department. At the scene they make a quick assessment of the patient and give the appropriate treatment. They may conduct any one or more of the following procedures: - open airways - restore breathing - control bleeding - treat for shock - administer oxygen - immobilise fractures - assist in child birth - manage emotionally disturbed patients - treat and assist heart attack victims Emergency care technologists work indoors and outdoors in all types of weather. Much of their time is spend kneeling, standing bending and lifting. They are also exposed to conditions such as AIDS, hepatitis-B and violence.			
Related Occupations – which occupations are more or less the same?			
- Emergency Care Workers - Workers in other health occupations			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate for a diploma course. Grade 9 Certificate for in-service training. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology			

Entry to Work Place			
IN-SERVICE TRAINING: Basic Ambulance Course (BAC): A 4 week orientation and training course must be passed for permanent appointment. AMBULANCE COLLEGE: After 6 months service the candidate may enrol for the Ambulance Emergency Assistant (AEA) course of 11 weeks offered by the Ambulance College. Successful candidates register at the Interim Medical and Dental Council (INMDC) as ambulance emergency assistant. ADVANCED TRAINING COURSES: Basic Medical Rescue Course Critical Care Assistant Course Minimum Safety Driving Course ADDITIONAL REQUIREMENTS: A prospective ambulance man should be 18 and in possession of a light vehicle driver's license.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An emergency care technologist should: - have the ability to make quick decisions in a calm and assured way; - be emotionally stable; - be sympathetic, responsible and sincere; - be physically fit; - have good dexterity.

Engineer: Aeronautical Engineer			
General Information			
Description – what is this occupation?			
The aeronautical engineer is regarded as competent and sufficiently specialised to plan, design, develop, manufacture and test aircraft, missiles, satellites and other relevant aeronautical products and systems.			
Typical Job Activities – what will I do in this occupation?			
You will usually work as part of a team with each team member specialising in a different area. An aeronautical engineer may specialise in one of the following fields: - Structural analysis: The analysis of static and dynamic loads and the choice of construction materials and production methods of airframe. - Aerodynamics: The study of airflow over an aircraft to determine its configuration, stability, control and performance and power requirements. - Propulsion: The design, development, production, assembly and testing of aircraft engines. - Systems: Definition, simulation, integration and evaluation of subsystems. - Manufacture and production: Ensure a product of high quality with the use of rigid standards and stringent control throughout the production process. - Avionics: This field involves aspects such as flight instrumentation, radar, computers, navigation equipment, communication systems and sensors (height and speed). - Servo- and power systems: The use of hydraulic and electric systems for the stability and control of aircraft and missiles. - Certification: Systematic flight tests to prove that an aircraft is airworthy and performs as required.			
Related Occupations – which occupations are more or less the same?			
- Aeronautical engineering technician - Electronics engineer - Electronics engineering technician - Engineering geologist - Hydraulics engineer - Metallurgist - Rubber technologist - Test engineer (aircraft)			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Computer Studies, Technical Drawing NOTE: The Engineering Faculties of some Universities offer a support program to help students to become self sufficient and capable to complete the very demanding engineering course. The program is aimed at students from communities which lack proper education facilities. Only students with matric exemption with a minimum of a D-symbol (Higher Grade) will be considered.			

Entry to Work Place			
REGISTRATION: A person who has obtained a recognised BSc(Eng) or BEng degree is eligible for registration as Engineer in Training. After gaining at least 3 years of appropriate practical experience an aeronautical engineer may register as a Professional Engineer under the auspices of the Engineering Council of South Africa. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An aeronautical engineer should: - be curious and creative; - have above average ability in Mathematics and Physical Science; - be able to express him/herself clearly in speech and in writing; - be able to work well with others and have leadership qualities; - be responsible; - do his/her work to perfection as errors can easily result in the loss of human lives.

Engineer: Aeronautical Engineering Technician			
General Information			
Description – what is this occupation?			
An aeronautical engineering technician works with engineers and scientists to design and produce aircrafts, missiles and spacecrafts.			
Typical Job Activities – what will I do in this occupation?			
The aeronautical engineering technician: - helps the engineer to prepare layouts and models of structures, control systems and equipment installations by collecting information, making calculations and performing laboratory tests - prepares or checks drawings for technical accuracy, practicality and economy. The aeronautical engineering technician may work as a representative for a manufacturer and serve as a link between the company and customers. You may also have to prepare technical information for manuals, bulletins, catalogues and other literature.			
Related Occupations – which occupations are more or less the same?			
- Aeronautical engineer - Aircraft avionician - Aircraft radar- and radiotrician - Electronics engineer - Electronics engineering technician - Engineering geologist - Hydraulics engineer - Metallurgist - Rubber technologist - Test engineer (aircraft)			
Educational Requirements - which qualifications do I need to enter this occupation?

Exceptionally High	High	Moderate	Low	
Possible Employers – where do I find this occupation?				
Government (national, provincial, local councils and government related organisations like universities, semi-government, etc.	Big private companies	Medium or small companies	Own small business: Entrepreneurial opportunities in this field	Self-employed: Contractor, consultant, own practise, freelance
- Denel Aviation - Aircraft manufacturing or maintenance companies - South African Airways - South African Air Force - Commercial and private airlines - Department of Transport - Armscor				

Relevant Contact Details – where can I get more information on this occupation?						
- The Director, Engineering Council of SA (ECSA), P.O. Box 691, Bruma, 2026. Tel: (011) 6079500. - The Institute Secretary, SA Institute for Aerospace Engineering (SAIAE), P.O. Box 14717, Sinoville, Pretoria, 0129. Tel: (012) 8081359.						
Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Work performance	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities		The growth of private companies (big and small)		
Technology		Direct consumer demands – “man in the street”		My own performance and skills		
Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like physical work

Engineer: Agricultural Engineer			
General Information			
Description – what is this occupation?			
An agricultural engineer applies engineering principles as well as knowledge of agricultural practice to solve agricultural problems.			
Typical Job Activities – what will I do in this occupation?			
You will combine logic and practical thinking with initiative and innovation. The agricultural engineer manages living things and life-giving resources in such a way as to protect and preserve them by using mechanical, civil and electronic engineering skills. You will design equipment and buildings which can process them more effectively and ensure their renewability. The agricultural engineer can work beyond the farm boundary in areas such as forestry, water resource management, food processing, urban and rural development, machinery design and manufacturing. The job functions of the agricultural engineer can include management, development, design, consulting, research, teaching and counselling.			
Related Occupations – which occupations are more or less the same?			
- Agricultural adviser: consultant - Agricultural chemist - Agricultural engineering technologist - Agricultural researcher - Agricultural scientist - Agricultural technician - Agriculturist - Animal scientist - Botanist - Dairy scientist - Farmer - Nature conservationist - Poultry scientist - Silviculturist - Veterinary technologist - Wine-maker			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Agricultural Science NOTE: The Engineering Faculties of some Universities offer a support program to help students to become self sufficient and capable to complete the very demanding engineering course. The program is aimed at students from communities which lack proper education facilities. Only students with matric exemption with a minimum of a D-symbol (Higher Grade) will be considered.			

Entry to Work Place			
REGISTRATION: A person who has obtained a recognised BSc(Eng) or BEng degree is eligible for registration as Engineer in Training. After gaining at least 3 years of appropriate practical experience as an agricultural engineer, you may register as a Professional Engineer under the auspices of the Engineering Council of South Africa. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An agricultural engineer should: - be interested in soil, plants and animals; - have an aptitude for biology; - be able to communicate with people; - be practical; - display scientific interest; - be enthusiastic and responsible; - have perseverance.			
Employment Indicators – what are the important employment facts regarding this occupation			
Employment Opportunities in South Africa for this Career			
Exceptionally High	High	Moderate	Low
Supply of People			
The number of people with the qualifications, skills (able to do it) or interest in this career, that I have to compete with			
Exceptionally High number of people	High number of people	Moderate number of people	Low number of people
Income Potential			
Estimated average income for people in this occupation (excluding extreme examples of high or low income):			
R300 000+per year	R144 000 - R300 000	R60 000 - R144 000	R 60 000 per year
Income based on Performance			
What is the chance to improve my pay in this occupation through exceptional performance, skills or business ideas?			
Exceptionally High	High	Moderate	Low
Self Employment			
Can I use this career to work for myself or to start a small company in this career field?			
Exceptionally High	High	Moderate	Low
General Management Opportunities			
What is the potential to use this occupation as a platform to become a general manager in a medium to big company or organisation?			
Exceptionally High	High	Moderate	Low
International Employment Market			
What is the chance of being able to use this career's qualifications and skills in the international labour market?			
Exceptionally High	High	Moderate	Low

Possible Employers – where do I find this occupation?						
Government (national, provincial, local councils and government related organisations like universities, semi-government, etc.	Big private companies	Medium or small companies	Own small business: Entrepreneurial opportunities in this field	Self-employed: Contractor, consultant, own practise, freelance		
- Department of Agriculture - Commercial organisations such as manufacturers of agricultural remedies and food companies - Industrial companies - Government and private research institutes - Colleges and universities - SABS - Control boards - Agricultural unions - Co-operatives - Large farming undertakings - CSIR A skilled and entrepreneurial agricultural engineer can start his own consulting or manufacturing business.						
Relevant Contact Details – where can I get more information on this occupation?						
- The Director, SA Society for Professional Engineers (SPE), P.O. Box 78433, Sandton, 2146. Tel: (011) 7830765/8841445. - The Director, Engineering Council of SA (ECSA), P.O. Box 691, Bruma, 2026. Tel: (011) 6079500. -The Secretary, SA Institute of Agricultural Engineers(SAIAE), Private Bag X519, Silverton, 0127. Tel: (012) 8424000.						
Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Work performance	Do presentations, seminars, publish articles, etc.	General management studies

Engineer: Biomedical Engineer			
General Information			
Description – what is this occupation?			
A biomedical engineer uses engineering principles to solve medical and health-related problems.			
Typical Job Activities – what will I do in this occupation?			
The biomedical engineer designs and develops medical instruments and devices such as the heart-lung machine, the iron lung, the artificial kidney machine, realistic artificial limbs and organs such as heart valves and hips, pacemakers and monitoring devices. You will also adapt computers to serve medicine. The biomedical engineer: - conducts research ranging from the study of engineering aspects of human biological systems to the improvement of existing medical devices - arranges tests to ensure the continuing safety of electronic, electrical and mechanical equipment used for the diagnosis, treatment and monitoring of patients - advises and recommends the purchase of new equipment to administrators - trains and supervises technicians.			
Related Occupations – which occupations are more or less the same?			
- Biomedical technologist - Chemical engineer - Manufacturer's representative - Radiological technologist - Systems analyst			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology, Physiology			

Entry to Work Place			
UNIVERSITY: At present the University of Cape Town is the only South African university offering degree courses in biomedical engineering. The Department of Biomedical Engineering forms part of the Faculty of Medicine at the University of Cape Town and the Groote Schuur group of teaching hospitals. A Graduate Diploma in Clinical Engineering can also be followed at the Department of Biomedical Engineering. The Department of Electronics Engineering of the University of Pretoria provides courses related to biomedical engineering. Post-graduate study: Since undergraduate training in engineering or physical sciences is an entry requirement, courses in biomedical engineering consist of post-graduate programmes leading to the: BSc (Med) (Hons) Biomedical Science. MSc (Med) Biomedical Engineering or Biomedical Science. MPhil and PhD degree. REGISTRATION: A biomedical engineer who wants to practise in a clinical setting must register with the Interim South African Medical and Dental Council as a biomedical engineer. The MSc (Med) degree in biomedical engineering is recognised by the Engineering Council of South Africa and by the Interim South African Medical and Dental Council as partial credit towards registration as a professional engineer and a biomedical engineer respectively. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A biomedical engineer should: - work well with others; - be able to communicate well in speech and in writing; - be able to work independently; - be a good decision maker; - have perseverance and be patient; - be flexible; - have mechanical ability; - possess finger and hand dexterity; - have good eye-hand co-ordination.			
Employment Indicators – what are the important employment facts regarding this occupation			
Employment Opportunities in South Africa for this Career			
Exceptionally High	High	Moderate	Low

Engineer: Chemical Engineer			
General Information			
Description – what is this occupation?			
A chemical engineer designs and operates processes for the production of chemicals, plastics, minerals and other raw materials.			
Typical Job Activities – what will I do in this occupation?			
You may work in a crude oil refinery, coal and gas industry, metallurgical industry as well as in industries involved in the production of food, textiles, plastics, explosives, cement, etc. The duties of the chemical engineer include: - Research and development: The chemical manufacturing industry is based on processes discovered and developed in the research laboratory. - Economic evaluation: The economic viability of a production process must be determined by the chemical engineer in co-operation with financial and marketing specialists. - Plant and equipment design: The manufacturing process entails: -- selecting the process and type of equipment -- compiling mass and energy balances -- calculating the capacity and dimensions of the equipment required for the operation of units such as reactors, heating and cooling systems, filters and pipelines -- selecting the control system of the plant to control rate of flow, temperature, pressure and concentration -- determining flow rate and energy usage -- analysing potential hazards to ensure a safe working environment. - Equipment manufacture and plant construction: The chemical engineer is involved in the manufacture of necessary equipment as well as the layout of the factory. - Plant operation: The chemical engineer is responsible for: -- the testing and commissioning of plant units -- training of operating staff -- the start-up of the plant -- the efficient and cost-effective running of the factory -- solving of problems. - Management: As a manager it is the engineer's responsibility to see that the chemical plant operates at a profit.			
Related Occupations – which occupations are more or less the same?			
- Agricultural engineer - Biomedical engineer - Ceramics technologist - Chemical engineering technician - Chemist - Metallurgical engineer - Petroleum engineer - Pharmacist - Pharmacist assistant			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training

Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: None			
Entry to Work Place			
REGISTRATION: A person who has obtained a recognised BSc(Eng) or BEng degree is eligible for registration as Engineer in Training. Engineer: Chemical Engineering Technician			
General Information			
Description – what is this occupation?			
Chemical Engineering Technicians work in close liaison with the Chemical Engineer to design and operate processes for the large scale production of chemicals, plastic, synthetic fibres, minerals and other useful commodities.			
Typical Job Activities – what will I do in this occupation?			
Chemical engineering technicians act as a link between the plant operator and the chemical engineer and spend a substantial part of their time in the production area of a factory. Duties may include: - Collecting information related to a chemical process by taking measurements and consulting with operators. - Analysing samples in a chemical laboratory. - Assisting a chemical engineer to design equipment and develop processes for large scale chemical manufacturing. - Building experimental plants, testing the processes concerned and solving technical problems. - Performing calculations and preparing reports required by factory managers. - Determining the economic viability of projects.			
Related Occupations – which occupations are more or less the same?			
- Chemical engineer - Chemical engineering technologist - Ceramics technologist - Metallurgical engineer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
• Entry to tertiary studies Senior Certificate or N3 Certificate. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Technika: Civil, Technical Drawing, Computer Studies			
Entry to Work Place			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A chemical engineering technician should: - have a critical analytical mind; - have an aptitude for mathematics, chemistry and physics; - have above average intellectual abilities			

Employment Indicators – what are the important employment facts regarding this occupation				
Employment Opportunities in South Africa for this Career				
Exceptionally High	High	Moderate	Low

What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A chemical engineering technologist should: - have a critical analytical mind; - have an aptitude for mathematics, chemistry and physics; - have above average intellectual abilities.			

Employment Indicators – what are the important employment facts regarding this occupation				
Employment Opportunities in South Africa for this Career				
Exceptionally High	High	Moderate	Low	
Supply of People The number of people with the qualifications, skills (able to do it) or interest in this career, that I have to compete with				
Exceptionally High number of people	High number of people	Moderate number of people	Low number of people	
Income Potential Estimated average income for people in this occupation (excluding extreme examples of high or low income):				
R300 000+per year	R144 000 - R300 000	R60 000 - R144 000	R 60 000 per year	
Income based on Performance What is the chance to improve my pay in this occupation through exceptional performance, skills or business ideas?				
Exceptionally High	High	Moderate	Low	
Self Employment Can I use this career to work for myself or to start a small company in this career field?				
Exceptionally High	High	Moderate	Low	
General Management Opportunities What is the potential to use this occupation as a platform to become a general manager in a medium to big company or organisation?				
Exceptionally High	High	Moderate	Low	
International Employment Market What is the chance of being able to use this career's qualifications and skills in the international labour market?				
Exceptionally High	High	Moderate	Low	
Possible Employers – where do I find this occupation?				
Government (national, provincial, local councils and government related organisations like universities, semi-government, etc.	Big private companies	Medium or small companies	Own small business: Entrepreneurial opportunities in this field	Self-employed: Contractor, consultant, own practise, freelance
Employment opportunities are widespread. Examples of chemical process industries are for example: petroleum refining, synthetic fuel manufacture, food processing, brewing, minerals processing, pollution control, manufacture of synthetic fibres, fertilizers and explosives.				
Relevant Contact Details – where can I get more information on this occupation?				

Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Work performance	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities			The growth of private companies (big and small)	
Technology		Direct consumer demands – “man in the street”			My own performance and skills	
Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like physical work

Engineer: Civil Engineer			
General Information			
Description – what is this occupation?			
A civil engineer is responsible for the planning, design, maintenance and management of construction projects. These projects are concerned with the construction of multi-storey buildings, roads, bridges, harbours, airports, sport stadiums and water and sewage purification plants.			
Typical Job Activities – what will I do in this occupation?			
Civil engineering involves the constant recreation, improvement and conservation of the environment, as well as the establishment of the facilities required for the effective functioning of the community.			
The civil engineer designs major structures and monitors the construction process. You will supervise surveyors, draughtsmen, technicians and other workers.			
The civil engineer may also carry out research, teach at technikons and universities or serve as a consultant for engineering, construction or architectural firms.			
Civil engineering is a very broad field and the engineer usually specialises in one of the following:			
- Geotechnical work - Transportation - Marine environment - Municipal services - Construction work - Structural design - Hydraulic engineering - Project management.			
Related Occupations – which occupations are more or less the same?			
- Aeronautical engineer - Aeronautical engineering technician - Architectural technologist - Civil engineering technician - Civil engineering technologist - Industrial engineer - Quantity surveyor - Town and regional planner			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Computer Studies, Geography, Technical Drawing NOTE: The Engineering Faculties of some Universities offer a support program to help students to become self sufficient and capable to complete the very demanding engineering course. The program is aimed at students from communities which lack proper education facilities. Only students with matric exemption with a minimum of a D-symbol (Higher Grade) will be considered.			

Entry to Work Place			
REGISTRATION: A person who has obtained a recognised BSc(Eng) or BEng degree is eligible for registration as Engineer in Training. After gaining at least 3 years of appropriate practical experience a civil engineer may register as a Professional Engineer under the auspices of the Engineering Council of South Africa. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
- have an aptitude for science and mathematics; - be able to visualise objects three dimensionally; - be creative and have initiative; - be accurate and persistent; - be able to make decisions; - show good judgement; - work well with others; - express ideas clearly; - have good health and stamina.			
Employment Indicators – what are the important employment facts regarding this occupation			
Employment Opportunities in South Africa for this Career			
Exceptionally High	High	Moderate	Low
Supply of People The number of people with the qualifications, skills (able to do it) or interest in this career, that I have to compete with

Engineer: Civil Engineering Technician			
General Information			
Description – what is this occupation?			
The civil engineering technician fills the gap between the tasks performed by the engineer and those performed by construction workers.			
Typical Job Activities – what will I do in this occupation?			
Because of the complexity of most civil engineering projects, the civil engineering technician operates as a member of a team. He assists civil engineers in: - erecting reinforced concrete, structural steel, timber and masonry structures - construction of roads, bridges and dams - building of canals and pipe lines - water purification and sewage treatment projects - construction and maintenance of airports, railways and harbours - housing projects - municipal services. The work of a civil engineering technician is functional and practical and you will need a fundamental knowledge of the qualities and properties of materials used. Projects should be executed in a technically correct manner and should comply with the requirements of the client.			
Related Occupations – which occupations are more or less the same?			
- Bricklayer - Building supervisor - Building surveyor - Civil engineering technologist - Construction manager - Draughtsman - Land surveyor - Town and regional planner			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate or N3 Certificate. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Technika: Civil, Technical Drawing, Computer Studies			

Entry to Work Place			
REGISTRATION: A person who has obtained the recognised qualifications is eligible for "In Training" registration: - Recognised Government Certificate of Competency: Certificated Engineer in Training or - NDip (50% pass rate): Engineering Technician in Training. After gaining between 2 to 4 years of appropriate practical experience a civil engineering technician may register under the auspices of the Engineering Council of South Africa as: - Registered Certificated Engineer or - Registered Engineering Technician.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A civil engineering technician should: - be an accurate and careful worker; - enjoy detailed work; - have a scientific and mathematical aptitude; - have a sense of responsibility; - have perseverance and resourcefulness; - be able to adapt effortlessly to changing circumstances and work situations; - work well without supervision; - have good interpersonal relations and communication skills.

Engineer: Civil Engineering Technologist			
General Information			
Description – what is this occupation?			
A civil engineering technologist assists a civil engineer in the construction of large structures such as roads, bridges, airports, buildings and dams. Your function will be to liaise with the engineers on a theoretical level and with the technicians on a technical level.			
Typical Job Activities – what will I do in this occupation?			
As a civil engineering technologist, your work will vary widely according to the field of civil engineering you are working in e.g. structural, geotechnical, transport, water purification and municipal services. The work can be divided into two basic activities namely: - Planning and design which include: -- Surveying -- Research -- Design and draughtsmanship -- Costing and estimating. -- Materials investigation and testing. - Construction and maintenance which include: -- Day-to-day planning, control and supervision of civil engineering works -- Selection, deployment and supervision of heavy construction plants. A civil engineering technologist is a problem-solver. You will meet the challenges of pollution, the deteriorating infrastructure, traffic congestion, energy needs, urban redevelopment, water supplies and community planning.			
Related Occupations – which occupations are more or less the same?			
- Building supervisor - Building surveyor - Civil engineer - Civil engineering technician - Construction manager - Landscape architect - Land surveyor - Town and regional planner - Quantity surveyor

Engineer: Computer Engineer			
General Information			
Description – what is this occupation?			
As the world becomes subject to the conditions of a Global Village, engineers are required to design and implement large computer systems to solve problems for governments and organisations.			
Typical Job Activities – what will I do in this occupation?			
The computer engineer: - uses systems engineering to integrate a broad spectrum of technologies such as telecommunications, computer systems and software engineering - establishes data, voice and image communication systems operating at all levels across global communication networks - designs computer systems for consumer products and manufacturing equipment such as vehicle control systems, hi-fi systems, video cameras, washing machines, cellular phones, manufacturing robots, etc. All these applications require: - an ability to design - knowledge to operate hardware components e.g. microprocessors, embedded controllers, personal computers, routers, transmitters - skill to develop the necessary software e.g. Assembler, C++, Java - implementation on a variety of platforms such as Win95, WindowsNT, UNIX.			
Related Occupations – which occupations are more or less the same?			
- Computer consultant - Computer operator - Computer operations and project manager - Computer programmer - Computer technician - Electronics engineer - Network controller - Systems analyst - Website designer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Computer Studies NOTE: The Engineering Faculties of some Universities offer a support program to help students to become self sufficient and capable to complete the very demanding engineering course. The program is aimed at students from communities which lack proper education facilities. Only students with matric exemption with a minimum of a D-symbol (Higher Grade) will be considered.			

Entry to Work Place			
UNIVERSITY: BEng Computer Engineering REGISTRATION: A person who has obtained a recognised BSc(Eng) or BEng degree is eligible for registration as Engineer in Training. After gaining at least 3 years of appropriate practical experience an computer engineer may register as a Professional Engineer under the auspices of the Engineering Council of South Africa. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A computer engineer should; - have above average intelligence; - possess a special kind of ingenuity and inventiveness; - have an inquiring and analytical mind; - be able to manage and organise projects; - function well with other people; - work under pressure; - have perseverance and motivation for achievement; - be well disciplined; - be a precise and accurate worker; - have an aptitude for mathematics and computer science; - be able to write technical reports.

Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like physical work

Engineer: Electrical Engineer			
General Information			
Description – what is this occupation?			
The electrical engineer is involved in the design, manufacture, installation and management of various appliances and installations that generate or use electrical energy such as:			
Typical Job Activities – what will I do in this occupation?			
- Thermic coal power stations where chemical energy is transformed to electrical energy. - The use of solar cells and wind turbines for the generation of electrical energy. - Transmission lines and substations that are used to distribute electrical energy for power, heating and lighting. The electrical engineer: - tests and maintains electrical subsystems and systems - is involved in analysis and problem formulation - conducts research to better the utilisation of energy resources - designs and develops new components - is responsible for managing projects. As an electrical engineer you will work in an office, design centre or laboratory. You will also work on large constructions and installations such as power stations.			
Related Occupations – which occupations are more or less the same?			
- Aircraft avionician - Automotive engineering technician - Broadcasting and sound technician - Chemical engineer - Chemistry technician - Civil engineer - Coal technologist - Computer consultant - Electrical engineering technologist - Electrician - Electronics engineer - Industrial engineer - Mechanical engineer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Computer Studies, Technical Drawing, Technika: Electrical NOTE: The Engineering Faculties of some Universities offer a support program to help students to become self sufficient and capable to complete the very demanding engineering course. The program is aimed at students from communities which lack proper education facilities. Only students with matric exemption with a minimum of a D-symbol (Higher Grade) will be considered.			

Entry to Work Place			
REGISTRATION: A person who has obtained a recognised BSc(Eng) or BEng degree is eligible for registration as Engineer in Training. After gaining at least 3 years of appropriate practical experience an electrical engineer may register as a Professional Engineer under the auspices of the Engineering Council of South Africa. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An electrical engineer should: - have above average intellectual ability; - be able to visualise abstract concepts; - have above average mathematical and scientific aptitude; - show originality and initiative; - be able to make fast and correct decisions during times of crisis; - function well with other people; - be able to manages projects; - have an inquiring, analytical mind; - have good health and physical stamina.			
Employment Indicators – what are the important employment facts regarding this occupation			
Employment Opportunities in South Africa for this Career			
Exceptionally High	High	Moderate	Low
Supply of People			
The number of people with the qualifications, skills (able to do it) or interest in this career, that I have to compete with			
Exceptionally High number of people	High number of people	Moderate number of people	Low number of people
Income Potential			
Estimated average income for people in this occupation (excluding extreme examples of high or low income):			
R300 000+per year	R144 000 - R300 000	R60 000 - R144 000	R 60 000 per year
Income based on Performance			
What is the chance to improve my pay in this occupation through exceptional performance, skills or business ideas?			
Exceptionally High	High	Moderate	Low
Self Employment			
Can I use this career to work for myself or to start a small company in this career field?			
Exceptionally High	High	Moderate	Low
General Management Opportunities			
What is the potential to use this occupation as a platform to become a general manager in a medium to big company or organisation?			
Exceptionally High	High	Moderate	Low
International Employment Market			
What is the chance of being able to use this career's qualifications and skills in the international labour market?			
Exceptionally High	High	Moderate	Low

Possible Employers – where do I find this occupation?						
Government (national, provincial, local councils and government related organisations like universities, semi-government, etc.	Big private companies	Medium or small companies	Own small business: Entrepreneurial opportunities in this field	Self-employed: Contractor, consultant, own practise, freelance		
- Government departments - Transnet - Eskom - Iscor - CSIR - Municipalities - Universities and technikons - Manufacturers - Engineering consultants The registered engineer with the necessary experience and initiative can work as consultant for any of the above-mentioned organisations. He can also starts his own manufacturing engineering company.						
Relevant Contact Details – where can I get more information on this occupation?						
- The Director, Society for Professional Engineers (SPE), P.O. Box 78433, Sandton, 2146. Tel: (011) 7830765 / 8841445 Fax: (011)8837150. spe@professionalengineers.co.za - The Director, Engineering Council of SA (ECSA), P.O. Box 691, Bruma, 2026. Tel: (011) 6079500. - The SA Association of Consulting Engineers, The Executive Director SAACE, P.O. Box 68482, Bryanston, 2021. Tel: (011) 4632022. E-mail: general@saace.co.za Website: www.saace.co.za - The Resourcing Manager, Sapref, P.O. Box 3179, Durban, 4000. Tel: (031) 4801911. - The Secretary, SA Institute of Electrical Engineers, P.O. Box 751253, Gardenvue, 2047. Tel: (011) 4873003.						
Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Work performance	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities		The growth of private companies (big and small)		
Technology		Direct consumer demands – “man in the street”		My own performance and skills		

Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like physical work

Engineer: Electrical Engineering Technician			
General Information			
Description – what is this occupation?			
As an electrical engineering technician you will use your knowledge of the distribution and application of electricity. You will often act as a link between the electrical engineer or technologist and the artisan.			
Typical Job Activities – what will I do in this occupation?			
An electrical engineering technician: - helps the electrical engineer with the processes to generate electrical energy - assists in the task of distributing electrical energy to the consumer - tests and maintains existing equipment - installs new equipment at power plants - tests new equipment to see whether it is functioning effectively.			
Related Occupations – which occupations are more or less the same?			
- Aeronautical engineering technician - Automotive electrician - Broadcasting and sound technician - Computer systems technician - Electrical engineering technologist - Electrician - Electronics engineering technician - Industrial engineering technician - Lighting technician - Telecommunications electrician			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate or N3 Certificate. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Technika: Electrical, Technical Drawing, Computer Studies			
Entry to Work Place			
REGISTRATION: A person who has obtained the recognised qualifications is eligible for "In Training" registration: - Recognised Government Certificate of Competency: Certificated Engineer in Training After gaining between 2 to 4 years of appropriate practical experience a electrical engineering technician may register under the auspices of the Engineering Council of South Africa as: - Registered Certificated Engineer or - Registered Engineering Technician.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An electrical engineering technician should: - have above average mathematical ability; - have manual dexterity; - be curious and creative; - have mechanical aptitude; - be able to get along well with others; - have good eyesight and hearing; - be in good health.

Engineer: Electrical Engineering Technologist			
General Information			
Description – what is this occupation?			
The work of an electrical engineering technologist fills the gap between the tasks performed by the engineer and those performed by the technician.			
Typical Job Activities – what will I do in this occupation?			
Electrical engineering forms an integral part of almost every industrial and household activity. The work of the electrical engineering technologist entails the design, development, installation and testing of electrical motors, generators, alternators, transformers, transmission lines, cables and switchgear. The electrical engineering technologist may specialise in: - generation of power by means of conventional and alternative energy sources - transmission and distribution of electrical power - electrical machines and power transformers - electrical protection and power electronics - illumination, networks and systems. As an electrical engineering technologist you will work in an office, design centre or laboratory. You will also work on large constructions and installations such as power stations.			
Related Occupations – which occupations are more or less the same?			
- Aircraft avionician - Automotive engineering technician - Broadcasting and sound technician - Chemical engineer - Chemistry technician - Civil engineer - Coal technologist - Computer consultant - Electrical engineer - Electronics engineer - Industrial engineer - Mechanical engineer

Engineer: Electronics Engineer			
General Information			
Description – what is this occupation?			
An electronics engineer designs systems, equipment and components for application in the fields of automation, communication, navigation, data processing and entertainment.			
Typical Job Activities – what will I do in this occupation?			
The electronics engineer: - is involved in the development of electronic components, subsystems and systems - conducts research - plans and designs - tests application possibilities - manages the manufacturing processes - follows the use of the systems in the industry and in the public sector - may also be responsible for marketing of products. The activities of the electronics engineer includes the development of: - military arms - communication systems - telephone and cellular communication - broadcasting services - signaling systems - navigation and landing aids - instrumentation for measurement and control of industrial production processes - computer and data-processing systems- equipment for entertainment. The electronics engineer works in offices, design centres, laboratories or in the field. Modern management abilities are important. The electronics engineer must be able to participate in planning, organisation and the control of proceedings.			
Related Occupations – which occupations are more or less the same?			
- Aeronautical engineer - Civil engineer - Computer engineer - Electrical engineer - Electrical engineering technologist - Electronics engineering technologist - Mechanical engineer - Radio and television mechanic - Telecommunications technician - Theatre technician			
Educational Requirements - which qualifications do I need to enter this occupation?

Engineer: Electronics Engineering Technician			
General Information			
Description – what is this occupation?			
The electronics engineering technician is involved in the practical installation, maintenance and operation of electronic equipment.			
Typical Job Activities – what will I do in this occupation?			
The electronic engineering technician: - builds circuit boards - manufactures microchips - installs electronic equipment - tests and detects faults - maintains and repairs equipment. The electronics engineering technician can work in one of the following fields: - Industrial instrumentation - Communication. - Biomedical electronics - Micro-electronics - Telecommunications - Computer systems.			
Related Occupations – which occupations are more or less the same?			
- Aeronautical engineering technician - Aircraft avionician - Civil engineering technician - Computer service technician - Domestic appliance technician - Electrical engineering technologist - Electronics engineering technologist - Mechanical engineering technician - Radio and television mechanic - Telecommunications technician - Theatre technician			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate or N3 Certificate. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Technika: Electronics, Technical Drawing, Computer Studies			

Entry to Work Place			
REGISTRATION: A person who has obtained the recognised qualifications is eligible for "In Training" registration: - Recognised Government Certificate of Competency: Certificated Engineer in Training After gaining between 2 to 4 years of appropriate practical experience an electronics engineering technician may register under the auspices of the Engineering Council of South Africa as: - Registered Certificated Engineer or - Registered Engineering Technician.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An electronics engineering technician should: - be an accurate and careful worker; - enjoy detailed work; - have a scientific and mathematical aptitude; - have a sense of responsibility; - have perseverance and resourcefulness; - work well without supervision; - have good interpersonal relations and communication skills.			
Employment Indicators – what are the important employment facts regarding this occupation			
Employment Opportunities in South Africa for this Career			
Exceptionally High	High	Moderate	Low
Supply of People			
The number of people with the qualifications, skills (able to do it) or interest in this career, that I have to compete with			
Exceptionally High number of people	High number of people	Moderate number of people	Low number of people
Income Potential			
Estimated average income for people in this occupation (excluding extreme examples of high or low income):			
R300 000+per year	R144 000 - R300 000	R60 000 - R144 000	R 60 000 per year
Income based on Performance			
What is the chance to improve my pay in this occupation through exceptional performance, skills or business ideas?			
Exceptionally High	High	Moderate	Low
Self Employment			
Can I use this career to work for myself or to start a small company in this career field?			
Exceptionally High	High	Moderate	Low
General Management Opportunities			
What is the potential to use this occupation as a platform to become a general manager in a medium to big company or organisation?			
Exceptionally High	High	Moderate	Low
International Employment Market			
What is the chance of being able to use this career's qualifications and skills in the international labour market?			
Exceptionally High	High	Moderate	Low

Possible Employers – where do I find this occupation?						
Government (national, provincial, local councils and government related organisations like universities, semi-government, etc.	Big private companies	Medium or small companies	Own small business: Entrepreneurial opportunities in this field	Self-employed: Contractor, consultant, own practise, freelance		
- Eskom - Iscor - SABS - CSIR - Telkom - Government departments - Transnet - Armscor - Manufacturers - Electronics companies						
Relevant Contact Details – where can I get more information on this occupation?						
- The Director, Engineering Council of SA (ECSA), PO Box 691, Bruma, 2026. Tel: (011) 6079500. - The SA Association of Consulting Engineers, The Executive Director SAACE, P.O. Box 68482, Bryanston, 2021. Tel: (011) 4632022 E-mail: general@saace.co.za Website: www.saace.co.za - The Secretary, SA Institute of Electrical Engineers, P.O. Box 751253, Gardenview, 2047. Tel: (011) 4873003.						
Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Work performance	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities			The growth of private companies (big and small)	
Technology		Direct consumer demands – “man in the street”			My own performance and skills	

Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like physical work

Engineer: Electronics Engineering Technologist			
General Information			
Description – what is this occupation?			
An electronics engineering technologist fills a role between the technician and the engineer. You will be more concerned with system applications than with individual items of equipment.			
Typical Job Activities – what will I do in this occupation?			
An electronics engineering technologist can specialise in one of the following fields: - Industrial instrumentation: The fault detection and testing of industrial instrumentation used in large manufacturing concerns as well as the chemical industry. - Communication: The technologist works in the communications area e.g. radio, television, radar and communication between computers. - Biomedical electronics: The installation and fault detection of electronic equipment in the medical field e.g. heart-lung machines, EEG and x-ray equipment. - Micro-electronics: Testing and manufacturing of microchips. - Telecommunications: The installation, maintenance and fault detection of equipment such as optic cables, cellular phones and satellite communication systems. - Computer systems: Manufacturing of circuit boards and writing of software.			
Related Occupations – which occupations are more or less the same?			
- Computer engineer - Domestic appliance technician - Electrical engineer - Electrical engineering technologist - Electronics engineer - Electronics engineering technician - Radio and television mechanic - Telecommunications technician - Theatre technician			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Technika: Electronics, Computer Studies			

Entry to Work Place			
REGISTRATION: A person who has obtained a recognised BTech or MTech degree is eligible for registration as Engineering Technologist in Training. After gaining at least 3 years of appropriate practical experience an electronics engineering technologist may register as a Professional Technologist (Engineering) under the auspices of the Engineering Council of South Africa. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An electronics engineering technologist should: - have above average intellectual ability; - be able to visualise abstract concepts; - have above average mathematical and scientific aptitude; - show originality and initiative; - be able to make fast and correct decisions during times of crisis; - function well with other people; - have an inquiring, analytical mind; - have good health and physical stamina.

Engineer: Genetic Engineer			
General Information			
Description – what is this occupation?			
The genetic engineer alters the DNA (molecules which make up genetic material) of an organism in order to change its characteristics.			
Typical Job Activities – what will I do in this occupation?			
You may be responsible for setting up experiments, analysing results, writing and presenting reports. Some genetic engineers work in animal research, for example, changing the genetic make-up of farm animals so that they are more profitable to the agricultural industry. Others work on developing plants that are drought or pest resistant, tolerant of herbicides or give higher yields. The genetic engineer may work with DNA to produce proteins required for the treatment of medical conditions. In some jobs, he is responsible for monitoring quality standards and supervising staff.			
Related Occupations – which occupations are more or less the same?			
- Biologist - Geneticist - Microbiologist - Physiologist - Biochemist - Biomedical engineer - Chemist - Pathologist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology			
Entry to Work Place			
Applicable qualification			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A genetic engineer should: - have a scientific approach; - be able to give attention to detail; - be precise and methodical; - be able to report accurately; - be able to work independently and as part of a team.

Engineer: Industrial Engineer			
General Information			
Description – what is this occupation?			
The industrial engineer designs better methods and facilities for manufacturing and services. You will utilise your knowledge and skills in the areas of mathematics, statistics, economics and the physical and social sciences.			
Typical Job Activities – what will I do in this occupation?			
The function of the industrial engineer entails the following: - investigations to improve work methods with regard to mechanisation and automation - development of labour standards and manpower utilisation systems - profit studies and investigations into alternative capital expenditure - medium- and long-term planning with regard to all aspects of production. To carry out all these tasks the industrial engineer will define the problem, plan an investigation, process information and finally implement his plan. The industrial engineer has the responsibility to bridge the gap between the technology driven design engineer and the profit motivated manager.			
Related Occupations – which occupations are more or less the same?			
- Civil engineer - Human resources manager - Industrial economist - Industrial engineering technician - Industrial psychologist - Marketing researcher			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Economics, Computer Studies NOTE: The Engineering Faculties of some Universities offer a support program to help students to become self sufficient and capable to complete the very demanding engineering course. The program is aimed at students from communities which lack proper education facilities. Only students with matric exemption with a minimum of a D- symbol (Higher Grade) will be considered			
Entry to Work Place			
REGISTRATION: A person who has obtained a recognised BSc(Eng) or BEng degree is eligible for registration as Engineer in Training. After gaining at least 3 years of appropriate practical experience an industrial engineer may register as a Professional Engineer under the auspices of the Engineering Council of South Africa. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			

What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An industrial engineer should: - have above average mathematical and scientific ability; - be curious and creative; - communicate well in speech and writing; - have good judgement; - work well with others; - be practical, orderly and systematic; - be adaptable.			
Employment Indicators – what are the important employment facts regarding this occupation

Engineer: Industrial Engineering Technician			
General Information			
Description – what is this occupation?			
An industrial engineering technician is directly or indirectly concerned with the practical aspects of the production of articles or objects through the optimal utilisation of raw materials.			
Typical Job Activities – what will I do in this occupation?			
The industrial technician is involved in many different occupations. These may entail many different areas of manufacturing, each of which may be attached to: - research - design - development - construction - installation - industrial supervision - maintenance - marketing - sales - management. The industrial engineering technician could for instance specialise in different aspects of metallurgical engineering, e.g. - production of metal from raw material (iron from iron ore) - refining (iron to steel) - milling (rolling ingots into finished or semi-finished products) - maintenance of machinery.			
Related Occupations – which occupations are more or less the same?			
- Chemical engineering technician - Electrical engineering technician - Food technologist - Human resources manager - Industrial economist - Industrial engineer - Industrial engineering technologist - Market researcher - Petroleum technologist - Production manager - Telecommunications technician			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate or N3 Certificate. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Computer Studies			

Entry to Work Place			
REGISTRATION: A person who has obtained the recognised qualifications is eligible for "In Training" registration: - Recognised Government Certificate of Competency: Certificated Engineer in Training. After gaining between 2 to 4 years of appropriate practical experience an industrial engineering technician may register under the auspices of the Engineering Council of South Africa as: - Registered Certificated Engineer or - Registered Engineering Technician.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An industrial engineering technician should: - be responsible; - be practical; - have manual dexterity; - be able to maintain good human relationships; - be practical, orderly and systematic; - be adaptable; - be conscious of cost aspects.			
Employment Indicators – what are the important employment facts regarding this occupation			
Employment Opportunities in South Africa for this Career

Engineer: Industrial Engineering Technologist			
General Information			
Description – what is this occupation?			
The industrial engineering technologist is involved with the production of a variety of goods such as motorcars, furniture, television sets, refrigerators, etc.			
Typical Job Activities – what will I do in this occupation?			
The industrial engineering technologist: - is responsible for the selection and layout of the machinery and equipment required in the factory - plans the work-flow in the factory - conducts time and motion studies - tries to improve the efficiency and effectiveness of the factories - manages staff - eliminates wastage of materials used - works according a prepared budget. The industrial engineering technologist is used in any industry where products are manufactured or services are provided.			
Related Occupations – which occupations are more or less the same?			
- Chemical engineering technician - Electrical engineering technician - Food technologist - Human resources manager - Industrial economist - Industrial engineer - Industrial engineering technician - Industrial psychologist - Market researcher - Petroleum technologist - Production manager - Telecommunications technician			
Educational Requirements - which qualifications do I need to enter this occupation?

Entry to Tertiary or Further Studies			
Senior Certificate. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Economics.			
Entry to Work Place			
REGISTRATION: A person who has obtained a recognised BTech or MTech degree is eligible for registration as Engineering Technologist in Training. After gaining at least 3 years of appropriate practical experience an industrial engineering technologist may register as a Professional Technologist (Engineering) under the auspices of the Engineering Council of South Africa. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			

What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An industrial engineering technologist should: - be responsible; - have initiative; - be able to think logically; - be persistent; - be creative as well as practical; - have manual dexterity; - give guidance and training; - maintain good human relationships; - be conscious of cost aspects.			
Employment Indicators – what are the important employment facts regarding this occupation			
Employment Opportunities in South Africa for this Career			
Exceptionally High	High	Moderate	Low
Supply of People			
The number of people with the qualifications, skills (able to do it) or interest in this career, that I have to compete with			
Exceptionally High number of people	High number of people	Moderate number of people	Low number of people
Income Potential			
Estimated average income for people in this occupation (excluding extreme examples of high or low income):			
R300 000+per year	R144 000 - R300 000	R60 000 - R144 000	R 60 000 per year
Income based on Performance			
What is the chance to improve my pay in this occupation through exceptional performance, skills or business ideas?			
Exceptionally High	High	Moderate	Low
Self Employment			
Can I use this career to work for myself or to start a small company in this career field?			
Exceptionally High	High	Moderate	Low
General Management Opportunities			
What is the potential to use this occupation as a platform to become a general manager in a medium to big company or organisation?			
Exceptionally High	High	Moderate	Low
International Employment Market			
What is the chance of being able to use this career's qualifications and skills in the international labour market?			
Exceptionally High	High	Moderate	Low

Possible Employers – where do I find this occupation?						
Government (national, provincial, local councils and government related organisations like universities, semi-government, etc.	Big private companies	Medium or small companies	Own small business: Entrepreneurial opportunities in this field	Self-employed: Contractor, consultant, own practise, freelance		
- Transnet - Spoornet - Mines - Iscor - Sasol - AEC - AECI - Explosives and Chemical Industries - Armscor - Large industries - Government departments - Municipalities - Hospitals - Universities and technikons						
Relevant Contact Details – where can I get more information on this occupation?						
- The Director, Engineering Council of SA (ECSA), PO Box 691, Bruma 2026 Tel: (011) 6079500.						
Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Work performance	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable		Very stable		Moderately stable		Not very stable
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation		Government strategy and activities		The growth of private companies (big and small)		
Technology		Direct consumer demands – “man in the street”		My own performance and skills		

Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like physical work

Engineer: Mechanical Engineer			
General Information			
Description – what is this occupation?			
The mechanical engineer is involved with the design, development, production, marketing, installation, maintenance and general research of machinery and mechanical equipment in almost every type of industry and technology.			
Typical Job Activities – what will I do in this occupation?			
The mechanical engineer usually specialises in one of the following fields: - Transportation: Aeronautical, marine and automotive engineering equipment, turbines and engines. - Power generation: Machinery such as steam, water and gas turbines used for driving power generators. - Agriculture: Machinery such as special tractors, harvesters, crop collectors, threshing machines, milking machines and packing machines. - Mining: Mining pumping plants, ventilation fans, conveyor belts, drilling machines. - Environmental engineering: Creating the essential artificial environment man needs in order to work comfortably (ergonomics). - Air conditioning and refrigeration: Development in this field is essential for industrial processes and preserving food. - Manufacturing: Processes and equipment used in the industry. - Petrochemical industry: Machines such as compressors, pumps, boilers and material handling equipment. - Industrial engineering: Industrial and manufacturing processes such as production technology and quality control. - Biomedical engineering: Developing of machines and devices such as the heart-lung machine, the iron lung, the artificial kidney machine, realistic artificial limbs and organs such as heart valves. The work of a mechanical engineer is intellectual as well as practical and involves planning, designing, modelling and testing of systems as well as the managing of projects.			
Related Occupations – which occupations are more or less the same?			
- Aeronautical engineer - Agricultural engineer - Biomedical engineer - Electrical engineer - Industrial engineer - Mechanical engineering technician - Mechanical engineering technologist - Mining engineer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Computer Studies, Technical Drawing NOTE: The Engineering Faculties of some Universities offer a support program to help students to become self sufficient and capable to complete the very demanding engineering course. The program is aimed at students from communities which lack proper education facilities. Only students with matric exemption with a minimum of a D-symbol (Higher Grade) will be considered.			

Entry to Work Place			
REGISTRATION: A person who has obtained a recognised BSc(Eng) or BEng degree is eligible for registration as Engineer in Training. After gaining at least 3 years of appropriate practical experience a mechanical engineer may register as a Professional Engineer under the auspices of the Engineering Council of South Africa. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A mechanical engineer should: - have an aptitude and preference for experimenting, planning and research; - enjoy detailed work; - enjoy solving problems and have an analytical mind; - be meticulously accurate in calculations and drawings; - have mathematical and mechanical aptitude; - be able to visualise objects in three dimensions; - be a good decision-maker; - be creative; - work well with others; - have managerial qualities			
Employment Indicators – what are the important employment facts regarding this occupation			
Employment Opportunities in South Africa for this Career			
Exceptionally High	High	Moderate	Low
Supply of People The number of people with the qualifications, skills (able to do it) or interest in this career, that I have to compete with

Engineer: Mechanical Engineering Technician			
General Information			
Description – what is this occupation?			
The mechanical engineering technician fills the gap between the tasks performed by the engineer or technologist and those performed by an artisan.			
Typical Job Activities – what will I do in this occupation?			
A mechanical engineering technician is involved in the development and maintenance of different machines ranging from moving machinery to mechanical appliances. This may include: - Transport: Ships, railways, aircrafts and automobiles - Power generation: Steam, gas, oil and nuclear - Air-conditioning units - Machines for factories, mines and buildings. The mechanical engineering technician studies the project instructions of the engineer or technologist to ensure that the test specifications and proposed procedures are suitable. When constructing experimental equipment and testing the performance thereof, the technician records data, plots graphs, analyses results and writes reports. You may sometimes recommend design changes. During the manufacturing process the mechanical engineering technician is responsible for the testing and inspecting of machines and equipment. The work of the mechanical engineering technician is practical and may entail routine work in laboratories and testing departments.			
Related Occupations – which occupations are more or less the same?			
- Aeronautical engineering technician - Agricultural engineering technician - Automotive engineering technician - Cartographical draughtsman technician - Draughtsman: mechanical engineering technician. - Electrician (maintenance) - Electronics technician - Industrial engineering technician - Mechanical engineer - Mechanical engineering technologist - Mining engineering technician			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate or equivalent qualification. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Technical Drawing, Technika: Mechanical, Computer Studies			

Entry to Work Place			
REGISTRATION: A person who has obtained the recognised qualifications is eligible for "In Training" registration: - Recognised Government Certificate of Competency: Certificated Engineer in Training After gaining between 2 to 4 years of appropriate practical experience a mechanical engineering technician may register under the auspices of the Engineering Council of South Africa as: - Registered Certificated Engineer or - Registered Engineering Technician.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A mechanical engineering technician should: - be an accurate and careful worker; - enjoy detailed work; - have a sense of responsibility; - have perseverance and resourcefulness; - be able to adapt effortlessly to changing circumstances and work situations; - work well without supervision.			
Employment Indicators – what are the important employment facts regarding this occupation

Engineer: Metallurgical Engineer			
General Information			
Description – what is this occupation?			
Metallurgy is the art of extracting metals from ore and forms an essential part of the mining effort. The metallurgical engineer is trained in the processes and methods for the reclamation and processing of ore and mineral resources.			
Typical Job Activities – what will I do in this occupation?			
The metallurgical engineer plays an important role in the development of metalliferous minerals. We use daily many products made from metal such as alarms, kettles, cars, etc. After the process of purification, the metallurgical engineer combines science, mathematical and engineering principles to extract various kinds of metal from the ore. The optimal correct metal for each application must be created. Apart from producing metal products the metallurgical engineer must also be able to determine the cause of defects in metals and prescribe possible solutions. Metallurgical engineering can be divided into two complimentary fields: - Extraction metallurgy or minerals processing. - Material engineering or physical metallurgy. For more information refer to the alphabetical list of occupations to find the job descriptions of: Extraction metallurgist, Materials scientist.			
Related Occupations – which occupations are more or less the same?			
- Chemist - Ecologist - Extraction metallurgist - Geochemist - Geologist - Geophysicist - Industrial engineer - Materials scientist - Metallurgical engineering technician - Meteorologist - Mineralogist - Mining engineer - Oceanographer - Physicist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology			

Entry to Work Place			
REGISTRATION: A person who has obtained a recognised BSc(Eng) or BEng degree is eligible for registration as Engineer in Training. After gaining at least 3 years of appropriate practical experience a metallurgical engineer may register as a Professional Engineer under the auspices of the Engineering Council of South Africa. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A metallurgist should: - have mathematical and scientific ability; - have a thorough knowledge of scientific methods; - think analytically; - be creative; - communicate clearly; - have leadership ability; - have good judgement and common sense; - have initiative and enthusiasm; - get along well with others.

Career Progress and Path						
Activities to enhance career progress – what can I do to improve my career progress in this occupation?						
Further Studies in the specific career field	Further studies in related fields	Experience in specific field	Work performance	Work performance	Do presentations, seminars, publish articles, etc.	General management studies
Possible career paths – which kind of career path can I follow in this occupation?						
Specialist career in the specific field	Management positions in the specific field	Management positions in related fields	General business management	Executive positions	Consultant/ contractor/ own practice/ freelance	Own business
Employment Stability						
Is the demand (the need) for this particular skills stable over the years?						
Exceptionally Stable	Very stable	Moderately stable	Not very stable			
The need for people in this occupation and with these skills is influenced by:						
Government policy and legislation	Government strategy and activities	The growth of private companies (big and small)				
Technology	Direct consumer demands – “man in the street”	My own performance and skills				

Possible reasons to consider this career – I should consider this career if I want a job where:						
The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like physical work

Engineer: Metallurgical Engineering Technician			
General Information			
Description – what is this occupation?			
The metallurgical engineering technician bridges the gap between the professional metallurgist and the artisan			
Typical Job Activities – what will I do in this occupation?			
Your training will enable you to communicate with the graduate on a technical and theoretical level and guide the artisan on a practical level. The metallurgical engineering technician assists the professional metallurgist in the search for metals and alloys with improved, desired properties. You will also assist him in finding the most economic and practical ways of extracting metals from ores. Studying and testing the structure and properties of metals to determine grain structure, soundness, consistency and the physical properties and chemical content of various metal objects do this. The metallurgical engineering technician tests the accuracy of instruments, calculates necessary changes and must be sure that the finished work meets the quality standards. The work of the metallurgical engineering technician is visible in a wide range of products. Metals are used in the construction of aeroplanes, chemical plants, cars, etc.			
Related Occupations – which occupations are more or less the same?			
- Air-conditioning, heating and refrigeration technician - Aeronautical engineering technician - Chemical engineering technician - Extraction metallurgist - Laboratory technician - Geological technician - Geotechnician - Instrument technician (tests, installs and maintains instruments) - Materials scientist - Mechanical engineering technician - Nuclear engineering technician - Mining surveyor			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate for a diploma course. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology			

Entry to Work Place			
REGISTRATION: A person who has obtained the recognised qualifications is eligible for "In Training" registration: - Recognised Government Certificate of Competency: Certificated Engineer in Training After gaining between 2 to 4 years of appropriate practical experience a metallurgical engineering technician or technologist may register under the auspices of the Engineering Council of South Africa as: - Registered Certificated Engineer or - Registered Engineering Technician or - Professional Technologist (Engineering).			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A metallurgical engineering technician should: - enjoy detailed work; - be an accurate and careful worker; - work well with all kinds of people; - work well without supervision; - have a sense of responsibility, perseverance and resourcefulness; - have an aptitude for mathematics and science; - have good eyesight; - have finger dexterity.			
Employment Indicators – what are the important employment facts regarding this occupation			
Employment Opportunities in South Africa for this Career			
Exceptionally High	High	Moderate	Low
Supply of People			
The number of people with the qualifications, skills (able to do it) or interest in this career, that I have to compete with			
Exceptionally High number of people	High number of people	Moderate number of people	Low number of people
Income Potential			
Estimated average income for people in this occupation (excluding extreme examples of high or low income):			
R300 000+per year	R144 000 - R300 000	R60 000 - R144 000	R 60 000 per year
Income based on Performance			
What is the chance to improve my pay in this occupation through exceptional performance, skills or business ideas?			
Exceptionally High	High	Moderate	Low
Self Employment			
Can I use this career to work for myself or to start a small company in this career field?			
Exceptionally High	High	Moderate	Low
General Management Opportunities			
What is the potential to use this occupation as a platform to become a general manager in a medium to big company or organisation?			
Exceptionally High	High	Moderate	Low
International Employment Market			
What is the chance of being able to use this career's qualifications and skills in the international labour market?			
Exceptionally High	High	Moderate	Low

Possible Employers – where do I find this occupation?						
Government (national, provincial, local councils and government related organisations like universities, semi-government, etc.	Big private companies	Medium or small companies	Own small business: Entrepreneurial opportunities in this field	Self-employed: Contractor, consultant, own practise, freelance		
- ISCOR - MINTEK - CSIR - SABS - AEC - Armscor - Individual mining groups - Metal manufacturing industries - Iron and steel industry						
Relevant Contact Details – where can I get more information on this occupation?						
- The Director, Engineering Council of SA (ECSA), P.O. Box 691, Bruma, 2026. Tel: (011) 6079500. - The Manager, Human Resources Division, Mintek, Private Bag X3015, Randburg, 2125. Tel: (011) 7094111. - The Chamber of Engineering Technology, P.O. Box 15236, Lyttleton, 0140. Tel: (012) 6671817.

Engineer: Mining Engineer			
General Information			
Description – what is this occupation?			
A mining engineer is responsible for the effective, safe and profitable operation of mining undertakings.			
Typical Job Activities – what will I do in this occupation?			
You will be both a mining expert and an engineer and will have a background in geology as well as civil, mechanical and electrical engineering since you must be prepared to supervise any phase of mining. The mining engineer: - is responsible for the effective managing of the mine - plans, designs, constructs and operates the facilities that are used to get solid materials out of the earth - is responsible for the economical and efficient operation of mines - takes mining safety and the safety of the workers seriously - works with geological and metallurgical engineers to locate and appraise new ore deposits - develops new equipment or processes for mining - tries to improve working conditions - conducts research on mining issues - works on problems related to protecting the environment. It is important to note that, although most of the mining engineer's time is spend in the office, you will also work on the site to see whether the instructions are followed as specified.			
Related Occupations – which occupations are more or less the same?			
- Chemical engineer - Civil engineer - Coal technologist - Extraction metallurgist - Foundry technician - Geologist - Materials scientist - Mechanical engineer - Metallurgical engineer - Nuclear power engineer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Computer Studies, Technical Drawing, Geography, Languages NOTE: The Engineering Faculties of some Universities offer a support program to help students to become self sufficient and capable to complete the very demanding engineering course. The program is aimed at students from communities which lack proper education facilities. Only students with matric exemption with a minimum of a D- symbol (Higher Grade) will be considered.			

Entry to Work Place			
REGISTRATION: A person who has obtained a recognised BSc(Eng) or BEng degree is eligible for registration as Engineer in Training. After gaining at least 3 years of appropriate practical experience a mining engineer may register as a Professional Engineer under the auspices of the Engineering Council of South Africa. FURTHER TRAINING: Certificate of Competence: The mining engineer must have a few years underground practical experience to write the certificate examinations. A candidate who passes this examination can apply for a position as mining manager. NOTE: ECSA is currently pursuing several exercises towards its goal of ensuring international competitiveness on both educational and professional level for all South African engineering practitioners.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A mining engineer should: - be able to visualise objects in three dimensions; - have good health and stamina; - have mathematical and scientific ability; - be curious; - have creativity and initiative; - be responsible; - have self-confidence; - have organisational skills; - command respect; - maintain a cool head and take charge of a situation; - have speech and writing skills.

Engineering Geologist			
General Information			
Description – what is this occupation?			
As an engineering geologist you will apply your knowledge of geological principles to the planning, design, construction, operation and safety of civil engineering projects.			
Typical Job Activities – what will I do in this occupation?			
The engineering geologist: - examines the types and geological structures of soils at construction sites - ensures that large structures such as high buildings, dams, roads or new townships are designed to suit the soil conditions or strength of the rock - oversees the firm and safe construction of the foundations in the most cost-effective way - may also examine the materials used in the construction of roads. An engineering geologist works closely with civil engineers.			
Related Occupations – which occupations are more or less the same?			
- Building supervisor - Cartographer - Civil engineer - Civil engineering technologist - Geohydrologist - Geophysicist - Land surveyor - Town and regional planner			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Geography			
Entry to Work Place			
Applicable qualification			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An engineering geologist should: - have scientific and mathematical aptitude; - have above-average intelligence; - be dedicated to his work; - have good observation skills; - work independently and as part of a team; - be adaptable; - be willing to work outdoors in all weather conditions.				
Employment Indicators – what are the important employment facts regarding this occupation

Engraver			
General Information			
Description – what is this occupation?			
The engraver decorates metal or glass using hand or machine tools to cut designs and lettering.			
Typical Job Activities – what will I do in this occupation?			
Special tools are needed to hand engrave, which is highly skilled and needs artistic ability for original designs. A machine is used to cut lettering and also for decorating items by copying patterns. Objects that need to be decorated may be of precious metal, plain or crystal glass and include guns, trophies, trays, jewellery, mirrors, plates and bowls. Some engravers produce their own designs.			
Related Occupations – which occupations are more or less the same?			
- Graphic artist - Jeweller and goldsmith - Painter and decorator			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
You need at least Grade 9.			
Entry to Work Place			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An engraver should: - have the ability to design; - work carefully and accurate; - be able to give attention to detail; - good concentration; - have dexterity and a steady hand for engraving.			
Employment Indicators – what are the important employment facts regarding this occupation

Entomologist			
General Information			
Description – what is this occupation?			
Entomology is the scientific study of insects.			
Typical Job Activities – what will I do in this occupation?			
The entomologist may do research work or can be employed as an extension officer and consultant. As a researcher an entomologist works in a variety of fields: - conducts detailed studies of insects and their behaviour - taxonomy, which entails the classification and documentation of insect fauna - the use of beneficial insects - biological control of harmful insects - integrated pest management - veterinary and medical entomology. As extension officer and consultant the entomologist gives advice and technical assistance on the above-mentioned subjects to a wide variety of people.			
Related Occupations – which occupations are more or less the same?			
- Animal scientist - Biochemist - Ecologist - Forester - Herpetologist - Ichthyologist - Marine biologist - Microbiologist - Oceanographer - Zoologist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Biology			
Entry to Work Place			
UNIVERSITY: BSc degree: Major subjects include Zoology and Entomology in combination with one of the following: Botany, Chemistry, Physiology, Microbiology, Mathematics, Plant Pathology, Genetics. BSc (Agric) degree with Entomology as a major in combination with Horticulture and Plant Production. Post-graduate study: A BSc Honours degree is recommended.			

What level of natural skill and/or aptitude do I need for this occupation?				
Exceptionally High	High	Moderate	Low	
An entomologist should: - love nature; - have an interest in insects; - have an aptitude for mathematical and biological subjects; - have perseverance; - be willing to perform repetitive tasks.

Estate Agent			
General Information			
Description – what is this occupation?			
An estate agent shows and sells all types of immovable property such as houses, farms, factories, offices and workshops			
Typical Job Activities – what will I do in this occupation?			
The estate agent makes a list of properties for sale by following leads obtained from newspaper advertisements and personal contacts. Once a property is listed, you must become familiar with the property so that you can show it to potential buyers. The estate agent interviews potential buyers to determine their needs. Once a buyer has decided on buying a certain property the agent negotiates a price and terms acceptable to buyer and seller. You will also help to arrange a mortgage or other method of payment with a bank, building society or the seller. You will follow-up to ensure that the transaction runs smoothly. Once the transaction is complete, you will receive your commission.			
Related Occupations – which occupations are more or less the same?			
- Marketing manager - Salesperson - Sales representative			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
No academic standard is prescribed, a Senior Certificate but preferably a higher qualification, would provide a good background. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Languages, Economics, Business Economics, Accounting			
Entry to Work Place			
IN-SERVICE TRAINING: In-service training is offered by most larger estate agencies. ADDITIONAL TRAINING: The following organisations offer training: Institute of Estate Agents of South Africa, The National Property Academy. Comprehensive Property Services (CPS) provide computer training for those in the property industry. ADDITIONAL REQUIREMENTS: All estate agents must be registered with the Estate Agents Board.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An estate agent should: - have a flair for business; - be enthusiastic, persuasive and persistent; - be disciplined and motivated; - get along well with people and have a sound knowledge of human nature; - have a pleasant personality; - be tactful, patient and honest; - be in good health and have a neat, well-groomed appearance; - have a good memory; - have a knowledge of the community in which they work; - be able to handle disappointment (reward lies in the success of the transaction with registration).

Events Organiser			
General Information			
Description – what is this occupation?			
The events organiser plans, sets up and organises events such as conferences/exhibitions for firms, institutions and professional organisations.			
Typical Job Activities – what will I do in this occupation?			
You may organise public events such as agricultural/horticultural shows, antique and toy fairs, motor, caravan and boat shows etc. You may also organise specific events such as company days, which may include team-building activities. This may involve outdoor challenges in an unfamiliar terrain such as orienteering or adventure trips. The events organiser selects and books a suitable venue, sends out information and reserves accommodation for participants. You will be responsible for the catering, reception facilities and specialist equipment for each event. For example, a conference may require microphones, photocopying-, video- and computer facilities. You may also have to arrange speakers, media coverage and transport. The events organiser checks all details and liaises with venue staff to ensure that the event runs smoothly. You will supervise the health and safety requirements of each event and ensure that visitors can leave the event quickly and safely if necessary.

Explosives Technologist			
General Information			
Description – what is this occupation?			
The explosives technologist is the person who manufactures, examines and tests commercial and military explosives.			
Typical Job Activities – what will I do in this occupation?			
You may, for example, have the responsibility for the demolition of a building, using explosives. The explosives technologist in the manufacturing industry is responsible for the planning of production plants, processes and analytical methods for the manufacture of explosives. You will prepare a scale model of the envisaged plant, plan it in the finest detail and specify processes. In the laboratory routine analytical processes and development take place. Raw material is first analysed, then the technologist ensures that production goes according to plan and final products measure up to expectations. Research is done to develop new techniques, processes and products. If these are accepted, the technologist draws up specifications for their implementation.			
Related Occupations – which occupations are more or less the same?			
- Chemical engineer - Electronics engineer - Geologist - Mining engineer - Nuclear physicist - Physicist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate for a diploma course. Grade 10 Certificate for a certificate course. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: None			
Entry to Work Place			
A Certificate in Surface Blasting Technology is also an option. This course enables the student to obtain an official blasting licence to enable him to conduct blasting operations in the civil industry.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
An explosives technologist should: - be meticulously accurate; - be scientifically and practically inclined; - take responsibilities; - have integrity; - be conscientious.

Extraction Metallurgist			
General Information			
Description – what is this occupation?			
Metallurgy combines the sciences of chemistry, physics and mathematics with basic engineering principles, so as to concentrate, extract, refine and manufacture metals. The primary function of an extraction metallurgist is to extract valuable metals from the ores in which they are deposited.			
Typical Job Activities – what will I do in this occupation?			
Often only a tiny amount of the precious metal is deposited in the ore. The extraction metallurgist is expected to remove all of the metal in an efficient and economical way. You will select an extraction process according to the structures and properties of the metals.			
The work of an extraction metallurgist entails: - Ore preparation where the extraction and separation processes are based on the chemical and physical properties of the material such as density, size, magnetic properties, etc. - Pyrometallurgy, which makes use of heating and smelting of materials in order to perform extractions. - Hydrometallurgy whereby metals are extracted in solution. The extraction metallurgist constantly investigates methods of improving metallurgical extraction processes.			
Related Occupations – which occupations are more or less the same?			
- Assayer and sampler - Engineering geologist - Metallurgical engineer - Metallurgical engineering technician - Mineralogist - Mine surveyor - Mining engineer - Technical sales representative in the metal industry			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma course. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: None			
Entry to Work Place			
Applicable qualification			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

An extraction metallurgist should: - have mathematical and scientific aptitude; - think logically; - be interested in science and technology; - be motivated; - be able to solve problems.

Facilities Manager			
General Information			
Description – what is this occupation?			
The facilities manager keeps buildings and their services running effectively and maintains a safe and efficient environment.			
Typical Job Activities – what will I do in this occupation?			
Your duties will vary. It can include the development of an organisation's property strategy, ensuring that buildings are properly maintained. You will advise on health and safety issues, energy efficiency and the best use of space. You will control budgets, spending and keep accounts. You may be responsible for purchasing, selling or renting property for the organisation, or advising on relocation to another area. Increasingly, many organisations are leaving the running of facilities and related services, to a specialist facilities management company. You may therefore be involved in tendering to run facilities for public or private organisations.			
Related Occupations – which occupations are more or less the same?

Farmer			
General Information			
Description – what is this occupation?			
The farmer combines agricultural and business methods in operating a small or large farm. Your objective will be to run the farm professionally and to make sure that it is both productive and profitable.			
Typical Job Activities – what will I do in this occupation?			
The nature of the work differs according to the type of farming. The topography, climate and vegetation of an area determine the type of farming practised. On a small farm the farmer may perform the actual labour and also plan and direct the farming operations. With crop farming the farmer performs a wide range of duties, such as determining land use, planting, fertilising, spraying, cultivating, harvesting and marketing. On a livestock farm the farmer takes care of animals. The correct breeding or incubation programme as well as feeding programme should be followed. Pastures should be planned and controlled in such a way that enough grazing will be available for the animals. Animals must also be vaccinated against illnesses. Wool, meat and dairy products must be processed and marketed. The farmer evaluates existing practices as well as suggestions for improvement. Financial records are maintained, supplies are bought, labour requirements are determined and workers are hired and supervised.			
Related Occupations – which occupations are more or less the same?			
- Agricultural engineer - Agricultural extension officer - Agricultural development technician - Agricultural inspector - Farm foreman/manager - Fish and game warden - Flower farmer - Forester - Hunter			
Educational Requirements - which qualifications do I need to enter this occupation?

Fashion Artist			
General Information			
Description – what is this occupation?			
The fashion artist is a commercial artist who creates clothing advertisements for newspapers, magazines and television spots.			
Typical Job Activities – what will I do in this occupation?			
The fashion artist illustrates brochures, pamphlets and catalogues. You will sketch the new fashions shown in photographs or worn by mannequins or live models in such a way as to attract the attention of readers or viewers and stimulate their interest in purchasing the garment. The fashion artist must pay special attention to small details that may easily be overlooked, since these are the very things that may make the garment more attractive to the buying public. Since you are constantly striving to see fashion in original and interesting ways you will often work with advertising professionals to develop new promotional approaches.			
Related Occupations – which occupations are more or less the same?			
- Animator - Art teacher - Book illustrator - Cartoonist - Choreographer - Clothing designer - Colour consultant - Commercial artist - Costume designer - Exhibition designer - Graphic designer - Industrial designer - Interior designer - Lithographic artist - Scenery designer - Textile designer

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like to be physical active

Fence Erector			
General Information			
Description – what is this occupation?			
The fence erector puts up different types of fences wherever they are required such as around houses, schools, colleges and universities, sports grounds, factories, fields, prisons, airports, roads and motorways, forests and parkland.			
Typical Job Activities – what will I do in this occupation?			
You may specialise in one or more types of fencing or otherwise you will need to be experienced in many different constructions such as light and high security fencing or panel and domestic fencing, stock fencing or vehicle and motorway safety fencing. You will dig holes to the correct depth and erect concrete, timber or metal posts. You will then make sure the posts are straight and fill the holes, often with concrete. You will fix fences using bolts, plastic, wire, rail or chain. You will hang gates in fences. The fence erector uses a number of different tools and you may have to use a mechanical digger. You will furthermore need to be aware of the environment and current planning regulations including public pathways and tree preservation orders, as well as health and safety regulations.			
Related Occupations – which occupations are more or less the same?

Fibreglass Worker/Laminator			
General Information			
Description – what is this occupation?			
The fibreglass worker/laminator manufactures articles from fibreglass mixed with resin. Sectional buildings, bathroom units, tanks, pipes, canopies and bodies for vehicles and swimming pools are manufactured by the fibreglass worker.			
Typical Job Activities – what will I do in this occupation?			
Most of these products are made of fibreglass because it offers a high resistance to rust and corrosion. The fibreglass worker: - manufactures forms, models or moulds - treats the form or mould with a releasing agent to prevent the product from sticking - applies successive layers of polyester resin with a brush or spray-gun until the required thickness is obtained - allows the product to dry and cure - releases the product from the mould - sandpapers, washes and polishes it where necessary. The fibreglass worker also manufactures and fits wooden and metal beams for reinforcing cabins for pleasure craft and boats. As a fibreglass worker you must take special care to protect yourself from the fibreglass and resin which are difficult to remove from skin and clothing. You must wear gloves, an apron and a facemask at all times. The facemask also protects your lungs from the fibreglass particles which can be damaging to your health.			
Related Occupations – which occupations are more or less the same?			
- Automotive body builder - Carpenter - Instrument maker - Joiner - Pattern-maker - Plastics technologist - Scientific glass blower - Trimmer			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
No specific requirements. Senior Certificate for a diploma course. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Mathematics, Physical Science			
Entry to Work Place			
IN-SERVICE TRAINING: The candidate learns his trade on the job. Course is usually 3 to 6 months.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low

A fibreglass worker should: - have manual dexterity; - be healthy; - have good eye-hand co-ordination; - have good form perception; - be able to read plans and make calculations; - have a certain amount of technical ability; - work with his hands and with different materials.

Film and Video Producer			
General Information			
Description – what is this occupation?			
The film and video producer plans and co-ordinates the practical organisational aspects of a film or video.			
Typical Job Activities – what will I do in this occupation?			
The film and video producer: - sets up auditions for actors and controls the securing of costumes, props and other equipment - co-ordinates the sound, scenes, music, camera work, timing and modifications to the script - instructs the actors and crew regarding the time-table and rehearsals and sees that the production runs to schedule - ensures that the production does not run over budget - negotiates staff contracts, authorises the payment of salaries and arranges publicity for the production. Essentially the film and video producer frees the director to concentrate on the artistic aspects of the film (the two occupations are complementary).			
Related Occupations – which occupations are more or less the same?			
- Advertising copy-writer - Art editor and critic - Journalist - Playwright - Script-writer - Television producer

Financial and Investment Manager			
General Information			
Description – what is this occupation?			
A financial manager is responsible for managing and controlling the financial matters of a company.			
Typical Job Activities – what will I do in this occupation?			
In large corporations you will oversee the functions of financial employees appointed to take care of specific aspects of the financial division, but in smaller companies you will be responsible for performing all the tasks yourself. The duties of a financial manager include: - regular evaluation of the company's performance against budgets and targets - drawing up budgets - submitting the company's tax returns - recording, analysing and interpreting financial information relating to the company - regularly updating senior management and reporting financial problems immediately so that suitable strategies can be devised to avoid disaster. The investment manager is responsible for finding the best possible way of investing the company's money and other such assets. These could be shares in the stock market, property, artwork or some other type of investment. A great deal of administrative work is involved, and in a large corporation it will be the responsibility of a company secretary.. The duties of the financial and investment manager are so closely linked that the tasks are normally combined in smaller companies.			
Related Occupations – which occupations are more or less the same?			
- Accountant - Actuary - Asset manager - Auditor - Budget officer - Chartered accountant - Insurance consultant - Pension consultant - Portfolio manager - Real-estate advisor - Stockbroker			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a university course. Senior Certificate for the technikon and private-college courses. COMPULSORY SUBJECTS: Mathematics, Accountancy RECOMMENDED SUBJECTS: Business Economics, Economics			

Entry to Work Place			
Larger companies will only appoint a chartered accountant in this position. The training requirement for this is: - BCom (Accounting) at any university in South Africa - 3 year full-time; - BCom Honours (Accounting) - 1 year full-time; - a certificate in theory of accountancy (CTA) - a CTA is equal to an Honours degree and means an additional year of study; - enter into articles of clerkship for 3 years with a firm of accountants in public practice; - write the final examination set by the Public Accountants and Auditors Board - this is compulsory for all chartered accountants; - pass the Final Qualifying Examination (FQE) set by the Public Accountants and Auditors Board and serve the period of articles; - apply to the South African Institute of Chartered Accountants for membership.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A financial and investment manager should: - have an aptitude for Mathematics and Accountancy; - be accurate; - have an eye for numerical detail; - act carefully (weigh up alternatives); - take good care of his employer's money and assets and ensure that they are optimally utilised; - possess the necessary integrity and maturity for such a responsibility.

Fireman			
General Information			
Description – what is this occupation?			
The fireman protects life and property from fire and attempts to prevent the outbreak of fires. You will also provide assistance in the event of a disaster such as an earthquake, train derailment, vehicle accident, flood and so forth.			
Typical Job Activities – what will I do in this occupation?			
Procedures for extinguishing fires or for handling disasters such as vehicle accidents are mostly planned and practised beforehand. However, upon arrival at the scene it remains necessary to decide upon suitable techniques, for instance whether to use water hoses or chemicals to extinguish a fire. A fireman also carries out routine tasks such as cleaning fire engines, polishing equipment and working in the radio room. You will have to give lectures, demonstrations and practical training sessions. The prevention of fires is also an important part of the work. A fireman has to inspect buildings and approve fire-prevention devices. A fireman employed at an airport provides effective fire protection for aeroplanes and buildings and also performs specialised emergency and rescue services.

Fireworks Display Artist			
General Information			
Description – what is this occupation?			
Fire works display artists, also known as pyrotechnicians, give firework shows at functions, parties and special occasions.			
Typical Job Activities – what will I do in this occupation?			
They need to ensure that they are conducting a safe show, as fireworks can be very dangerous. Firework display artists promote the sale and production of good quality fireworks. They combine education with science in order to give a spectacular show. Every year, fireworks display artists gather at the PGI (Pyrotechnics Guild International) where they share experiments, information, process and formulas. These meetings feature seminars, lectures, video representations and demonstrations. Commercial products used by firework display artists are time fuses, black powder, electric matches, roundshell castings, cardboard discs, cylinders and tubes. Firework display artists have various ranks: beginner, novice, intermediate, advanced and exhibition. Ground displays produce primary effects that begin on the ground, e.g. fountains, wheels, waterfalls, rockets, etc.			
Related Occupations – which occupations are more or less the same?

The need is determined by government	The need is determined by the consumers	The need is determined by private companies	The need is determined by new technology	I can start a business in this field or with these skills	The job is fairly stable	The job is ideal for becoming a general manager
I can be of service to people	I can work with my hands	I can design things	I can repair things	I can work with technology	I can create new things	I'll be able to learn new things on an ongoing basis
I can work with languages	I can work with people	I can make more money than the average person	I can do practical work and I do not have to study theories	I can study for a number of years and face intellectual challenges	Minimum or no qualifications are required	I can work for myself
I can work flexible hours	I can entertain people	I can work internationally	I can determine my own income	I am very interested in a specific subject or field	I can progress in the business world	I do not have to struggle with finding vacancies
I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like to be physical active

Fitter and Turner			
General Information			
Description – what is this occupation?			
A fitter and turner manufactures, constructs, assembles and fits components for machinery, vehicles, installations and other apparatus or articles.			
Typical Job Activities – what will I do in this occupation?			
The fitter and turner: - selects and marks off the material required according to exact measurements on blueprints, drawings or a model - shapes the rough piece of metal into its final form with power-operated tools such as lathes, milling, drilling and planning machines - fits the parts to complete the machine or article required - inspects and tests the final assembly for true fit. The fitter and turner is a highly skilled craftsman whose trade is essential to most industries.			
Related Occupations – which occupations are more or less the same?			
- Aircraft assembler - Aircraft engine fitter - Aircraft instrument mechanic - Airframe fitter - Armature winder - Automotive machinist - Motor Mechanic			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 9 Certificate. Some employers prefer higher qualifications. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Trade Theory, Mathematics, Metalwork, Technical Drawing			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a fitter and turner you need to register with an employer providing suitable training. - Theoretical training: At a technical(FET) college or a correspondence course at Technisa up to N6 level. - Practical training: At an accredited training centre. - In-service training: Under supervision of a qualified tradesman. - Duration of course: 4 years but it can be completed in a shorter period provided that the candidate has higher educational qualifications. - Final examination: A compulsory trade test set by the Department of Labour to qualify as an artisan. ADDITIONAL REQUIREMENTS: If you want to become a fitter and turner you must be at least 16 years old. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A fitter and turner should: - be meticulously accurate; - enjoy working with his hands; - be practical; - have mathematical aptitude; - be patient and even-tempered when setting up a machine and watching the machine while the turning is in progress; - concentrate under noisy working conditions; - be responsible; - be able to read three-dimensional drawings.

Flight Engineer			
General Information			
Description – what is this occupation?			
A flight engineer assists the pilot and co-pilot on large aircraft by monitoring and operating many of the instruments and systems and watching for other aircraft.			
Typical Job Activities – what will I do in this occupation?			
You will carry out minor repairs and adjustments before take-off, while the aircraft is in flight and after landing to ensure the constant safety of the aircraft. Before take-off the flight engineer carries out safety checks against a pre-flight check list. These checks include: - inspecting for fuel or oil leaks - checking for electrical, hydraulic or pressurisation system malfunctions - verifying that passengers, freight and fuel do not exceed the weight limitations, and that the weight is evenly distributed. While the aircraft is in flight the flight engineer needs to focus on the following tasks: - monitoring fuel gauges and calculating the rate of fuel consumption - keeping a log of fuel consumption and engine performance - monitoring aircraft speed - maintaining cabin temperature - carrying out minor repairs - taking emergency measures in the case of equipment failure - logging repairs that were not corrected during flight and reporting these to the ground crew on landing.			
Related Occupations – which occupations are more or less the same?			
- Aeronautical engineer - Aircraft avionician - Aircraft radar- and radiotrician - Aircraft mechanic - Air-traffic controller - Cabin attendant - Navigator			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 10 Certificate. Senior Certificate is recommended. COMPULSORY SUBJECTS: Mathematics, Physical Science RECOMMENDED SUBJECTS: Geography			

Entry to Work Place			
SOUTH AFRICAN AIRWAYS (SAA): Practical and theoretical training at Johannesburg International Airport. The programme proceeds as follows: - Medical flight test. - Examination set by Civil Aviation Authority on air navigation regulations and general knowledge of aeroplanes ("O" license). - The successful candidate starts a 6 week training programme as flight engineer on a specific aeroplane: The course covers technical aspects of the aeroplane, operational and emergency procedures and flight planning. - Serves a 1 year period with a restricted licence and accompaniment by a qualified flight engineer. - 40 hours of simulator training followed by a test. - Allowed to fly on certain routes and must complete 50 hours on each type of aeroplane. - Test followed by exemption of temporary licence. - Proficiency check every 6 months in the simulator and medical test every 12 months.

Florist			
General Information			
Description – what is this occupation?			
A florist creates floral and plant arrangements to meet customers' needs. You must know the names and lasting qualities of flowers and the growing needs of plants.			
Typical Job Activities – what will I do in this occupation?			
A florist consults with individuals planning weddings, parties and special events. You will advise customers on the care of flowers and plants. You may work from an order which specifies exact colour, flower type and price, or you may be allowed to use your own discretion. Depending on the size of the shop, a florist may also sell items on hand, take and forward orders, carry out clerical and bookkeeping tasks and prepare accessories for the coming season. Some florists manage their own shops. A florist is also responsible for the delivery of flower arrangements or bouquets and must ensure that the delivery is made to the right customer at the right time.			
Related Occupations – which occupations are more or less the same?

Food Service Manager			
General Information			
Description – what is this occupation?			
The primary function of a food service manager is to manage the process of serving food to a large number of people.			
Typical Job Activities – what will I do in this occupation?			
You will motivate a large team of workers to work quickly and efficiently to produce food that is tasty, attractively served and prepared according to hygienic standards. Although as a food service manager you are not a chef (you manage the process of food preparation), you should be prepared to roll up your sleeves and help out when things get hectic. The duties of a food service manager cover a wide range, depending on the sector of the industry in which you are employed: - A hospital would require modification of menus to suit certain diets. - A school canteen may require recipes to be standardised. - Restaurants require menu planning and analysis. The food service manager's responsibilities include setting up supplier relationships and ordering and storing food. Financial control and administration are important in this line of work e.g. financial control of the food products and the wages of the kitchen staff. Another important aspect of the job is the food service manager's ability to deal with people effectively e.g. handling staff problems and dealing with dissatisfied customers.			
Related Occupations – which occupations are more or less the same?			
- Assistant hotel manager - Conference manager - Chef - Food and beverage manager - Health services administrator - Hotel manager - Resort manager - Restaurant/catering manager - Retail store manager			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Senior Certificate with matric exemption for a degree course. Senior Certificate for a diploma course. Grade 9 Certificate and a minimum age of 16 years for a technical(FET) college course. COMPULSORY SUBJECTS: Mathematics RECOMMENDED SUBJECTS: Physical Science, Biology, Home Economics			
Entry to Work Place			

What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A food service manager should: - be self-disciplined; - have initiative and leadership qualities; - motivate and direct a team of workers; - have good communication skills; - be able to cope with crises effectively; - have a well-groomed appearance (because of the regular contact with the public); - be able to cope with the pressure of peak times; - be able to deal effectively with rude or unhappy customers and uncooperative kitchen staff.

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like to be physical active

Frame-maker			
General Information			
Description – what is this occupation?			
A frame-maker is involved in the building and repairing of wooden cabinets, beds, couches, chairs and other high grade furniture.			
Typical Job Activities – what will I do in this occupation?			
You will be responsible for the design, building and repair of sturdy frames to be used in the mentioned products. Great emphasis is placed on the engineering of such frames. The work of the frame-maker involves machine and handwork. You will work with wood as well as modern materials such as melamine. You may work in a workshop or on the site where cabinets have to be installed. .			
Related Occupations – which occupations are more or less the same?			
- Cabinet-maker - Carpenter - Factory manager - Furniture polisher - Joiner - Roofer - Saw operator - Shop fitter - Upholsterer - Woodcarver - Woodmachinist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 8 Certificate. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Trade Theory, Woodwork, Mathematics			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a frame-maker you need to register with an employer. All costs of successful training are borne by the employer. Wage increases during the stages of apprenticeship are dependent on the progress through the system as well as entry level. Entry levels are more practical than academic. The Furniture Industry Training Board (FITB) enables the industry to provide comprehensive training to all its employees: - Theoretical and practical training: Provided by professional trainers at one of the centres of the FITB. Progress depends on the ability to "do" rather than to "know". - Duration of course: 2 to 4 years depending on the progress of the candidate in the modular system. - Final examination: A compulsory trade test at the Centre of Trade Testing at Olifantsfontein as well as accredited training centres. ADDITIONAL REQUIREMENTS: If you want to become a frame-maker you must: - be at least 16 years old; - undergo a selection test battery. ADVANCED TRAINING: The Furniture Production Unit of the FITB in Johannesburg offers the following courses: Diploma in Furniture Production: 2 year full-time course for matriculants. Certificate in Furniture Production: 3 months course for employees already in the industry. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A frame-maker should: - work very accurately; - have good vision; - have spatial perception and a sense of proportion; - good eye-hand co-ordination; - have manual and finger dexterity; - be able to work well with or without supervision; - take pride in his work. Cabinetmakers need: - good health; - physical strength and stamina; - good vision and spatial perception; - good eye-hand co-ordination; - finger dexterity.

Fundraiser			
General Information			
Description – what is this occupation?			
Fundraisers help organisations like schools, social service and governments to raise money. They organise and plan fundraising programmes.			
Typical Job Activities – what will I do in this occupation?			
Firstly they become familiar with the private foundations and government agencies that have funds available, by contacting the foundation officials and receiving publications. They also sometimes sit in on meetings where budgets are planned and the anticipated income, budget and expenditure of the company are determined by financial officials. Fundraisers may help to find a solution when expenses and funding plans do not meet. They search for the best possible funding source and write funding proposals. Non-profit organisations have their own executives, who approve or reject a proposal. It is the fundraiser's responsibility to follow up on the proposal and meet with the foundation representatives if they feel necessary. Fundraisers in a sense act as project managers.			
Related Occupations – which occupations are more or less the same?

Funeral Director			
General Information			
Description – what is this occupation?			
The main function of a funeral director, also known as an undertaker or mortician, is to arrange and direct funeral services.			
Typical Job Activities – what will I do in this occupation?			
Bereaved families turn to the funeral director to relieve themselves of the numerous tasks involved in arranging a funeral. The funeral director in turn, must ensure that matters run smoothly. The funeral director is responsible for the following tasks: - collection of the body from the place of death for transfer to the mortuary (some undertakers offer a 24 hour service) - placing the body in a cool-chamber taking special precautions in case of death due to contagious diseases - helping the bereaved family to choose a coffin - arranges for the issuing of a death-certificate by the Department of Home Affairs - placing funeral notices in newspapers - compiling a programme for the funeral - embalming if required - dressing the corps according to the wishes of the family or cultural requirements - making of payments (cemetery fees, florists, etc.) on behalf of the family - attending the ceremony - ensuring the safe movement of the funeral procession. The funeral director is responsible for all the paper work involved with a death and all the logistics of the burial or cremation. The funeral director will often be called upon to arrange funeral ceremonies for different cultures and religions, so you will need to be aware of the differing requirements. Sometimes special medical and judicial stipulations also have to be considered.			
Related Occupations – which occupations are more or less the same?			
- Hospice worker - Hospital porter - Monumental mason			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 10 Certificate. Senior Certificate for diploma course. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Biblical Studies, Languages			
Entry to Work Place			
IN-SERVICE TRAINING: In-service training (3 years) are offered by most funeral services companies and covers all aspects of funeral directing.			

What level of natural skill and/or aptitude do I need for this occupation?				
Exceptionally High	High	Moderate	Low	
A funeral director should: - have composure; - be able to communicate easily with people; - comfort people in their time of sorrow; - be firm but tactful in making decisions; - be responsible; - have integrity; - have organisational abilities; - dress conservatively out of respect for the grieving families; - work unusual hours; - learn and observe different religious customs.

I can apply my special skills	I can communicate and interact with people	I can work on my own without interacting too much with people	I'll work fixed hours	I like to work with nature	I like to work with animals	I like to be physical active

Furniture Worker			
General Information			
Description – what is this occupation?			
Wood forms an important component of the building industry. The extensive introduction of machinery and equipment into the furniture industry has changed the traditional role of the tradesman in this field.			
Typical Job Activities – what will I do in this occupation?			
Most of the work is done mechanically under the supervision of an experienced worker but knowledge of the skills to design and create is still needed. The furniture industry offers a variety of occupations for people who love to work with wood: - Wood machinist: Processes timber, using a variety of machinery, into the parts needed to make furniture. - Cabinet-maker: Uses the parts made by the wood machinist to make up furniture. - Frame-maker: Makes frames for upholstered couches and chairs. - Woodcarver: Uses his artistic ability as well as his knowledge of the properties of wood to carve designs into furniture, raised figures or ornate features such as ball-and-claw legs. - Furniture polisher: Applies protective and decorative sealants, polishes and lacquers to the furniture. - Upholsterer: Takes care of the soft-furnishing side of sofas and chairs. Fills in the frames with springs and various filling materials and covers the furniture with suitable upholstery material.			
Related Occupations – which occupations are more or less the same?			
- Cabinet-maker - Carpenter - Factory manager - Frame-maker - Furniture polisher - Joiner - Saw operator - Shop fitter - Upholsterer - Woodcarver - Woodmachinist			
Educational Requirements - which qualifications do I need to enter this occupation?			
Exceptionally High 4-7 years University/ Technikon Studies	High 3-4 years University/ Technikon Studies	Moderate 1-3 Years FET or practical training	Low One year or less or on the job training
Entry to Tertiary or Further Studies			
Grade 8 Certificate. COMPULSORY SUBJECTS: None RECOMMENDED SUBJECTS: Trade Theory, Woodwork, Mathematics			

Entry to Work Place			
APPRENTICESHIP TRAINING: If you want to become a furniture worker you need to register with an employer. All costs of successful training are borne by the employer. Wage increases during the stages of apprenticeship are dependent on the progress through the system as well as entry level. Entry levels are more practical than academic. The Furniture Industry Training Board (FITB) enables the industry to provide comprehensive training to all its employees: - Theoretical and practical training: Provided by professional trainers at one of the centres of the FITB. Progress depends on the ability to "do" rather than to "know". - Duration of course: 2 to 4 years depending on the progress of the candidate in the modular system. - Final examination: A compulsory trade test at the Centre of Trade Testing at Olifantsfontein as well as accredited training centres. ADDITIONAL REQUIREMENTS: If you want to become a furniture worker you must: - be at least 16 years old; - undergo a selection test battery. ADVANCED TRAINING: The Furniture Production Unit of the FITB in Johannesburg offers the following courses: Diploma in Furniture Production: 2 year full-time course for matriculants. Certificate in Furniture Production: 3 months course for employees already in the industry. NOTE: Changes in the training of artisans are subject to the official approval of the Registrar of Labour Training. A new system of apprenticeship training will be introduced within the next few years. Each industry will make use of its own methods and time to implement the system.			
What level of natural skill and/or aptitude do I need for this occupation?			
Exceptionally High	High	Moderate	Low
A furniture worker should: - have a technical and practical orientation; - be a precise and accurate worker; - have manual dexterity; - have good eye-hand co-ordination; - have a passion for working with wood; - be dedicated to his work.			
Employment Indicators – what are the important employment facts regarding this occupation

Geneticist			
General Information			
Description – what is this occupation?			
The geneticist studies the genetic composition of living organisms (plants, animals and humans) to try to explain how genetic traits is transmitted from one generation to the next.			
Typical Job Activities – what will I do in this occupation?			
The study of genetics can be sub-divided into different fields: - The qualities and behaviour of chromosomes are studied in cytogenetics. - The molecular functioning of genetic material is studied in molecular genetics and this information is used to change genes for commercial (especially agricultural and medical) purposes. - In the field of population genetics and plant and animal breeding, the geneticist predicts the outcome of cross-breeding different animals and plant types. - Better knowledge of human genetics and the molecular nature of defective genes makes diagnoses and prevention of genetically associated diseases easier. The geneticist often performs laboratory work, but also works outdoors (plant breeding). Computer and mathematical analyses in population studies and breeding are done. In the human, plant and animal fields the geneticist performs diagnostic work.
